Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 April 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 April 2013
Global end of trial reached?	Yes
Global end of trial date	05 November 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of this study were:

- To assess the objective response rate (ORR) (complete response + partial response [CR + PR]) of lenvatinib in subjects with unresectable Stage III or Stage IV melanoma not harboring the V600E BRAF mutation and disease progression following up to 2 prior systemic anticancer regimens for unresectable Stage III or Stage IV melanoma (Cohort 1).
- To assess the ORR of lenvatinib in subjects with unresectable Stage III or Stage IV melanoma harboring the activating BRAF mutations (mainly the V600E mutation) and disease progression following BRAF V600E-targeted therapy (Cohort 2).

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following:

- Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008)
- International Conference on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Conference on Harmonisation of Pharmaceuticals for Human Use
- Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312
- European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states.
- Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 August 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Germany: 28
Country: Number of subjects enrolled	United States: 116
Country: Number of subjects enrolled	Australia: 30

Worldwide total number of subjects	182
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	115
From 65 to 84 years	67
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at a total of 40 sites in Australia, Germany, United Kingdom, and United States.

Pre-assignment

Screening details:

A total of 298 participants were screened. Of these, 116 were screen failures and 182 received treatment (93 participants in Cohort 1 and 89 participants in Cohort 2). Out of the 116 screen failures, 97 participants fail to meet the inclusion/exclusion criteria, 11 withdrew consent, and 8 were excluded for other reasons.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 (V600E BRAF negative)

Arm description:

Cohort 1 (V600E BRAF negative) enrolled participants not harboring the V600E BRAF mutation with disease progression following up to 2 prior systemic anticancer regimens excluding anti-vascular endothelial growth factor (anti-VEGF) for unresectable Stage III or Stage IV melanoma. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles.

Arm type	Experimental
Investigational medicinal product name	Lenvatinib
Investigational medicinal product code	E7080
Other name	Lenvima
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

24 mg lenvatinib, once daily (two 10-mg capsules and one 4-mg capsule) was administered at approximately the same time in the morning without regard to food intake for 28 days from Cycle 1 onward. If a dose was missed, it was to be taken within the 12 hours following the usual time of the morning dose. If more than 12 hours had elapsed from the time of the usual daily dose, lenvatinib was to be taken the next day at the usual time in the morning. If in the event a participant vomited after study drug administration, they were not to take another dose until the next scheduled dose.

Arm title	Cohort 2 (V600E BRAF positive)
------------------	--------------------------------

Arm description:

Cohort 2 (V600E BRAF positive) enrolled participants harboring the activating BRAF mutations (mainly the V600E mutation) with disease progression following BRAF V600E-targeted therapy. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles. In addition to BRAF V600E-targeted therapy, participants may have received up to 2 prior systemic anticancer regimens (including immunotherapies but excluding anti-vascular endothelial growth factor (anti-VEGF) therapies) for unresectable Stage III or Stage IV disease.

Arm type	Experimental
Investigational medicinal product name	Lenvatinib
Investigational medicinal product code	
Other name	Lenvima, E7080
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

24 mg lenvatinib, once daily (two 10-mg capsules and one 4-mg capsule) was administered at approximately the same time in the morning without regard to food intake for 28 days from Cycle 1 onward. If a dose was missed, it was to be taken within the 12 hours following the usual time of the morning dose. If more than 12 hours had elapsed from the time of the usual daily dose, lenvatinib was to be taken the next day at the usual time in the morning. If in the event a participant vomited after study drug administration, they were not to take another dose until the next scheduled dose.

Number of subjects in period 1	Cohort 1 (V600E BRAF negative)	Cohort 2 (V600E BRAF positive)
Started	93	89
Completed	69	62
Not completed	24	27
Clinical progression	3	5
Participant choice	8	3
Consent withdrawn by subject	1	2
Increase in lesion size	-	2
Radiation	1	-
Adverse event, non-fatal	9	12
Non-compliance	1	-
Diagnosis of second primary cancer	-	1
Investigator's choice	1	1
Lost to follow-up	-	1

End points

End points reporting groups

Reporting group title	Cohort 1 (V600E BRAF negative)
Reporting group description: Cohort 1 (V600E BRAF negative) enrolled participants not harboring the V600E BRAF mutation with disease progression following up to 2 prior systemic anticancer regimens excluding anti-vascular endothelial growth factor (anti-VEGF) for unresectable Stage III or Stage IV melanoma. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles.	
Reporting group title	Cohort 2 (V600E BRAF positive)
Reporting group description: Cohort 2 (V600E BRAF positive) enrolled participants harboring the activating BRAF mutations (mainly the V600E mutation) with disease progression following BRAF V600E-targeted therapy. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles. In addition to BRAF V600E-targeted therapy, participants may have received up to 2 prior systemic anticancer regimens (including immunotherapies but excluding anti-vascular endothelial growth factor (anti-VEGF) therapies) for unresectable Stage III or Stage IV disease.	

Primary: Objective Response Rate (ORR)

End point title	Objective Response Rate (ORR) ^[1]
End point description: ORR, (ORR = CR + PR) was defined as the percentage of participants in each cohort who had a best overall response (BOR) of complete response (CR) or partial response (PR) based on Response Evaluation Criteria In Solid Tumors (RECIST) v1.1 for target lesions assessed by magnetic resonance imaging/computed tomography (MRI/CT) scans and independent radiologic review (IRR). A BOR of CR required confirmation by a subsequent CR assessment at least 4 weeks later. A BOR of PR required confirmation by a subsequent assessment of CR or PR at least 4 weeks later. CR was defined as the disappearance of all target lesions. Any pathological lymph nodes (target or non-target) had to have a reduction in short axis to less than 10 millimeters. PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. The Full Analysis Set (Intent-to-Treat [ITT] Analysis Set) included all participants who received at least 1 dose lenvatinib.	
End point type	Primary
End point timeframe: From date of first dose of study drug until all participants completed a minimum of 6 cycles (28-day cycles) or discontinued treatment prior to end of Cycle 6 by the date of data cutoff (15 Jan 2012 and 15 Apr 2013 for Cohort 1 and Cohort 2, respectively)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: For each cohort, the null hypothesis that ORR is $\leq 10\%$ was tested against the alternative hypothesis of an ORR $\geq 20\%$, using the 1-sample exact test of a single proportion, at the 1-sided 0.05 level. ORR is shown with corresponding 2-sided, exact binomial 95% confidence interval. Statistical results are found in the table for ORR with 95% CI.

End point values	Cohort 1 (V600E BRAF negative)	Cohort 2 (V600E BRAF positive)		
Subject group type	Reporting group	Reporting group

Secondary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS was measured as the time from the date of first administration of study treatment until the date of first documentation of disease progression or date of death from any cause (whichever occurred first), as determined by IRR and Investigator based on RECIST v1.1. Disease progression per RECIST v1.1 was defined as at least a 20% relative increase and 5 mm absolute increase in the sum of diameters of target lesions (taking as reference the smallest sum on study) recorded since the treatment started or the appearance of 1 or more new lesions. PFS was analyzed using Kaplan-Meier (1958) product-limit estimates. Data were presented with 2-sided 95% CI when an adequate number of at risk participants warranted the estimates in the table below. The Full Analysis Set (ITT Analysis Set) was used and included all participants who received at least 1 dose lenvatinib.

End point type	Secondary
----------------	-----------

End point timeframe:

From date of first dose of study drug until documentation of disease progression or death from any cause (whichever occurred first) or up to data cutoff (15 Jan 2012 and 15 Apr 2013 for Cohort 1 and Cohort 2, respectively), up to approximately 2.9 years

End point values	Cohort 1 (V600E BRAF negative)	Cohort 2 (V600E BRAF positive)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	93	89		
Units: Months

Number of subjects analysed	93	89		
Units: Months				
median (confidence interval 95%)	8.9 (8.3 to 99999)	6.3 (5.2 to 8.8)		

Statistical analyses

No statistical analyses for this end point

Secondary: Disease Control Rate (DCR)

End point title	Disease Control Rate (DCR)
-----------------	----------------------------

End point description:

DCR, (DCR = CR + PR + SD) was defined as the percentage of participants who had a BOR of CR or PR or stable disease (SD). To be assigned a BOR of SD, the time from the first administration of study drug until the date of documented SD needed to be greater than or equal to seven weeks based on IRR and Investigator's assessment. The Full Analysis Set (ITT Analysis Set) was used and included all participants who received at least 1 dose lenvatinib.

End point type	Secondary
----------------	-----------

End point timeframe:

From date of first dose of study drug until documentation of disease progression or death from any cause (whichever occurred first) or up to data cutoff (15 Jan 2012 and 15 Apr 2013 for Cohort 1 and Cohort 2, respectively), up to approximately 2.9 years

Secondary: Summary of Plasma Concentration of Lenvatinib

End point title	Summary of Plasma Concentration of Lenvatinib
End point description:	
Blood samples for the quantification of lenvatinib in plasma were obtained and processed using a standardized protocol. The lower limit of quantification was 0.25 ng/mL. Pharmacokinetic (PK) analysis was conducted using nonlinear mixed effects modeling. Descriptive statistics were used to summarize lenvatinib plasma concentration data. The PK analysis set was used for analysis and included all participants who received at least one dose of lenvatinib and had at least one quantifiable lenvatinib concentration.	
End point type	Secondary
End point timeframe:

Statistical analyses

Secondary: Change from Baseline in the Concentration of Clinical Biomarkers in Whole Blood

End point title	Change from Baseline in the Concentration of Clinical Biomarkers in Whole Blood
-----------------	---

End point description:

Blood samples were drawn at specific time points. Utilizing a standard protocol, the deoxyribonucleic acid (DNA) from whole blood was extracted and analyzed for specific biomarkers of absorption, distribution, metabolism, and excretion of lenvatinib. Some of the biomarkers analyzed included; Epidermal Growth Factor (EGF), Fibroblast Growth Factor (FGF), FMS Like Tyrosine Kinase 3 Ligand (Flt3l) Granulocyte Colony Stimulating Factor (G-CSF), Granulocyte Macro Colony Stimulating Factor (GM-CSF), Interleukin 1 Receptor Antagonist (IL-1RA), Interferon (IFN), Macrophage Inflammatory Protein (MIP) 1 alpha, Platelet Derived Growth Factor (PDGF), Stromal Cell Derived Factor (SDF) 1 alpha, Interleukin (IL), Transforming Growth Factor (TGF), Tumor Necrosis Factor (TNF), Vascular Endothelial Growth Factor (VEGF). The Safety Analysis set was used and included all participants who received at least one dose of lenvatinib and had at least 1 postbaseline safety evaluation.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From date of administration of first dose up to 30 days after the last dose, or up to data cutoff (15 Jan 2012 and 15 Apr 2013 for Cohort 1 and Cohort 2, respectively), up to approximately 33 months.

Assessment type	Systematic

Reporting groups

Reporting group title	Cohort 1 (V600E BRAF Negative)
-----------------------	--------------------------------

Reporting group description:

Cohort 1 (V600E BRAF negative) enrolled participants not harboring the V600E BRAF mutation with disease progression following up to 2 prior systemic anticancer regimens (excluding anti-VEGF) for unresectable Stage III or Stage IV melanoma. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles.

Reporting group title	Cohort 2 (V600E BRAF Positive)
-----------------------	--------------------------------

Reporting group description:

Cohort 2 (V600E BRAF positive) enrolled participants harboring the activating BRAF mutations (mainly the V600E mutation) with disease progression following BRAF V600E-targeted therapy. Participants received lenvatinib 24 mg orally, once daily continuously in 28-day cycles.

Serious adverse events	Cohort 1 (V600E BRAF Negative)	Cohort 2 (V600E BRAF Positive)	
Total subjects affected by serious adverse events			
subjects affected / exposed	39 / 93 (41.94%)	36 / 89 (40.45%)	
number of deaths (all causes)	42	64	
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Infected neoplasm

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 January 2011	<p>1) clarified each cohort population, allowed up to 2 prior regimens for Cohort 1 and any activating BRAF mutation (mainly V600E) for Cohort 2</p> <p>2) changed study design to Simon's Optimal 2-Stage Design, which would have allowed for early termination of study if response was not sufficient</p> <p>3) provided lesion size specifications for single lesion only</p> <p>4) added criterion allowing subjects with brain metastases under specified circumstances</p> <p>5) renal function requirement updated from 30 mL/min to 40 mL/min</p> <p>6) clarified interruption/dose reduction for anemia, lymphocytopenia, and neutropenia.</p> <p>Reasons for changes: Clarified study population for each cohort regarding BRAF activating mutations and allowed number of prior anticancer therapies. Relaxing allowed number of prior treatments reflected a more contemporaneous approach regarding prior treatments a subject was exposed to for Stage III or IV unresectable melanoma. Also, amended entry criterion allowed for an improved enrollment rate without any detriment on the ability to assess the effect of lenvatinib on the 2 distinct study populations. Simon's Optimal 2-Stage Design was introduced to address questions/criticism from multiple sites and/or scientific committees/IRBs of not having means to control the study population exposure to lenvatinib in the event it was shown not to be efficacious in the study population. Entry criteria changed to allow subjects with brain metastasis under specific circumstances per the current understanding that a select population of subjects with brain metastasis (resected, asymptomatic disease and free of new metastasis) are good candidates for clinical trials and may equally benefit from participation in experimental clinical studies. Renal function requirement updated to reflect current understanding of lenvatinib potential for nephrotoxicity. Dose modification guidelines assessed more conservatively hematologic toxicities (anemia, neutropenia, lymphocytopenia) related to lenvatinib.</p>
16 March 2012	<p>Amendment 02:</p> <p>(1) Added exception to exclusion of timing of prior chemotherapy within 21 days, within 14 days allowed in subjects with rapid progression while receiving BRAF-targeted therapy.</p> <p>Reason for the change is as follows: The added language pertains to the Cohort 2 population, i.e., subjects who have a BRAF mutation and who failed a BRAF-targeted therapy. For these subjects there are no other effective treatment options and their disease is rapidly progressing once they fail the BRAF-targeted therapy.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
