

Clinical trial results:

A randomized, open label study comparing safety and efficacy parameters for a high and a low dose of ambrisentan (adjusted for body weight) for the treatment of pulmonary arterial hypertension in paediatric patients aged 8 years up to 18 years

Summary

EudraCT number	2010-019547-19
Trial protocol	GR NL HU DE ES FR IT Outside EU/EEA
Global end of trial date	12 November 2013

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000434-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 November 2013
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 November 2013
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety, tolerability, pharmacokinetics and efficacy of ambrisentan in the paediatric PAH population

Protection of trial subjects:

The independent data monitoring committee (IDMC) were involved in this study to ensure objectives such as medical and/or statistical review of safety and/or efficacy concerns in order to protect the ethical and safety interests of participants and to protect scientific validity of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 January 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	10 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Japan: 5
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	United States: 7
Country: Number of subjects enrolled	Argentina: 6
Worldwide total number of subjects	41
EEA total number of subjects	15

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	14
Adolescents (12-17 years)	27
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study investigated the safety and efficacy of a high and low dose ambrisentan (adjusted as per participants body weight) administered orally in participants aged 8 to 18 years with pulmonary arterial hypertension (PAH).

Pre-assignment

Screening details:

A total of 41 participants were enrolled and randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Low dose ambrisentan

Arm description:

Participants received ambrisentan low dose tablet either 2.5 milligram (mg) or 5 mg orally once daily for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Ambrisentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received ambrisentan low dose tablet either 2.5 mg or 5 mg orally once daily for 24 weeks.

Arm title	High dose ambrisentan
------------------	-----------------------

Arm description:

Participants received ambrisentan high dose tablet either 5 mg, 7.5 mg or 10 mg orally once daily for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Ambrisentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received ambrisentan high dose tablet either 5 mg, 7.5 mg or 10 mg orally once daily for 24 weeks.

Number of subjects in period 1	Low dose ambrisentan	High dose ambrisentan
Started	21	20
Completed	19	18
Not completed	2	2
Physician decision	1	-
Adverse event, non-fatal	1	1
Lost to follow-up	-	1

End points

End points reporting groups

Reporting group title	Low dose ambrisentan
Reporting group description:	
Participants received ambrisentan low dose tablet either 2.5 milligram (mg) or 5 mg orally once daily for 24 weeks.	
Reporting group title	High dose ambrisentan
Reporting group description:	
Participants received ambrisentan high dose tablet either 5 mg, 7.5 mg or 10 mg orally once daily for 24 weeks.	

Primary: Number of participants with treatment-emergent adverse events (AEs) and serious treatment-emergent adverse events (SAEs)

End point title	Number of participants with treatment-emergent adverse events (AEs) and serious treatment-emergent adverse events (SAEs) ^[1]
-----------------	---

End point description:

AEs defined as any untoward medical occurrence in a patient or clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAEs defined as any untoward medical occurrence that, at any dose results in death, is life threatening, requires hospitalization or prolongation of existing hospitalization, results in disability or incapacity, or is a congenital anomaly or birth defect, medical events that may not immediately life threatening or result in death or hospitalization but may jeopardize the participant or may require medical or surgical intervention as per medical or scientific judgement and events of drug-induced liver injury with hyperbilirubinaemia. Safety population comprised of all randomized participants who received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Up to 24 Weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses have been performed for this outcome measure.

Statistical analyses

No statistical analyses for this end point

Primary: Number of participants with post Baseline Potential Clinical importance (PCI) value for clinical chemistry parameters: alanine amino transferase (ALT), aspartate aminotransferase (AST), gamma glutamyl transferase (GGT), total

bilirubin and creatinine

End point title	Number of participants with post Baseline Potential Clinical importance (PCI) value for clinical chemistry parameters: alanine amino transferase (ALT), aspartate aminotransferase (AST), gamma glutamyl transferase (GGT), total bilirubin and creatinine ^[4]
-----------------	---

End point description:

Blood samples were collected from participants for analysis of following clinical chemistry parameters: ALT, AST, GGT, total bilirubin and creatinine. PCI ranges were <3 times the upper limit of normal (ULN), <34.2 Micromoles per liter (UMOL/L) for total bilirubin and <176.8 (UMOL/L) for creatinine. Only those parameters having any time post-Baseline PCI values were presented. Day 1 was considered as Baseline.

End point type	Primary
----------------	---------

End point timeframe:

Up to 24 Weeks

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Secondary: Change from Baseline in Subject Global Assessment to Week 24 using the SF-10 health survey for children

End point title	Change from Baseline in Subject Global Assessment to Week 24 using the SF-10 health survey for children
-----------------	---

End point description:

Short-form 10 (SF-10) Health Survey for Children is a 10-item parent-completed health assessment that measures physical (Items 1, 2a, 2b, 3, and 5) and psychosocial (Items 4, 6, 7, 8, and 9) functioning for children ages five and over. Each item has either 4, 5 or 6 response choices with associated point systems. An aggregated point score was generated across the 5 items within each summary score (range of 5 to 30 points for each 5-item score). This aggregated point score was then standardised and transformed to a norm-based scoring metric in accordance with the developer's guidelines. A higher value on each summary score indicates better functioning. Day 1 was considered as Baseline. Change from Baseline was calculated by subtracting Baseline value from the specified time point value.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 June 2010	<p>Amendment No. 1</p> <ul style="list-style-type: none">Clarify the inclusion criteria that existing drug treatment for pulmonary arterial hypertension (PAH) would continue unchanged throughout the study.Clarify that two forms of contraception is required only for female participants of child bearing potential who are sexually active.Expand the eligibility for the continuation study to all participants who participate in this study and in whom continued treatment with ambrisentan is desired.Specify that participants will be given a diary card to collect information about dosing and days missed from school.Remove references to "brain natriuretic peptide" and clarify that it is N-terminal pro-B-type Natriuretic Peptide that is being assessed.Add more specific references for the Tanner development criteria.Change the wording of the questions regarding days missed from school to make it clear that the total number of days missed includes the days missed because of PAH and that the days missed because of PAH are due to symptoms of PAH and do not include clinic visits.Remove the requirement for an unblinded person to enter compliance data into InForm.Allow the investigator to be unblinded to treatment for an individual patient once that participant has completed the study.
26 October 2010	<p>Amendment No. 2</p> <ul style="list-style-type: none">To clarify that it is hepatitis B surface antigen, and not hepatitis B surface antibody, that is being assessed as part of the exclusion criteria.Add the United States (US) Investigational New Drug (IND) number to the Sponsor Information Page and clarify that the medical monitor and Serious Adverse Events contact are the same person.
02 February 2011	<p>Amendment No. 3</p> <ul style="list-style-type: none">Add oestrogen to the laboratory tests being performed on female participants at all times that pubertal development assessments are performed.Remove testosterone from the laboratory tests being performed on female participants at all times that the pubertal development assessments are performed.Change the storage requirements for the study medication to store below 30°C.

Notes:
