Notes:

**Paediatric regulatory details**

| | |
|---|---|
| Is trial part of an agreed paediatric investigation plan (PIP) | Yes |
| EMA paediatric investigation plan number(s) | EMEA-000431-PIP01-08 |
| Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial? | No |
| Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial? | No |

Notes:

## Results analysis stage

| | |
|---|---|
| Analysis stage | Final |
| Date of interim/final analysis | 15 December 2011 |
| Is this the analysis of the primary completion data? | No |

| | |
|---|---|
| Global end of trial reached? | Yes |
| Global end of trial date | 19 October 2011 |
| Was the trial ended prematurely? | No |

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to compare the efficacy and safety of FF/GW642444 Inhalation Powder 100mcg/25mcg and FF 100mcg both administered once daily in the evening in adolescent and adult subjects 12 years of age and older with persistent bronchial asthma over a 12 week treatment period.

Protection of trial subjects:

The following steps were taken to protect trial subjects:
1). Only subjects meeting all of the inclusion criteria and none of the exclusion criteria were randomized to investigational medication.
2). All subjects enrolled into the study were provided rescue medication for use as necessary.
3). Subject lung function, as measured by AM and PM PEF was monitored for stability through the use of a daily electronic diary.
4) Both safety and efficacy parameters were also assessed by the investigator regularly in the clinic to minimise any potential risks to the patients.
5). The investigator or treating physician may unblind a subject's treatment assignment in the case of an emergency, when knowledge of the study treatment is essential for the appropriate clinical management or welfare of the subject.

Background therapy: -

Evidence for comparator: -

| | |
|---|---|
| Actual start date of recruitment | 20 August 2010 |
| Long term follow-up planned | No |
| Independent data monitoring committee (IDMC) involvement? | No |

Notes:

## Population of trial subjects

### Subjects enrolled per country

| | |
|---|---|
| Country: Number of subjects enrolled | Poland: 167 |
| Country: Number of subjects enrolled | Romania: 157 |
| Country: Number of subjects enrolled | Germany: 126 |
| Country: Number of subjects enrolled | United States: 363 |
| Country: Number of subjects enrolled | Ukraine: 146 |
| Country: Number of subjects enrolled | Japan: 151 |
| Worldwide total number of subjects | 1110 |
| EEA total number of subjects | 450 |

Notes:

| Subjects enrolled per age group | |
|---|---|
| In utero | 0 |
| Preterm newborn - gestational age < 37 wk | 0 |
| Newborns (0-27 days) | 0 |
| Infants and toddlers (28 days-23 months) | 0 |
| Children (2-11 years) | 0 |
| Adolescents (12-17 years) | 149 |
| Adults (18-64 years) | 865 |
| From 65 to 84 years | 96 |
| 85 years and over | 0 |

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Participants meeting eligibility criteria at the Screening visit completed a 4-week Run-in Period for Baseline safety evaluations and measures of asthma status. Participants were then randomized to a 12-week Treatment Period. 1110 participants were screened, 610 were randomized, and 609 received >=1 dose of study treatment.

### Period 1

| | |
|---|---|
| Period 1 title | Overall Study (overall period) |
| Is this the baseline period? | Yes |
| Allocation method | Randomised - controlled |
| Blinding used | Double blind |
| Roles blinded | Subject, Investigator, Monitor, Data analyst, Carer, Assessor |

### Arms

| | |
|---|---|
| Are arms mutually exclusive? | Yes |
| **Arm title** | Placebo |

Arm description:

Participants (par.) received placebo once daily (OD) in the evening from the dry powder inhaler (DPI) for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| | |
|---|---|
| Arm type | Placebo |
| Investigational medicinal product name | Placebo |
| Investigational medicinal product code | |
| Other name | |
| Pharmaceutical forms | Inhalation powder |
| Routes of administration | Inhalation use |

Dosage and administration details:

Once daily via Ellipta Device

| | |
|---|---|
| **Arm title** | FF 100 µg OD |

Arm description:

Participants received Fluticasone Furoate (FF) 100 microgram (µg) inhalation powder OD in the evening from the DPI for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| | |
|---|---|
| Arm type | Experimental |
| Investigational medicinal product name | FF |
| Investigational medicinal product code | |
| Other name | |
| Pharmaceutical forms | Inhalation powder |
| Routes of administration | Inhalation use |

Dosage and administration details:

100 µg once daily via Ellipta Device

| | |
|---|---|
| **Arm title** | FF/VI 100/25 µg OD |

Arm description:

Participants received FF/Vilanterol (VI) 100/25 µg inhalation powder OD in the evening from the DPI for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| | |

| **Number of subjects in period 1[1]** | Placebo | FF 100 µg OD | FF/VI 100/25 µg OD |
|---|---|---|---|
| Started | 203 | 205 | 201 |
| Completed | 151 | 185 | 179 |
| Not completed | 52 | 20 | 22 |
| Consent withdrawn by subject | 6 | 6 | 3 |
| Physician decision | 6 | 7 | 6 |
| Adverse event, non-fatal | 1 | - | 2 |
| Lost to follow-up | - | 1 | 2 |
| Lack of efficacy | 32 | 6 | 7 |
| Protocol deviation | 7 | - | 2 |

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.
Justification: Only those enrolled participants who received >=1 dose of study treatment are reported to be in the baseline period.

### Primary: Mean change from Baseline (BL) in clinic visit trough (pre-bronchodilator and pre-dose) forced expiratory volume in one second (FEV1) at Week 12

| | |
|---|---|
| End point title | Mean change from Baseline (BL) in clinic visit trough (pre-bronchodilator and pre-dose) forced expiratory volume in one second (FEV1) at Week 12 |
| End point description: | |
| Pulmonary function was measured by FEV1, defined as the maximal amount of air that can be forcefully exhaled in one second. Trough FEV1 is defined as the clinic visit (pre-bronchodilator and pre-dose) FEV1 measurement taken at the clinic visit while still on-treatment. Pre-dose and pre-rescue albuterol/salbutamol trough FEV1 was measured electronically by spirometry in the evening at the BL through Week 12 clinic visits. The highest of 3 technically acceptable measurements was recorded. BL was the pre-dose value obtained at Visit 3. Change from BL was calculated as the Week 12 value minus the BL value. The analysis was performed using an Analysis of Covariance (ANCOVA) model with covariates of BL trough FEV1, region, sex, age, and treatment group. The last observation carried forward (LOCF) method was used to impute missing data, in which the last non-missing post-BL on-treatment measurement at scheduled clinic visits was used to impute the missing measurements. ITT, Intent-to-Treat. | |

## Secondary: Change from Baseline in the percentage of rescue-free 24-hour (hr)

## periods during the 12-week Treatment Period

| End point title | Change from Baseline in the percentage of rescue-free 24-hour (hr) periods during the 12-week Treatment Period |
|---|---|

End point description:

The number of inhalations of rescue albuterol/salbutamol inhalation aerosol used during the day and night was recorded by the participants in a daily electronic diary (eDiary). A 24-hour (hr) period in which a participant's responses to both the morning and evening assessments indicated no use of rescue medication was considered to be rescue free. The Baseline value was derived from the last 7 days of the daily eDiary prior to the randomization of the participant. Change from Baseline was calculated as the averaged value during the 12-week Treatment Period minus the Baseline value. The analysis was performed using an ANCOVA model with covariates of Baseline, region, sex, age, and treatment group.

## Secondary: Change from Baseline in the total Asthma Quality of Life Questionnaire (AQLQ) (+12) score at Week 12/Early Withdrawal

| End point title | Change from Baseline in the total Asthma Quality of Life Questionnaire (AQLQ) (+12) score at Week 12/Early Withdrawal |
|---|---|

End point description:

The AQLQ is a disease-specific, self-administered quality of life questionnaire used to evaluate the impact of asthma treatments on the quality of life of asthma sufferers. The AQLQ for 12 years and older (AQLQ [+12]) is a modified version of the AQLQ for use in asthma patients between the age of 12 and 70. The AQLQ contains 32 items in 4 domains: activity limitation (11 items), symptoms (12 items), emotional function (5 items), and environmental stimuli (4 items). For the 32 items on the questionnaire, the response format consists of a seven-point scale, where a value of 1 indicates "total impairment" and a value of 7 indicates "no impairment." The AQLQ total score is defined as the average of the scores from all 32 questions; thus, the total score ranges from 1 (indicates "total impairment") to 7 (indicates "no impairment"). Baseline was the total score obtained at Visit 3. Change from Baseline was calculated as the total score at Week 12 minus the total score at Baseline.

## Secondary: Mean change from Baseline in daily morning (AM) peak expiratory flow (PEF) averaged over the 12-week Treatment Period

| End point title | Mean change from Baseline in daily morning (AM) peak expiratory flow (PEF) averaged over the 12-week Treatment Period |
|---|---|

End point description:

Peak Expiratory Flow (PEF) is defined as the maximum airflow during a forced expiration beginning with the lungs fully inflated. PEF was measured by the participants using a hand-held electronic peak flow meter each morning prior to the dose of study medication and any rescue albuterol/salbutamol inhalation aerosol use. Change from Baseline (defined as the last 7 days prior to randomization of the participants) was calculated as the value of the averaged daily AM PEF over the 12-week treatment period (at Week 12) minus the Baseline value. The analysis was performed using an ANCOVA model with covariates of Baseline, region, sex, age, and treatment group.

| End point type | Secondary |

## Secondary: Change from Baseline in the Asthma Control Test (ACT) score at Week 12

| End point title | Change from Baseline in the Asthma Control Test (ACT) score at Week 12 |
|---|---|

End point description:

The ACT is a 5-item questionnaire developed as a measure of the participant's asthma control. Questions are designed to be self-completed by the participant and include the following: In the past 4 weeks, "How much of the time did your asthma keep you from getting as much done at work, school or at home?", "How often have you had shortness of breath?", "How often did your asthma symptoms wake you up at night or earlier than usual in the morning?", "How often have you used your rescue inhaler or nebulizer medication (such as albuterol)?" and "How would you rate your asthma control"? The ACT total score is defined as the sum of the scores from all 5 questions, provided all questions have been answered; thus, the total score ranges from 5 (poor control of asthma) to 25 (complete control of asthma). A score of 20 or higher indicates well-controlled asthma. Change from Baseline was calculated as the total score at Week 12/Early Withdrawal minus the total score at Baseline.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of participants with the indicated reason for incorrect inhaler use and who required additional instruction the indicated number of times at Baseline, Week 2, and Week 4

| End point title | Number of participants with the indicated reason for incorrect inhaler use and who required additional instruction the indicated number of times at Baseline, Week 2, and Week 4 |
|---|---|

End point description:

Participants were given a demonstration of correct inhaler use (using placebo inhalers), and the participants' competence to correctly use the demonstration inhaler was then assessed based on 3 steps: open the device, inhale the dose, and close the device. If the participants did not perform the maneuvers correctly, the step of the inhaler use that was performed incorrectly by the participants was recorded. The entire procedure was demonstrated once again, and the number of times that the participants required additional instruction (RAI) was recorded. "99999" is used to indicate that data are not available (no participants used the inhaler incorrectly; thus, no data can be reported at the specified time point).

### Statistical analyses

No statistical analyses for this end point

## Secondary: Number of participants with the indicated responses to the ease of use questions regarding the inhaler at Week 4

| End point title | Number of participants with the indicated responses to the ease of use questions regarding the inhaler at Week 4 |
|---|---|

End point description:

Participants were asked to rate the inhaler (INH) by answering the following 2 questions: How do you rate the ease of use of the inhaler?; How easily are you able to tell how many doses of medication are left in the inhaler? For each of the questions, answers were made on a five-point scale: 1, very easy; 2, easy; 3, neutral; 4, difficult; 5, very difficult.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events (SAEs) and non-serious AEs were collected from the first dose of study medication up to Week 12/Early Withdrawal.

Adverse event reporting additional description:

SAEs and AEs were collected in members of Intent-to-Treat (ITT) Population, comprised of all participants randomized to treatment, who received at least one dose of the study medication.

| Assessment type | Systematic |

### Dictionary used

| | |
|---|---|
| Dictionary name | MedDRA |
| Dictionary version | 14.1 |

### Reporting groups

| | |
|---|---|
| Reporting group title | Placebo |

Reporting group description:

Participants (par.) received placebo once daily (OD) in the evening from the dry powder inhaler (DPI) for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| | |
|---|---|
| Reporting group title | FF 100 µg OD |

Reporting group description:

Participants received Fluticasone Furoate (FF) 100 microgram (µg) inhalation powder OD in the evening from the DPI for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| | |
|---|---|
| Reporting group title | FF/VI 100/25 µg OD |

Reporting group description:

Participants received FF/Vilanterol (VI) 100/25 µg inhalation powder OD in the evening from the DPI for 12 weeks. Participants were provided albuterol/salbutamol inhalation aerosol to be used as rescue medication during the Treatment Period.

| Serious adverse events | Placebo | FF 100 µg OD | FF/VI 100/25 µg OD |
|---|---|---|---|
| Total subjects affected by serious adverse events | | | |
| subjects affected / exposed | 0 / 203 (0.00%) | 1 / 205 (0.49%) | 0 / 201 (0.00%) |
| number of deaths (all causes) | 0 | 0 | 0 |

## More information

## Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

| Date | Amendment |
|---|---|
| 31 August 2010 | The original protocol, dated 22 June 2010, was amended twice.<br>Amendment 1, dated 31 August 2010, applied to all investigational sites and was in place after the initiation of subject enrolment but prior to the unblinding of the trial data.<br>Protocol changes specified in Amendment No. 01 were required to add a new European Union and International Medical Monitor and to extend the pre-dose FEV1 timeline, as follows:<br>• Sites in another study had been having difficulty in meeting the timeline of 5 minutes between pre-dose FEV1 and dosing at randomisation for the serial FEV1 procedure. Therefore, in this current study, the pre-dose timeline was extended to within 30 minutes of dosing to provide the sites with more time after the pre-dose assessment to randomise the subject and retrieve the appropriate clinical supplies medication for the subjects' first dose. |

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
