

**Clinical trial results:**

A phase II, randomized, controlled, observer-blind study to assess the safety, reactogenicity and immunogenicity of two formulations of GlaxoSmithKline (GSK) Biologicals' Streptococcus pneumoniae protein containing vaccine given as a 3-dose primary vaccination course co-administered with DTPa-HBV-IPV/Hib\* vaccine during the first 6 months of life and as a booster dose at 12-15 months of age.

\*DTPa-HBV-IPV/Hib = Infanrix hexa™

**Summary**

EudraCT number	2010-019730-27
Trial protocol	CZ PL SE DE
Global end of trial date	01 October 2012

**Results information**

Result version number	v3 (current)
This version publication date	02 June 2019
First version publication date	04 April 2015
Version creation reason	• New data added to full data set additional OPA-19A results for primary and booster phase

Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 November 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 October 2012
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

1. Non-inferiority of the candidate pneumococcal vaccine (dPly-Low Dose [LD] and PhtD-LD)[10PP-LD] versus Synflorix™ vaccine when administered with Infanrix hexa™ (DTPa-HBV-IPV/Hib) as a 3-dose primary vaccination, in terms of post-primary immunization fever > 40.0°C (rectal temperature) with causal relationship to vaccination.

2. (sequential): Non-inferiority of the candidate pneumococcal vaccine (dPly-High Dose [HD] and PhtD-HD)[10PP-HD] versus Synflorix™ vaccine when administered with Infanrix hexa™ as a 3-dose primary vaccination, in terms of post-primary immunization fever > 40.0°C (rectal temperature) with causal relationship to vaccination.

Criteria = Non-inferiority supported if one can rule out an increase, in terms of percentage of subjects with fever >40.0°C with causal relationship to vaccination (10PP-LD or 10PP-HD group as compared to Synflorix™ group) above 5% + half the incidence in the control group (= null hypothesis) as shown by a one-sided P-value < 5%.

Protection of trial subjects:

GSK has monitored the study to verify that, amongst others, the:

- Data are authentic, accurate, and complete.
- Safety and rights of subjects are being protected.
- Study is conducted in accordance with the currently approved protocol and any amendments, any other study agreements, GCP and all applicable regulatory requirements.

All subjects were supervised after vaccination with appropriate medical treatment readily available.

Vaccines were administered by qualified and trained personnel. Only eligible subjects that had no contraindications to any components of the vaccines were vaccinated. Subjects were followed-up for 31 days after each/last vaccination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 September 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 110
Country: Number of subjects enrolled	Sweden: 22
Country: Number of subjects enrolled	Czech Republic: 434
Country: Number of subjects enrolled	Germany: 10

Worldwide total number of subjects	576
EEA total number of subjects	576

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	576
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 576 subjects were initially enrolled in the study. Of these, one subject was older than protocol defined age range for the first vaccination, and therefore did not receive any vaccination.

### Pre-assignment

Screening details:

The study duration is approximately 10 to 14 months depending on age at recruitment and age at booster vaccination. 2 Phases in the study: Primary Phase when subjects received a 3-dose of pneumococcal vaccine co-administered with Infanrix hexa™ (Months 0, 1, 2), and Booster Phase when subjects received one dose of the same vaccines (Month 10).

### Pre-assignment period milestones

Number of subjects started	576
Number of subjects completed	575

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Study vaccine dose not administrated: 1
----------------------------	---

### Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Blinding implementation details:

Data collected in an observer-blind manner, meaning that during the course of the study, the subject and those responsible for the evaluation of any study endpoint (e.g. safety, reactogenicity, and immunogenicity) will all be unaware of which vaccine was administered. To do so, vaccine preparation and administration will be done by authorised medical personnel who will not participate in any of the study clinical evaluation assays.

The laboratory will be blinded to the treatment.

### Arms

Are arms mutually exclusive?	Yes
Arm title	10PP-LD/Infanrix hexa Group

Arm description:

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with low doses (LD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD) co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Arm type	Experimental
Investigational medicinal product name	Pneumococcal vaccine GSK 2189242A (Low Dose formulation 1)
Investigational medicinal product code	GSK 2189242A LD
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

4 doses: 3 primary doses at Study Months 0, 1 and 2. Subjects also received a booster dose , administered at Study Month 10. The 3 primary doses of the 10PP vaccine were administered intramuscularly (IM) in the thigh, on the right side. Booster doses were administered IM into the deltoid or thigh if the deltoid muscle size was not adequate, on the left side for the 10PP vaccine.

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	DTPa-HBV-IPV/Hib
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

**Dosage and administration details:**

4 doses: 3 primary doses at Study Months 0, 1 and 2. Subjects also received a booster dose , administered at Study Month 10. The 3 primary doses of the Infanrix hexa™ vaccines were administered intramuscularly (IM) in the thigh, on the left side. Booster dose was administered IM into the deltoid or thigh if the deltoid muscle size was not adequate, on the right side.

<b>Arm title</b>	10PP-HD/Infanrix hexa Group
------------------	-----------------------------

**Arm description:**

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with high doses (HD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD), co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Arm type	Experimental
Investigational medicinal product name	Pneumococcal vaccine (High Dose formulation 2)
Investigational medicinal product code	GSK 2189242A HD
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

**Dosage and administration details:**

4 doses: 3-dose primary vaccination at Study Months 0, 1 and 2 and a booster dose administered at Study Month 10. The 3 primary doses of the 10PP vaccine were administered intramuscularly (IM) in the thigh, on the right side. Booster dose was administered IM into the deltoid or thigh if the deltoid muscle size was not adequate, on the left side.

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	DTPa-HBV-IPV/Hib
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

**Dosage and administration details:**

4 doses: 3 primary doses at Study Months 0, 1 and 2. Subjects also received a booster dose , administered at Study Month 10. The 3 primary doses of the Infanrix hexa™ vaccines were administered intramuscularly (IM) in the thigh, on the left side. Booster dose was administered IM into the deltoid or thigh if the deltoid muscle size was not adequate, on the right side.

<b>Arm title</b>	Synflorix/Infanrix hexa Group
------------------	-------------------------------

**Arm description:**

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of Synflorix™ vaccine, co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Arm type	Active comparator
Investigational medicinal product name	Synflorix™
Investigational medicinal product code	10Pn-PD-DiT
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

**Dosage and administration details:**

4 doses: 3-dose primary vaccination at Study Months 0, 1 and 2 and a booster dose administered at Study Month 10. The 3 primary doses of Synflorix™ vaccine were administered intramuscularly (IM) in the thigh, on the right side. Booster dose was administered IM into the deltoid or thigh if the deltoid muscle size was not adequate, on the left side.

Investigational medicinal product name	Infanrix hexa™
Investigational medicinal product code	DTPa-HBV-IPV/Hib
Other name

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 576 subjects were initially enrolled in the study. Of these, one subject was older than protocol defined age range for the first vaccination, and therefore did not receive any vaccination.

## Baseline characteristics

### Reporting groups

Reporting group title	10PP-LD/Infanrix hexa Group
Reporting group description:	
This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with low doses (LD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD) co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	
Reporting group title	10PP-HD/Infanrix hexa Group
Reporting group description:	
This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with high doses (HD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD), co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	
Reporting group title	Synflorix/Infanrix hexa Group
Reporting group description:	
This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of Synflorix™ vaccine, co-administered with the Infanrix hexa™ vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

## End points

### End points reporting groups

Reporting group title	10PP-LD/Infanrix hexa Group
Reporting group description: This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with low doses (LD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD) co-administered with the <i>Infanrix hexa</i> <sup>TM</sup> vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	
Reporting group title	10PP-HD/Infanrix hexa Group
Reporting group description: This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with high doses (HD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD), co-administered with the <i>Infanrix hexa</i> <sup>TM</sup> vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	
Reporting group title	Synflorix/Infanrix hexa Group
Reporting group description: This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of <i>Synflorix</i> <sup>TM</sup> vaccine, co-administered with the <i>Infanrix hexa</i> <sup>TM</sup> vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	
Reporting group title	Prevnar 13/Infanrix hexa Group
Reporting group description: This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of <i>Prevnar 13</i> <sup>TM</sup> vaccine, co-administered with the <i>Infanrix hexa</i> <sup>TM</sup> vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.	

### Primary: Number of subjects with any and Grade 3 solicited general symptoms and with solicited general symptoms related to vaccination – Primary Phase of the study.

End point title	Number of subjects with any and Grade 3 solicited general symptoms and with solicited general symptoms related to vaccination – Primary Phase of the study. <sup>[1]</sup>
End point description: Assessed solicited general symptoms were Drowsiness, Irritability, Loss of appetite (Loss Appet.) and Fever (rectal temperature higher than or equal to [ $\geq$ ] 38 degrees Celsius [ $^{\circ}\text{C}$ ]). Any = Occurrence of the specified solicited general symptom, regardless of intensity and relationship to vaccination. Related = Occurrence of the specified symptom assessed by the investigators as causally related to vaccination. Grade 3 (G3) Drowsiness = Drowsiness that prevented normal activity. G3 Irritability = Crying that could not be comforted/prevented normal activity. G3 Loss of appetite = Subject did not eat at all. G3 Fever = Rectal temperature higher than ( $>$ ) 40.0 $^{\circ}\text{C}$ . Primary results correspond to results for occurrences of G3 fever symptoms assessed by the investigators as related to vaccination (Related G3 fever).	
End point type	Primary
End point timeframe: Within the 7-day (Days 0-6) periods post vaccination, after each dose (D) of the 3-dose primary vaccination course	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The scope of this primary end point was descriptive, no statistical hypothesis test was performed.

## Statistical analyses

No statistical analyses for this end point

### Primary: Percentage of subjects reporting fever > 40.0°C with causal relationship to vaccination after each primary vaccination dose and across doses in 10PP-LD/Infanrix hexa group and in Synflorix/Infanrix hexa group.

End point title	Percentage of subjects reporting fever > 40.0°C with causal relationship to vaccination after each primary vaccination dose and across doses in 10PP-LD/Infanrix hexa group and in Synflorix/Infanrix hexa group. <sup>[2]</sup>
-----------------	--

#### End point description:

Grade 3 fever was defined as fever by rectal measurement >40.0°C. Related was defined a causal relationship to vaccination. This endpoint was assessed after each primary vaccination dose and across doses and in subjects in the 10PP-LD/Infanrix hexa (or 10PP-LD) and Synflorix/Infanrix hexa (or 10PN) groups only.

End point type	Primary
----------------	---------

#### End point timeframe:

During the 7-day (Days 0-6) post-vaccination period following each primary vaccination dose and across doses

#### Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is related to the difference between 2 groups: the 10PP-LD/Infanrix hexa group and the Synflorix/Infanrix hexa group.

## Statistical analyses

Statistical analysis title	Non-inferiority: 10PP-LD versus Synflorix - dose 1
Statistical analysis description:	
Non-inferiority of 10PP-LD vaccine vs Synflorix™ vaccine post dose 1 was assessed by computing the difference in percentages of subjects reporting Grade 3 fever causally related to dose 1 vaccination in the 10PP-LD Group minus 10PN Group. Non-inferiority was supported if one could rule out an increase in terms of percentage of subjects (10PP-LD Group minus 10PN Group) above 5% + half the incidence in the 10PN Group (= null hypothesis) as shown by a 1-sided P-value < 5%.	
Comparison groups	Synflorix/Infanrix hexa Group v 10PP-LD/Infanrix hexa Group
Number of subjects included in analysis	290
Analysis specification	Pre-specified
Analysis type	non-inferiority
P-value	= 0.003 <sup>[3]</sup>
Method	Kem Phillip's statistical test
Parameter estimate	Difference in percentage
Point estimate	0

**Primary: Percentage of subjects reporting fever > 40° C with causal relationship to vaccination after each primary vaccination dose and across doses in the 10PP-HD/Infanrix hexa group and in the Synflorix/Infanrix hexa group.**

End point title	Percentage of subjects reporting fever > 40° C with causal relationship to vaccination after each primary vaccination dose and across doses in the 10PP-HD/Infanrix hexa group and in the Synflorix/Infanrix hexa group. <sup>[7]</sup>
-----------------	---

End point description:

Grade 3 fever was defined as fever by rectal measurement >40.0°C. Related was defined a causal relationship to vaccination. This endpoint was assessed after each primary vaccination dose and across doses and in subjects in the 10PP-HD/Infanrix hexa (or 10PP-HD) and Synflorix/Infanrix hexa (or 10PN) groups only.

End point type	Primary
----------------	---------

End point timeframe:

During the 7-day (Days 0-6) post-vaccination period following each primary vaccination dose and across doses

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint is related to the difference between 2 groups: the 10PP-HD/Infanrix hexa group and the Synflorix/Infanrix hexa group.

**Statistical analyses**

No statistical analyses for this end point

**Secondary: Number of subjects with unsolicited adverse events (AEs) – Primary Phase of the study.**

End point title	Number of subjects with unsolicited adverse events (AEs) – Primary Phase of the study.
-----------------	--

## End point description:

An unsolicited AE was defined as any untoward medical occurrence in a clinical investigation subject, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. An AE can therefore be any unfavourable and unintended sign (including an abnormal

laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a medicinal product. For the marketed products administered in the study, this also included failure to produce expected benefits (i.e. lack of efficacy), abuse or misuse of the product. Any = Occurrence of an unsolicited AE, regardless of intensity or relationship to vaccination.

End point type	Secondary
End point timeframe:	
Within the 31-day (Days 0-30) period post primary vaccination, across doses

## Statistical analyses

**Secondary: Antibody concentrations against pneumococcal pneumolysin toxoid (dPly) and pneumococcal histidine triad protein D (PhtD) proteins – Booster Phase of the study.**

End point title	Antibody concentrations against pneumococcal pneumolysin toxoid (dPly) and pneumococcal histidine triad protein D (PhtD) proteins – Booster Phase of the study.
-----------------	---

## End point description:

Antibody concentrations against dPly and PhtD (anti-dPly and anti-PhtD, respectively) were measured by enzyme-linked immunosorbent assay (ELISA), expressed as geometric mean concentrations (GMCs), in ELISA Units per milliliter (EL.U/mL). Cut-offs for seropositivity were concentrations higher than or equal to ( $\geq$ ) 12 EL.U/mL for anti-dPly antibodies and  $\geq$  17 EL.U/mL for anti-PhtD antibodies. This outcome concerns results for the Booster Phase of the study.

End point type	Secondary

### Secondary: Titers of antibodies against poliovirus types 1, 2 and 3 (anti-1, anti-2 and anti-3) – Booster Phase of the study.

End point title	Titers of antibodies against poliovirus types 1, 2 and 3 (anti-1, anti-2 and anti-3) – Booster Phase of the study.
End point description: Antibody titers were measured by virus microneutralization test, expressed as geometric mean titers (GMTs). The cut-off of the assay for anti-1, anti-2 and anti-3 antibody was a titer higher than or equal to ( $\geq$ ) 8. This outcome concerns results for the Booster Phase of the study.	
End point type	Secondary

End point timeframe:

At Months 10 and 11, e.g. prior to and at one month post booster vaccination with pneumococcal vaccine (10PP, Synflorix™ or Prevnar 13™)

## Secondary: Number of subjects with serious adverse events (SAEs).

End point title	Number of subjects with serious adverse events (SAEs).
-----------------	--

End point description:

A SAE was defined as any medical occurrence that resulted in death, was life-threatening, required hospitalisation or prolongation of hospitalisation, resulted in disability/incapacity in a subject. AE(s) considered as SAE(s) also included invasive or malignant cancers, intensive treatment in an emergency room or at home for allergic bronchospasm, blood dyscrasias or convulsions that did not result in hospitalisation, as per the medical or scientific judgement of the physician. Any = Occurrence of a SAE, regardless of relationship to vaccination.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Solicited symptoms: during the 7 days post-primary vaccination and post-booster vaccination.

Unsolicited AEs during 31 days post-primary vaccination and post booster vaccination. SAEs: during the entire study period (Months 0-11).

Adverse event reporting additional description:

Solicited symptoms results are presented only for subjects for whom results were available. Note: the occurrences (all) numbers were not calculated during the analysis: data entered are equal to the subject affected numbers.

Assessment type	Systematic

### Reporting groups

Reporting group title	10PP-LD/Infanrix hexa Group
-----------------------	-----------------------------

Reporting group description:

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with low doses (LD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD) co-administered with the **Infanrix hexa™** vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Reporting group title	10PP-HD/Infanrix hexa Group
-----------------------	-----------------------------

Reporting group description:

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of the GSK 2189242A (or 10PP) vaccine combined with high doses (HD) of pneumococcal pneumolysin toxoid proteins (dPly) and pneumococcal histidine protein D (PhtD), co-administered with the **Infanrix hexa™** vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Reporting group title	Synflorix/Infanrix hexa Group
-----------------------	-------------------------------

Reporting group description:

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of **Synflorix™** vaccine, co-administered with the **Infanrix hexa™** vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

Reporting group title	Prevnar 13/Infanrix hexa Group
-----------------------	--------------------------------

Reporting group description:

This group consisted in infants aged 6-14 weeks at primary vaccination who received a 3-dose primary vaccination of **Prevnar 13™** vaccine, co-administered with the **Infanrix hexa™** vaccine at Study Months 0, 1 and 2. Subjects also received a booster dose of each of these vaccines, administered at Study Month 10.

[14] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Solicited symptoms results are presented only for subjects for whom results were available.

[15] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Unsolicited symptoms results are presented only for subjects for whom results were available at the booster phase.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The results of analysis of the anti-Ply haemolysis activity inhibition are not presented as assay was not validated.
