Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 November 2015
Global end of trial reached?	Yes
Global end of trial date	04 November 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

It was the primary objective of the study to assess the rate of radiation-induced dermatitis grade 3/4 graded by the National Cancer Institute (NCI), Common Terminology Criteria for Adverse Events (CTCAE) version 4.02.

Protection of trial subjects:

Safety and tolerability assessments: collection of adverse events, routine laboratory parameters, vital signs, ECOG; Data Safety and Monitoring Board (DSMB): assessing safety/risk profile in regular intervals

Background therapy:

Fractionated radiotherapy (3D-conventional or IMRT); total duration of treatment was 7 to 8 weeks corresponding to 30 to 35 fractions of radiotherapy

Evidence for comparator: -

Actual start date of recruitment	14 June 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 160
Worldwide total number of subjects	160
EEA total number of subjects	160

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	82
From 65 to 84 years	75
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Patients were recruited between June 2011 and July 2015. Recruitment was stopped prematurely in July 2015. Due to persistently slow recruitment and increasing application of skin prophylaxis for patients undergoing radioimmunotherapy in the clinical routine, the expected planned number of patients could not be reached.

Pre-assignment

Screening details:

Inclusion and exclusion criteria were checked by the investigators. 161 pts were screened. 1 patient was excluded due to exclusion criteria (poor general condition due to infection). Of 160 pts enrolled, 154 pts qualified for analysis. 154 pts were analyzed in the Safety Set (SAF); 140 pts were analyzed in the mITT population.

Pre-assignment period milestones

Number of subjects started	161 ^[1]
Intermediate milestone: Number of subjects	Enrolled: 160
Number of subjects completed	154

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Screening Failure: poor condition due to infection: 1
Reason: Number of subjects	Consent withdrawn by subject: 2
Reason: Number of subjects	Limited compliance: 1
Reason: Number of subjects	No radiotherapy: 3

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 161 patients were screened for the trial. One patient was excluded due to exclusion criteria (poor general condition due to infection), 160 patients were enrolled into the trial.

Period 1

Period 1 title	Patients analyzed (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Patients analyzed - total
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Infusion

Dosage and administration details:

Cetuximab (Erbix®): 400 mg/m² initial dose, 250 mg/m² weekly for 6 to 7 weeks, intravenous (iv) infusion;

Fractionated radiotherapy (3D-conventional or IMRT): Total duration of treatment was 7 to 8 weeks corresponding to 30 to 35 fractions of radiotherapy

Number of subjects in period 1 ^[2]	Patients analyzed - total
Started	154
Completed	154

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 160 patients were enrolled into the trial. However, only 154 patients qualified for analysis, 6 subjects had to be excluded from analysis, as described in section "Subject disposition", sub-section "Pre-assignment". Baseline characteristics are only reported for patients that qualified for analysis, i.e. were included in the full analysis set (FAS) or the modified intention to treat population (mITT).

Subject analysis sets

Subject analysis set title	mITT
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

The mITT population consisted of 140 patients. Patients that did not receive any cetuximab or radiotherapy were excluded from the efficacy analysis as well as patients for whom all lesions were surgically removed with resection outcome R0 prior to study treatment (3 patients had a surgery with resection outcome R0 but had further lesions that were not or not completely resected (resection outcome R2 or RX); these patients were not excluded from analysis).

Patients excluded from mITT:

- R0 resection (all lesions) prior to study treatment (n = 13)
- CUP syndrome (n = 1)

Patients excluded from mITT and SAF:

- No radiotherapy (n = 3)
- Withdrawal of consent (n = 2)
- Limited compliance (n = 1)

Subject analysis set title	SAF
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety population consisted of all patients who received at least 1 dose of study medication cetuximab and at least 1 fraction of radiotherapy. This population was the primary population for evaluating the rate of radiodermatitis, and the general safety profile.

Patients excluded from SAF (and mITT):

- No radiotherapy (n = 3)
- Withdrawal of consent (n = 2)
- Limited compliance (n = 1)

- Limited compliance (n = 1)

Primary: Rate of radiation dermatitis NCI CTCAE grade 3 and 4

End point title	Rate of radiation dermatitis NCI CTCAE grade 3 and 4 ^[1]
-----------------	---

End point description:

The rate of radiation dermatitis grade 3 and 4 was defined as ratio of patients who developed radiation dermatitis of CTCAE (v 4.02) severity grade 3 or 4 until first follow-up visit after end of treatment (55-65 days after last radiation). The grading was determined weekly during therapy and once at the first follow-up visit (55-65 days after end of treatment) by the local investigator.

End point type	Primary
----------------	---------

End point timeframe:

First dose of cetuximab until first follow-up visit after end of treatment (55-65 days after last radiation)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This single-arm trial was explorative in nature with the goal to explore the side effect "radiation dermatitis". No hypothesis was stated and therefore data analysis was conducted descriptively without formal testing.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to poor recruitment, only 160 patients were included in this trial instead of 500 planned patients. The reduced number of analyzed patients may limit the generalisability of the study results.
