

Clinical trial results:

A Randomized Phase II Study of Afinitor (RAD001) vs. Sutent (Sunitinib) in Patients with Metastatic Non-Clear Cell Renal Cell Carcinoma (ASPEN)

Summary

EudraCT number	2010-019966-95
Trial protocol	GB
Global end of trial date	14 July 2015

Results information

Result version number	v1 (current)
This version publication date	27 January 2022
First version publication date	27 January 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 December 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary endpoint was a comparison of radiographic progression-free survival (rPFS) between the treatment arms following therapy initiation. Disease progression is defined by documentation of progressive disease according to RECIST 1.1 criteria, appearance of a new primary malignancy, or death (whichever occurs first), censored at the last tumor evaluation date.

Protection of trial subjects:

All patients provided written informed consent under a form issued by an institutional review board. Regulatory oversight and institutional review board or ethics board approval in the USA, Canada, and the UK was maintained for this trial

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 September 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 39
Country: Number of subjects enrolled	Canada: 5
Country: Number of subjects enrolled	United States: 64
Worldwide total number of subjects	108
EEA total number of subjects	39

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	61

From 65 to 84 years	44
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Between Sept 23, 2010, and Oct 28, 2013, 131 patients were assessed for eligibility and 109 patients were enrolled. 108 patients were evaluable. 51 patients were assigned sunitinib and 57 patients were assigned everolimus

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	131 ^[1]
Number of subjects completed	108

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Screen Failures: 23
----------------------------	---------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 131 patients consented to participate in the trial. These were considered to have started the pre-assignment period. 23 patients screen failed and were not assigned a study arm. 108 patients were enrolled to start treatment on trial.

Period 1

Period 1 title	Baseline Characteristics (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Sunitinib

Arm description:

Sunitinib malate was given orally at 50 mg once daily, for treatment cycles of 4 weeks on treatment and 2 weeks off treatment.

Arm type	Active comparator
Investigational medicinal product name	Sunitinib malate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Sunitinib malate was given orally at 50 mg once daily, for treatment cycles of 4 weeks on treatment and 2 weeks off treatment.

Arm title	Everolimus
------------------	------------

Arm description:

Everolimus was given orally at 10 mg once daily.

Arm type	Experimental
Investigational medicinal product name	Everolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
10 mg tablet orally once daily

Number of subjects in period 1	Sunitinib	Everolimus
Started	51	57
Completed	41	44
Not completed	10	13
Consent withdrawn by subject	3	-
Adverse event, non-fatal	7	13

Baseline characteristics

Reporting groups

Reporting group title	Sunitinib

End points

End points reporting groups

Reporting group title	Sunitinib
Reporting group description: Sunitinib malate was given orally at 50 mg once daily, for treatment cycles of 4 weeks on treatment and 2 weeks off treatment.	
Reporting group title	Everolimus
Reporting group description: Everolimus was given orally at 10 mg once daily.	

Primary: Radiographic Progression Free Survival

End point title	Radiographic Progression Free Survival
End point description:	
End point type	Primary
End point timeframe: Up to 24 months	

End point values	Sunitinib	Everolimus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	51	57		
Units: Months				
median (full range (min-max))	8.3 (5.8 to 11.4)	5.6 (5.5 to 6.0)		

Statistical analyses

Statistical analysis title	Primary outcome
Statistical analysis description: The null hypothesis was that PFS in patients treated with sunitinib(S) would be comparable to that of everolimus(E); the alternative hypothesis was that E would cause a 60% improvement in median PFS from 6.0 months to 9.6 months in S and E groups respectively, compared with S (HR 0.625). Using a two-sided type I error rate of 0.20, 90 PFS events would allow us to detect this difference with 83% power. PFS was tested using stratified log rank test, adjusting for stratification factors.	
Comparison groups	Sunitinib v Everolimus
Number of subjects included in analysis	108
Analysis specification	Pre-specified
Analysis type	equivalence
Parameter estimate	Hazard ratio (HR)
Point estimate	1.41

Confidence interval	
level	Other: 80 %
sides	2-sided
