

Clinical trial results:

An open-label, multicenter, efficacy and safety study of 4-month canakinumab treatment with 5-month follow-up and long-term treatment period in patients with active recurrent or chronic TNF-receptor associated periodic syndrome (TRAPS)

Summary

EudraCT number	2010-020061-24
Trial protocol	IE GB IT
Global end of trial date	20 June 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 October 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 June 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study was to assess response induced by canakinumab in subjects with active Tumor necrosis factor (TNF) receptor associated periodic syndrome (TRAPS) after 15 days of the first dose.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed. Corticosteroids and nonsteroidal anti-inflammatory drugs NSAIDs were allowed as rescue medication during active TRAPS attacks at the discretion of the investigator. Corticosteroids were allowed either as increased corticosteroid maintenance dose or intermittent steroid treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 October 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 8
Country: Number of subjects enrolled	Ireland: 2
Country: Number of subjects enrolled	Italy: 10
Worldwide total number of subjects	20
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	4
Adolescents (12-17 years)	13

Adults (18-64 years)	1
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 6 centres in 3 countries.

Pre-assignment

Screening details:

A total of 29 subjects were screened, out of which 20 were enrolled and exposed to study medication. Nine subjects were considered as screening failures due to unacceptable laboratory value or test procedure results.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Canakinumab
------------------	-------------

Arm description:

Subjects received body-weight stratified dosage of canakinumab (2 milligram/ kilogram (mg/kg) for subjects \leq 40 kg or 150 mg for subjects $>$ 40 kg) through subcutaneously (s.c.) route as the starting dose at baseline and monthly for 4 months. The dose was escalated at Day 8 if dose of canakinumab was not sufficient to resolve the qualifying TRAPS flare.

Arm type	Experimental
Investigational medicinal product name	Canakinumab
Investigational medicinal product code	ACZ885
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Body weight stratified dose of canakinumab 2 mg/kg or 150 mg injected s.c. at baseline and monthly for 4 months.

Number of subjects in period 1	Canakinumab
Started	20
Completed	18
Not completed	2
Lost to follow-up	2

Baseline characteristics

Reporting groups

Reporting group title	Canakinumab
-----------------------	-------------

Reporting group description:

Subjects received body-weight stratified dosage of canakinumab (2 milligram/ kilogram (mg/kg) for subjects \leq 40 kg or 150 mg for subjects > 40 kg) through subcutaneously (s.c.) route as the starting dose at baseline and monthly for 4 months. The dose was escalated at Day 8 if dose of canakinumab was not sufficient to resolve the qualifying TRAPS flare.

Reporting group values	Canakinumab	Total

Adults (18--64 years)	13	13	
Adults (65-84 years)	1	1	
Age continuous			
Units: years			
arithmetic mean	34.62		
standard deviation	\pm 18.362	-	
Gender categorical			
Units: Subjects			
Female	7	7	
Male	13	13	

End points

End points reporting groups

Reporting group title	Canakinumab
Reporting group description:	
Subjects received body-weight stratified dosage of canakinumab (2 milligram/ kilogram (mg/kg) for subjects ≤ 40 kg or 150 mg for subjects > 40 kg) through subcutaneously (s.c.) route as the starting dose at baseline and monthly for 4 months. The dose was escalated at Day 8 if dose of canakinumab was not sufficient to resolve the qualifying TRAPS flare.	

Primary: Percentage of subjects with complete or almost complete response at Day 15

End point title	Percentage of subjects with complete or almost complete response at Day 15 ^[1]
-----------------	---

End point description:

Complete response was defined as clinical remission (Physician's Global Assessment of TRAPS activity absent or minimal) and serological remission (C reactive protein (CRP) and/or Serum amyloid A protein (SAA) less than 10 milligram per litre (mg/L)). Almost complete response was defined as clinical remission and a partial serological remission (equal to or more than 70% reduction of baseline (CRP) and/or (SAA)). The primary analysis was performed on the Full Analysis Set (FAS), defined as all subjects who received at least one dose of study treatment and had at least one post-baseline assessment for primary efficacy.

End point type	Primary
----------------	---------

End point timeframe:

Day 15

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive summary statistics was planned for this outcome measure.

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: Percentage of subjects				
number (confidence interval 95%)	95 (75.1 to 99.9)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of subjects with complete or almost complete response at Day 8

End point title	Percentage of subjects with complete or almost complete response at Day 8
-----------------	---

End point description:

Complete response was defined as clinical remission (Physician's Global Assessment of TRAPS activity absent or minimal) and serological remission (CRP and/or SAA less than 10 mg/L). Almost complete response was defined as clinical remission and a partial serological remission (equal to or more than 70% reduction of baseline (CRP) and/or (SAA)). The analysis was performed on the FAS population.

End point type	Secondary
End point timeframe:	
Day 8	

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: Percentage of subjects				
number (confidence interval 95%)	80 (56.3 to 94.3)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of subjects with complete clinical remission at Day 8 and 15

End point title	Percentage of subjects with complete clinical remission at Day 8 and 15
End point description:	
Complete clinical remission was defined as Physician’s Global Assessment of TRAPS activity to be absent or minimal (1). TRAPS associated clinical signs and symptoms were assessed by the investigator at every visit on a 5-point scale: 0 = Absent; 1 = Minimal; 2 = Mild; 3 = Moderate; 4 = Severe. The analysis was performed on the FAS population.	
End point type	Secondary
End point timeframe:	
Day 8 and 15	

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: Percentage of subjects				
number (confidence interval 95%)				
Day 8	90 (68.3 to 98.8)			
Day 15	100 (83.2 to 100)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of subjects with target levels of C-reactive protein (CRP) and Serum amyloid A protein (SAA) at Day 8 and 15

End point title	Percentage of subjects with target levels of C-reactive protein (CRP) and Serum amyloid A protein (SAA) at Day 8 and 15
End point description: The CRP and SAA were used as inflammatory markers. The target level concentration was equal to or less than 10 mg/L. The analysis was performed on the FAS population.	
End point type	Secondary
End point timeframe: Day 8 and 15	

End point values	Canakinumab			
Subject group type	Reporting group

No statistical analyses for this end point

Secondary: Time to physician's assessed clinical remission

End point title	Time to physician's assessed clinical remission
End point description: Time period for complete remission after initial canakinumab treatment as assessed by subjects was defined as a Physician's Global Assessment of TRAPS symptoms of scale 1 or less. The Patient's Global Assessment was based on a 5-point scale: 0 = None/absent (no) ; 1 = Minimal; 2 = Mild; 3 = Moderate; 4 = Severe. The analysis was performed on the FAS population.	
End point type	Secondary
End point timeframe: From start of treatment to Day 15	

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: Days				
median (confidence interval 95%)	4 (3 to 8)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of subjects with complete or almost complete response at Day 15 after receiving additional dose at Day 8

End point title	Percentage of subjects with complete or almost complete response at Day 15 after receiving additional dose at Day 8
-----------------	---

End point description:

Subjects who had not achieved a complete response at Day 8 were given an additional dose of canakinumab. Complete response was defined as clinical remission (Physician's Global Assessment of TRAPS activity absent or minimal) and serological remission (CRP and/or SAA less than 10 mg/L). Almost complete response was defined as clinical remission and a partial serological remission (equal to or more than 70% reduction of baseline (CRP) and/or (SAA)). The analysis was performed on the FAS population.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 15

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	4 ^[2]			
Units: Percentage of subjects				
number (confidence interval 95%)	100 (39.8 to 100)			

Notes:

[2] - Only 4 subjects out of 20 had not achieved complete or almost complete response at Day 8.

Statistical analyses

No statistical analyses for this end point

Secondary: Time to patient's assessed clinical remission

End point title	Time to patient's assessed clinical remission
-----------------	---

End point description:

Time period for complete remission after initial canakinumab treatment as assessed by subjects was defined as a Patient's Global Assessment of TRAPS symptoms of scale 1 or less. The Patient's Global Assessment was based on a 5-point scale: 0 = None/absent (no) ; 1 = Minimal; 2 = Mild; 3 = Moderate; 4 = Severe. The analysis was performed on the FAS population.

Day 953 (n=10)	11.701 (\pm 7.9172)			

Notes:

[7] - Standard deviation value (0.0) denotes that the dispersion value was not applicable.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects exhibiting Anti-canakinumab antibodies at any visit

End point title	Number of subjects exhibiting Anti-canakinumab antibodies at any visit
-----------------	--

End point description:

Immunogenicity assessment included determination of anti-canakinumab (ACZ885) antibodies in serum samples using BIAcore system. The analysis was performed on the FAS population.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 to end of study

End point values	Canakinumab			
Subject group type	Reporting group			
Number of subjects analysed	20			
Units: Number of subjects	2			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
Dictionary version	17.0

Reporting groups

Reporting group title	Canakinumab
-----------------------	-------------

Reporting group description:

Subjects received body-weight stratified dosage of canakinumab (2 mg/kg for subjects \leq 40 kg or 150 mg for subjects $>$ 40 kg) through s.c. route as the starting dose at baseline and monthly for 4 months. The dose was escalated at Day 8 if dose of canakinumab was not sufficient to resolve the qualifying TRAPS flare.

Serious adverse events	Canakinumab		
Total subjects affected by serious adverse events			
subjects affected / exposed	7 / 20 (35.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Injury, poisoning and procedural complications			
Meniscus injury			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Cardiac disorders			
Pericarditis			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Pregnancy, puerperium and perinatal conditions			
Pregnancy			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

General disorders and administration site conditions			
Condition aggravated			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal disorders			
Intestinal obstruction			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 2		
deaths causally related to treatment / all	0 / 0		
Abdominal pain			
subjects affected / exposed	2 / 20 (10.00%)		
occurrences causally related to treatment / all	0 / 3		
deaths causally related to treatment / all	0 / 0		
Diarrhoea			
subjects affected / exposed	1 / 20 (5.00%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Vomiting

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 November 2010	Updated the volume of blood withdrawal for biomarker component, protocol for soluble plasma protein marker sample collection and information regarding subject diaries.
10 November 2011	Site monitoring and collection of efficacy and safety data during the 24 months of continued treatment were implemented after clarification on post follow-up period. Optimized PK/PD based dosing schedule was implemented, updated the duration of the follow-up period for actual maximum duration of the withdrawal period (5 months) and clarified almost complete response and relapse endpoints.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
