

Clinical trial results:

An Uncontrolled, open-label, phase II study in subjects with Metastatic Adenocarcinoma of the colon or rectum who are Receiving first line Chemotherapy with mFOLFOX6 (oxaliplatin/ folinic acid/5-fluorouracil [5-FU]) in combination with regorafenib

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 June 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 June 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- Objective tumor response rate (ORR), centrally assessed

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization (ICH) guideline E6: Good Clinical Practice. Before entering the study, the ICF was read by and explained to all subjects or their legally authorized representative. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy:

mFOLFOX6: On Day 1, subjects received 85 milligram per square meter (mg/m²) oxaliplatin as a 2 hour intravenous (IV) infusion and folinic acid (either 400 mg/m² D/L folinic acid or 200 mg/m² L folinic acid) as a 2 hour IV infusion. Once the initial infusion was completed, subjects received 5-FU 400 mg/m² IV bolus injection immediately followed by a 5-FU 2400 mg/m² IV infusion for 46 hours. Thus, all mFOLFOX6 components were delivered over a total administration period of 48 hours. The next cycle of mFOLFOX6 was administered on Days 15 to 17.

Evidence for comparator: -

Actual start date of recruitment	07 February 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	40 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	United States: 4
Country: Number of subjects enrolled	Italy: 15
Country: Number of subjects enrolled	United Kingdom: 11
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Spain: 14
Worldwide total number of subjects	54
EEA total number of subjects	50

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	33
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Male or female subjects with histological or cytological documentation of metastatic adenocarcinoma of the colon or rectum that was unresectable or unlikely of becoming resectable, who were at least 18 years of age and were suitable to receive mFOLFOX6 regimen as first line treatment could participate in this study at 16 centers in 7 countries.

Pre-assignment

Screening details:

Of 66 enrolled subjects, 54 received study medication, 4 withdrew consent during screening, and 8 were screen failures due to no measurable lesion, not suitable to receive mFOLFOX as 1st line regimen (2), uncontrolled hypertension, symptoms/signs/history of brain metastases, glomerular filtration rate too low (2), and protein in spot urine.

Period 1

Period 1 title	Treatment Period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Regorafenib + Oxaliplatin/Folinic Acid/5-FU (mFOLFOX6)
------------------	--

Arm description:

On Day 1, subjects received 85 milligram per square meter (mg/m²) oxaliplatin as a 2-hour intravenous (IV) infusion and folinic acid (either 400 mg/m² D/L-folinic acid or 200 mg/m² L-folinic acid) as a 2-hour IV infusion. Once the initial infusion was completed, subjects received 5-FU 400 mg/m² IV bolus injection immediately followed by a 5-FU 2400 mg/m² IV infusion for 46 hours. The next cycle of mFOLFOX6 was administered on Day 15 to 17. Subjects received Regorafenib (Stivarga, BAY73-4506) 160 mg orally once daily on Days 4 to 10 and Days 18 to 24. One cycle comprised 28 days.

Arm type	Experimental
Investigational medicinal product name	Regorafenib
Investigational medicinal product code	BAY73-4506
Other name	Stivarga
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received regorafenib 160 mg orally once daily on Days 4 to 10 and Days 18 to 24. If regorafenib was administered as a monotherapy during the study, 160 mg once daily was administered for 3 weeks on/1 week off. Doses were self-administered as four 40 mg tablets taken with 8 ounces of fluid after a low-fat breakfast.

Investigational medicinal product name	mFOLFOX6
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous bolus use , Intravenous use

Dosage and administration details:

On Day 1, subjects were administered 85 mg/m² oxaliplatin and folinic acid (either 400 mg/m² D/L-folinic acid or 200 mg/m² L-folinic acid) as a 2-hour IV infusion (sequential or concurrent administration was possible). Once the initial infusion was complete, subjects received a 5-FU 400 mg/m² IV bolus injection immediately followed by 5-FU 2400 mg/m² IV for 46 hours. Thus, all mFOLFOX6 components were delivered over a total administration period of 48 hours. The next cycle of mFOLFOX6 was administered on Day 15 to 17.

Stage at Initial Diagnosis			
The TNM classification of malignant tumors (TNM) is a cancer staging system that describes the extent of a person's cancer. T describes the size of the original (primary) tumor and whether it has invaded nearby tissue, N describes nearby (regional) lymph nodes that are involved, M describes distant metastasis. For colon carcinoma, this is translated into stages I-IV. Stages II-IV can be further subdivided in subgroups (for example A, B, or C).

Subject analysis set title	Per Protocol Set (PPS)
----------------------------	------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

PPS (N=48) included all FAS subjects with no major protocol deviations affecting tumor evaluation. At least one post-baseline tumor assessment was required in order to consider the subject evaluable. Subjects who were not evaluable for tumor response and who discontinued due to a drug-related toxicity, progression by clinical judgment before disease was re-evaluated, or death were also to be considered evaluable.

Subject analysis set title	Full Analysis Set (FAS)

---------------------------	---------------

Subject analysis set description:

FAS (N=54) included all subjects who received treatment.

Subject analysis set title	Primary Analysis Set (PAS)
----------------------------	----------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

PAS (N=41) was a subset of the PPS and included the first 41 subjects, who were assigned to treatment.

Primary: Objective Response (OR)

End point title	Objective Response (OR) ^[1]
-----------------	--

End point description:

OR was defined as the best tumor response (confirmed complete response [CR] or partial response [PR]) observed by magnetic resonance imaging (MRI) or computed tomography (CT) scan assessed according to the Response Evaluation Criteria in Solid Tumors (RECIST) criteria, version 1.1. CR and PR were confirmed not earlier than 4 weeks following the initial detection of response. CR = Disappearance of all clinical and radiological evidence of tumor (both target and non-target). Any pathological lymph nodes (whether target or non target) must have a reduction in short axis to less than (<) 10 millimeter

(mm). PR = At least a 30 percent (%) decrease in the sum of diameters of target lesions taking as reference the baseline sum, no unequivocal progression of existing non-target lesions and no appearance of new lesions.

End point type	Primary
----------------	---------

End point timeframe:

From start of treatment until 30 days after the last dose of study treatment, assessed by every 8 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: EudraCT database does not allow to report only one treatment group in statistical analyses section. Due to this format constraint, charts have been uploaded with the accurate details of statistical analyses for this endpoint. Please find the statistical analyses in the attachment below.

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-free Survival (PFS)

End point title	Progression-free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS was defined as time from the date of start of study treatment to the date of first observed disease progression (radiological according to central assessment or clinical), or death due to any cause, if death occurred before progression was documented. PFS for subjects without disease progression or death at the date of database cutoff were right-censored at the last date of tumor assessment. Subjects who had no tumor evaluation after baseline and no clinical progression post baseline and who did not die were censored at Day 1 in the analysis. PD = At least a 20% increase in the sum of diameters of target lesions taking as reference the smallest sum on study (this includes the baseline sum if that is the smallest on study). In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of at least 5 mm. Unequivocal progression of existing non target lesions or the appearance of one or more new lesions will also constitute PD.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 July 2011	<p>Amendment 1 was instituted to:</p> <ul style="list-style-type: none">- Require additional monitoring of liver function (weekly monitoring of aspartate transaminase, alanine transaminase, and bilirubin during the first 2 cycles of regorafenib dosing was added) and to include a dose modification/interruption table specific to changes of liver function tests under treatment in accordance with the Safety Report for Health Authorities and Ethics Committees, dated 13 July 2011- Add 2 inclusion criteria that ensured that subjects with adequate pancreatic and renal function were enrolled- Revise the description of withdrawal of subjects from study treatment to add clinical progression to radiological progression as a condition of disease progression- Add rules for the replacement of non-evaluable subjects for the primary endpoint- Clarify that the administration of oxaliplatin and folinic acid could be concurrent or sequential- Add a description of the reporting of adverse event of special interest- Revise the definition of the FAS population to align with the intent-to-treat principle- Rename the population analysis set to per-protocol analysis set- Change the display of population characteristics to reflect the FAS only- Provide miscellaneous corrections and clarifications to improved consistency throughout the document.
25 February 2014	<p>Amendment 2 was instituted to specify that OS data collection would be halted as of 30 June 2014.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

'99999' in the posting indicates that data were not calculated. Decimal places were automatically truncated if last decimal equals zero.

Notes:
