

## Clinical trial results:

### A Phase 2a, Double-blind, Placebo-controlled Study to Evaluate the Efficacy of MEDI-563 in Subjects with Moderate-to-severe Chronic Obstructive Pulmonary Disease and Sputum Eosinophilia

#### Summary

EudraCT number	2010-020127-52
Trial protocol	GB ES DE DK
Global end of trial date	11 July 2013

#### Results information

Result version number	v1 (current)
This version publication date	20 October 2016
First version publication date	20 October 2016

#### Trial information

##### Trial identification

Sponsor protocol code	MI-CP196
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01227278
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 July 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 July 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the effect of multiple subcutaneous (SC) doses of benralizumab on the rate of moderate or severe acute exacerbations of chronic obstructive pulmonary disease (AECOPD) in adult participants with moderate-to-severe chronic obstructive pulmonary disease (COPD) who exhibited eosinophilia [greater than or equal to 9 ( $\geq$ ) 3.0 percent (%) sputum eosinophilia in the previous 12 months or at screening] in sputum compared to placebo.

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. Participating participant signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 November 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	Poland: 29
Country: Number of subjects enrolled	Germany: 8
Country: Number of subjects enrolled	Canada: 14
Country: Number of subjects enrolled	United States: 22
Country: Number of subjects enrolled	Denmark: 8
Country: Number of subjects enrolled	Spain: 7
Worldwide total number of subjects	101
EEA total number of subjects	65

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	55
From 65 to 84 years	45
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 421 participants were screened and 101 participants were randomized into the study.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants received placebo matched to benralizumab (MEDI-563) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matched to benralizumab (MEDI-563) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

<b>Arm title</b>	Benralizumab 100 mg
------------------	---------------------

Arm description:

Participants received Benralizumab (MEDI-563) 100 milligram (mg) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

Arm type	Experimental
Investigational medicinal product name	Benralizumab
Investigational medicinal product code	MEDI-563
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Benralizumab (MEDI-563) 100 mg injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

<b>Number of subjects in period 1</b>	Placebo	Benralizumab 100 mg
Started	50	51
Completed	45	43
Not completed	5	8
Adverse event, serious fatal	-	2
Consent withdrawn by subject	4	4
Unspecified	1	2

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received placebo matched to benralizumab (MEDI-563) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

Reporting group title	Benralizumab 100 mg
-----------------------	---------------------

Reporting group description:

Participants received Benralizumab (MEDI-563) 100 milligram (mg) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).

Reporting group values	Placebo	Benralizumab 100 mg	Total
Number of subjects	50	51	101
Age categorical Units: Subjects			
Adults (18-64 years)	25	30	55
Elderly (From 65-84 years)	24	21	45
Elderly 85 years and over	1	0	1
Age Continuous   Units: years			
arithmetic mean	64.6	62.9	
standard deviation	± 7.5	± 8.2	-
Gender, Male/Female Units: participants

Male	29	35	64

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants received placebo matched to benralizumab (MEDI-563) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).	
Reporting group title	Benralizumab 100 mg
Reporting group description: Participants received Benralizumab (MEDI-563) 100 milligram (mg) injection subcutaneously every 4 weeks for the first 3 doses and then every 8 weeks for the next 5 doses (Day 1, 29, 57, 113, 169, 225, 281 and 337).	

### Primary: Annualized Incidence Rate of Moderate or Severe Acute Exacerbations of Chronic Obstructive Pulmonary Disease (AECOPD)

End point title	Annualized Incidence Rate of Moderate or Severe Acute Exacerbations of Chronic Obstructive Pulmonary Disease (AECOPD)
End point description: An AECOPD is defined as worsening of two or more major symptoms or one major and one minor symptom for two or more consecutive days. Annualized Incidence Rate of Moderate or Severe AECOPD was assessed based on AECOPD data up to Day 393 (Rate = total number of moderate or severe AECOPD in each group/total person-year follow-up in each group). The severity of an exacerbation of COPD is defined as: a) Mild exacerbations, which require treatment with an increase in usual therapy, example, increase use of short acting bronchodilators, b) Moderate exacerbations which require treatment with systemic corticosteroids, and or antibiotics and c) Severe exacerbations which require hospitalization. The per protocol (PP) population included all participants who had no major protocol violations, received at least 6 of the 8 total doses of investigational product, and completed the study through Day 393.	
End point type	Primary
End point timeframe: Day 1 up to 393	

End point values	Placebo	Benralizumab 100 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	42	40		
Units: AECOPD events/person-year				
number (confidence interval 95%)	0.92 (0.67 to 1.25)	0.95 (0.68 to 1.29)		

### Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Placebo v Benralizumab 100 mg

Number of subjects included in analysis	82
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.941 <sup>[2]</sup>
Method	Van Elteren Test
Parameter estimate	Rate ratio
Point estimate	1.03
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.67
upper limit	1.58

Notes:

[1] - 95 percent (%) confidence interval (CI) for rate ratio was based on normal approximation assuming rate with Poisson distribution.

[2] - Day 1 to 393: Van Elteren test was used to compare the two arms.

### Secondary: Number of Participants Reporting Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)

End point title	Number of Participants Reporting Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. A serious adverse event (SAE) was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment-emergent are events between administration of study drug and up to Day 561 that were absent before treatment or that worsened relative to pre-treatment state. TEAEs reported below included both SAEs and non-serious AEs. The safety population included all participants who received at least one dose of investigational drug.

End point type	Secondary

**Secondary: Change from Baseline in COPD-Specific Saint George's Respiratory Questionnaire (SGRQ-C) Total and Domain Scores at Day 393**

---

End point title	Change from Baseline in COPD-Specific Saint George's Respiratory Questionnaire (SGRQ-C) Total and Domain Scores at Day 393
-----------------	--

End point description:

The SGRQ is a health related quality of life questionnaire consisting of 40 items in three domains: symptoms (respiratory symptoms and severity), activity (activities that cause or are limited by breathlessness) and impacts (social functioning and psychological disturbances due to airway disease). Each question's response has a unique empirically derived weight where lowest possible weight is zero and the highest is 100. The total score and domain score are derived from the relevant items and converted to a score of 0 to 100 with a higher score indicating poorer health status. The PP population included all participants who had no major protocol violations, received at least 6 of the 8 total doses of investigational product, and completed the study through Day 393. Here, 'n' signifies those participants evaluable for this measure at specified time points for each group, respectively.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2011	- Study stopping criteria were amended.-Inclusion and exclusion criteria were revised.-Rescreening of participants was updated to 2 re-screenings for who had screen failed due to Hepatitis A and moderate-to-severe exacerbation prior to or after starting the 28-day run-in period.-Unblinding due to known effects of Benralizumab was revised.- Anticipated number of screened participants were removed from treatment regimens.- Treatment regimens and maintenance therapy were added.- Allowed concomitant medication during the study was revised.- Day28 was removed from Schedule of study procedures.- Text was updated in Schedule of study procedures and in Schedule of Participant Evaluations.-Office Spirometry Pre- and Post-bronchodilator was revised.- Wheeze was removed from visual analogue scales (VAS).- Patient-Reported Outcomes Questionnaire (PRO-Q) was added.- Acute Exacerbations of Chronic Obstructive Pulmonary Disease (AECOPD) Inpatient assessment was added.
15 February 2011	-Participants with a history of an untreated systemic helminth parasitic infestation were excluded. - Stool sampling added to Clinical Laboratory Tests. - Rescreening of participants was updated.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
