# Main objective of the trial:

To evaluate the efficacy and safety of ocrelizumab compared with placebo in subjects with primary progressive multiple sclerosis (PPMS).

## Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -	
Evidence for comparator: -	
Actual start date of recruitment	03 March 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	11 Months
Independent data monitoring committee (IDMC) involvement?	Yes

# Recruitment details: -Screening details: A total of 943 subjects were screened and 732 were randomized into the study, of which 725 received at least one dose of placebo or ocrelizumab. A total of 549 subjects were ongoing with double-blind treatment at the clinical cut-off date (CCOD). Period 1 title Double-Blind Treatment Period (overall period) Is this the baseline period? Yes Allocation method Randomised - controlled Blinding used Double blind Roles blinded Subject, Investigator Are arms mutually exclusive? Yes Placebo Arm description: Subjects with primary progressive multiple sclerosis (PPMS) received placebo matched to ocrelizumab at a schedule interval of 24 weeks up to at least 120 weeks. Placebo Arm type Investigational medicinal product name Placebo Investigational medicinal product code Other name Pharmaceutical forms Concentrate for solution for infusion Routes of administration Intravenous use

Dosage and administration details:

Subjects received placebo infusions matching ocrelizumab infusions of 300 milligram (mg) separated by 14 days, at a schedule interval of 24 weeks.

#### Arm description:

Subjects with PPMS received ocrelizumab administered, at a scheduled interval of every 24 weeks up to at least 120 weeks.

Arm type	Experimental
Investigational medicinal product name	Ocrelizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received ocrelizumab 600 mg intraveous (IV) as 300 mg infusions separated by 14 days, at a scheduled interval of every 24 weeks.

Time to Onset of Clinical Disability Progression (CDP) Sustained for at Least 24 Weeks During the Double-Blind Treatment Period

#### End point description:

The time to onset of CDP was defined as the time from baseline to the first disability progression, which is confirmed at the next regularly scheduled visit >=24 weeks (>=161 days) after the initial disability progression. Baseline for the time to onset of CDP is the date of randomisation, independent of the first day of dosing. Disability progression is defined as an increase of >=1.0 point from baseline EDSS score, if the baseline EDSS value is <=5.5 points (inclusive), or an increase of >=0.5 points, if the baseline EDSS is >5.5 points. ITT population included all randomised subjects in the study. Here, 99999 indicates median, -99999 minimum and 99999 maximum of full range as value observed were censored.

T25-FW change from baseline at Week 120
123 TW change from baseline at Week 120

## Statistical analysis description:

Estimates (back-transformed) based on mixed-effect model of repeated measures (MMRM) using unstructured covariance matrix: log(Post-baseline(BL)/BL) = log(BL 25-FTW) + Geographical Region (US vs. ROW) + Age (<=45, > 45 years) + Week + Treatment + Treatment\*Week (repeated values over Week) + log (BL 25-FTW)\*Week. Relative reduction was calculated as -Relative change = -(OCR response-Placebo response)/Placebo response\*100%. The 95% CI for relative reduction was obtained using the Bootstrap method.

End point title	Change in From Baseline Physical Component Summary Score
	(PCS) SF-36 Health Survey (SF-36) at Week 120

#### End point description:

The SF-36v2 is a 36-item, self- reported, generic measure of quality of life that has been widely used in multiple disease areas. It is composed of 8 health domains: Physical Functioning (PF), Role-Physical (RP), Bodily Pain (BP), General Health (GH), Vitality (VT), Social Functioning (SF), Role-Emotional (RE), and Mental Health (ME). In brief, scoring for each health domain scale involves (a) recoding item response values, (b) summing recoded response values for all items in a given scale to obtain the scale raw score, (c) transforming scale raw score to a 0-100 score. The PCS score is computed by (a) multiplying each health domain z score by a scale-specific physical factor score coefficient, (b) summing the resulting products, (c) converting the product total to T score. ITT population. Here, n=1 number of subjects evaluable for the specified category. Here, least square mean is indicating adjusted mean.

Were there any global substantial amendments to the protocol? Yes

03 March 2011	1. Clarification of the implementation of 2 separate infusions 14 days apart throughout the study. Implementation of the amended re-treatment regimen consisting of two 300 mg ocrelizumab infusions administered 14 days apart at a scheduled interval of every 24 weeks for all treatment doses of Study WA25046.  2. Revision of inclusion / exclusion criteria. The main changes included: 1) the inclusion of subjects with higher age (<=55 years) for a broader PPMS study population and 2) modification of the exclusion criteria to reduce the potential risk of infection to study subjects and to improve clarity of screening criteria.  3. Clarifications on prior experience with ocrelizumab development programs in lupus, rheumatoid arthritis (RA) and relapsing-remitting multiple sclerosis (RRMS).
15 June 2012	<ol> <li>Dosing preparation and infusion guidance were revised to simplify the preparation of infusion bags and dosing procedures.</li> <li>Specific eligibility cut-off values for immunoglobulin M (IgM) and immunoglobulin G (IgG) were modified to reflect the central lab reference ranges.</li> <li>Sites were informed of additional, optional sub-studies conducted at select centers in which subjects could be eligible to participate.</li> </ol>
06 February 2015	<ol> <li>An update to the Statistical Considerations and Analytical Plan section of the protocol in line with the Statistical Analysis Plan (SAP) for the study.</li> <li>Conversion of optional investigator-sponsored Roche-supported sub-studies to Roche supported exploratory substudies as per current policy of the sponsor.</li> <li>Revision of the pre-specified mandatory biomarker analysis plan.</li> <li>Inclusion of more detail with respect to the open-label extension phase.</li> </ol>

Notes:

Were there any global interruptions to the trial? No

None reported
