

Clinical trial results:

AN OPEN-LABEL, MULTICENTER, FOLLOW-UP STUDY TO EVALUATE THE LONG-TERM SAFETY AND EFFICACY OF BRIVARACETAM USED AS ADJUNCTIVE TREATMENT IN SUBJECTS AGED 16 YEARS OR OLDER WITH EPILEPSY

Summary

EudraCT number	2010-020345-27
Trial protocol	BE DE CZ ES GB SE FR AT FI NL IT EE LT LV HU BG
Global end of trial date	18 April 2019

Results information

Result version number	v1
This version publication date	01 November 2019
First version publication date	01 November 2019

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 June 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 April 2019
Global end of trial reached?	Yes
Global end of trial date	18 April 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the long-term safety and tolerability of brivaracetam (BRV) at individualized doses up to a maximum of 200 mg/day in epilepsy subjects.

Protection of trial subjects:

During the conduct of the study all participants were closely monitored.

Background therapy:

Background therapy as permitted in the protocol.

Evidence for comparator:

Not Applicable

Actual start date of recruitment	10 May 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Brazil: 14
Country: Number of subjects enrolled	Bulgaria: 7
Country: Number of subjects enrolled	Canada: 16
Country: Number of subjects enrolled	Czech Republic: 42
Country: Number of subjects enrolled	Estonia: 22
Country: Number of subjects enrolled	Finland: 5
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 22
Country: Number of subjects enrolled	Hong Kong: 2
Country: Number of subjects enrolled	Hungary: 19
Country: Number of subjects enrolled	India: 33
Country: Number of subjects enrolled	Italy: 45
Country: Number of subjects enrolled	Japan: 7
Country: Number of subjects enrolled	Latvia: 8
Country: Number of subjects enrolled	Lithuania: 11
Country: Number of subjects enrolled	Mexico: 59
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Poland: 74

Country: Number of subjects enrolled	Russian Federation: 24
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 22
Country: Number of subjects enrolled	Spain: 44
Country: Number of subjects enrolled	Sweden: 15
Country: Number of subjects enrolled	Taiwan: 17
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	United States: 212
Worldwide total number of subjects	766
EEA total number of subjects	360

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	13
Adults (18-64 years)	728
From 65 to 84 years	25
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study started to enroll patients in May 2011 and concluded in April 2019. 767 participants were included in the Enrolled Set but 1 participant from the United States of America was lost to follow-up and was excluded from the Safety Analysis Set.

Pre-assignment

Screening details:

Participants Flow refers to the Safety Set (SS).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Brivaracetam
------------------	--------------

Arm description:

Brivaracetam (BRV) was administered with a maximum of 200 mg/day, twice, daily, incremented by 50 mg/day on a weekly basis, during the Up-Titration. During the Down-Titration Period, the BRV dose was decreased in steps of a maximum of 50 mg/day on a weekly basis. A last down-titration step at 20 mg/day for 1 week was included prior to the Post-Treatment Period.

Arm type	Experimental
Investigational medicinal product name	BRIVARACETAM
Investigational medicinal product code	BRV
Other name	UCB34714
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Oral film-coated tablets of BRV 10mg, 25mg, and 50mg were used in this study. The BRV 10mg dose (20 mg/day) was used only for down-titration.

Number of subjects in period 1	Brivaracetam
Started	766
Completed	368
Not completed	398
Adverse event, serious fatal	5
Epilepsy surgery	1
Pregnancy planned	2
Left the country	1
PI decision	1
Adverse event, non-fatal	92
Patient didn't wish to continue	1
Investigator decision	2

Study closure at site	1
Incarcerated	2
Lost to follow-up	22
Subject choice	89
Lack of efficacy	164
Protocol deviation	15

Baseline characteristics

Reporting groups

Reporting group title	Brivaracetam
-----------------------	--------------

Reporting group description:

Brivaracetam (BRV) was administered with a maximum of 200 mg/day, twice, daily, incremented by 50 mg/day on a weekly basis, during the Up-Titration. During the Down-Titration Period, the BRV dose was decreased in steps of a maximum of 50 mg/day on a weekly basis. A last down-titration step at 20 mg/day for 1 week was included prior to the Post-Treatment Period.

Reporting group values	Brivaracetam	Total	
Number of subjects	766	766	
Age categorical Units: Subjects			
<=18 years	19	19	
Between 18 and 65 years	722	722	
>=65 years	25	25	
Age continuous Units: years			
arithmetic mean	40.0		
standard deviation	± 12.9	-	
Gender categorical Units: Subjects			
Male	370	370	
Female	396	396	

Subject analysis sets

Subject analysis set title	Brivaracetam (SS)
----------------------------	-------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

Brivaracetam (BRV) was administered with a maximum of 200 mg/day, twice, daily, incremented by 50 mg/day on a weekly basis, during the Up-Titration. During the Down-Titration Period, the BRV dose was decreased in steps of a maximum of 50 mg/day on a weekly basis. A last down-titration step at 20 mg/day for 1 week was included prior to the Post-Treatment Period. Participants formed the Safety Set (SS).

Subject analysis set title	Brivaracetam (POS Efficacy)
----------------------------	-----------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

Brivaracetam (BRV) was administered with a maximum of 200 mg/day, twice, daily, incremented by 50 mg/day on a weekly basis, during the Up-Titration. During the Down-Titration Period, the BRV dose was decreased in steps of a maximum of 50 mg/day on a weekly basis. A last down-titration step at 20 mg/day for 1 week was included prior to the Post-Treatment Period. Participants formed the Partial Onset Seizure Efficacy Set (POS Efficacy).

Subject analysis set title	Brivaracetam (PGS Efficacy)
----------------------------	-----------------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

Brivaracetam (BRV) was administered with a maximum of 200 mg/day, twice, daily, incremented by 50 mg/day on a weekly basis, during the Up-Titration. During the Down-Titration Period, the BRV dose was decreased in steps of a maximum of 50 mg/day on a weekly basis. A last down-titration step at 20 mg/day for 1 week was included prior to the Post-Treatment Period. Participants formed the Primary Generalized Seizure Efficacy Set (PGS Efficacy).

Reporting group values	Brivaracetam (SS)	Brivaracetam (POS Efficacy)	Brivaracetam (PGS Efficacy)
Number of subjects	766	749	12
Age categorical Units: Subjects

Primary: Percentage of participants with at least one Treatment-Emergent Adverse Event (TEAE)

End point title	Percentage of participants with at least one Treatment-Emergent Adverse Event (TEAE) ^[1]
End point description: Treatment-emergent Adverse Events (TEAEs) were defined as those events which started on or after the date of first dose of investigational medicinal product (IMP), or events in which severity worsened on or after the date of first dose of study medication. The event does not necessarily have a causal relationship with that treatment or usage.	
End point type	Primary
End point timeframe: From entry Visit 1 through End of Treatment (up to a maximum of 7 years - 84 months)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

End point values	Brivaracetam (SS)			
Subject group type	Subject analysis set			
Number of subjects analysed	766			
Units: Percentage of participants				
number (not applicable)	83.9			

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of participants who withdrew due to Adverse Events (AEs)

End point title	Percentage of participants who withdrew due to Adverse Events (AEs) ^[2]
-----------------	--

End point description:

An AE is any untoward medical occurrence in a participant or trial subject that is administered a drug or biologic (medicinal product) or that is using a medical device. The event does not necessarily have a causal relationship with that treatment or usage.

End point type	Primary
----------------	---------

End point timeframe:

From entry Visit 1 through End of Treatment (up to a maximum of 7 years - 84 months)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

End point values	Brivaracetam (SS)			
Subject group type	Subject analysis set			
Number of subjects analysed	766			
Units: Percentage of participants				
number (not applicable)	11.9			

Statistical analyses

No statistical analyses for this end point

Primary: Percentage of participants with at least one Serious Adverse Event (SAE)

End point title	Percentage of participants with at least one Serious Adverse Event (SAE) ^[3]
-----------------	---

End point description:

A Serious Adverse Event (SAE) is any untoward medical occurrence that at any dose:

- Results in death
- Is life-threatening
- Requires in patient hospitalization or prolongation of existing hospitalization
- Is a congenital anomaly or birth defect
- Is an infection that requires treatment parenteral antibiotics
- Other important medical events which based on medical or scientific judgement may jeopardize the patients or may require medical or surgical intervention to prevent any of the above.

End point type	Primary
----------------	---------

End point timeframe:

From entry Visit 1 through End of Treatment (up to a maximum of 7 years - 84 months)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study. Results were summarized as descriptive statistics only.

End point values	Brivaracetam (SS)			
Subject group type	Subject analysis set			
Number of subjects analysed	766			
Units: Percentage of participants				
number (not applicable)	18.4			

Statistical analyses

No statistical analyses for this end point

Secondary: Partial onset seizure (POS) (type I) frequency per 28 days during the Evaluation Period

End point title	Partial onset seizure (POS) (type I) frequency per 28 days during the Evaluation Period
-----------------	---

End point description:

The 28 day adjusted seizure frequency was calculated by dividing the number of partial seizures by the number of days for which the diary was completed, and multiplying the resulting value by 28.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline of the previous study to the Evaluation Period (up to a maximum of 7 years - 84 months)

End point values	Brivaracetam (POS Efficacy)			
Subject group type	Subject analysis set			
Number of subjects analysed	749			
Units: Seizures per 28 days				
median (inter-quartile range (Q1-Q3))				
Baseline	9.7 (5.5 to 23.7)			
On Treatment	4.2 (1.4 to 12.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percent change in Partial Onset Seizure (POS) (Type I) frequency per 28 days from Baseline of the previous study to the Evaluation Period

End point title	Percent change in Partial Onset Seizure (POS) (Type I) frequency per 28 days from Baseline of the previous study to the Evaluation Period
End point description: The percent change from the previous study baselines, in Partial Onset Seizure (POS) (Type I) frequency per 28 days is defined as: (the value at the previous study baselines) minus (the value at each time-points during the evaluation period) divided by the value at the previous study baselines. Note: Since N01258 was a safety study, participants were not required to meet seizure frequency requirements during the Baseline Period, and the Baseline Period was short (ie, 7 days). Therefore, participants from N01258 were excluded from efficacy summaries in the variable of percent change in POS frequency.	
End point type	Secondary
End point timeframe: From Baseline of the previous study to the Evaluation Period (up to a maximum of 7 years - 84 months)	

End point values	Brivaracetam (POS Efficacy)			
Subject group type	Subject analysis set			
Number of subjects analysed	675			
Units: Percent change				
median (inter-quartile range (Q1-Q3))	52.0 (16.8 to 81.5)			

Statistical analyses

No statistical analyses for this end point

Secondary: Responder rate in POS (type I) frequency over the Evaluation Period

End point title	Responder rate in POS (type I) frequency over the Evaluation Period
End point description: A responder is defined as a subject with a $\geq 50\%$ reduction in seizure frequency from the Baseline Period of the previous study. Note: Since N01258 was a safety study, participants were not required to meet seizure frequency requirements during the Baseline Period, and the Baseline Period was short (ie, 7 days). Therefore, participants from N01258 were excluded from efficacy summaries in the variable of responder rates in POS frequency.	
End point type	Secondary
End point timeframe: From Baseline of the previous study to the Evaluation Period (up to a maximum of 7 years - 84 months)	

End point values	Brivaracetam (POS Efficacy)			
Subject group type	Subject analysis set			
Number of subjects analysed	675			
Units: Percentage of participants				
number (not applicable)	51.7			

Statistical analyses

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 January 2011	Addition of deoxyribonucleic acid (DNA) analysis to assess the role of gene variants of synaptic vesicle protein 2A (SV2) in affecting response to BRV. Allowed study participants coming from N01258. Addition of laboratory assessments of liver function at 3-month intervals during the first year and a yearly thyroid-stimulating hormone (TSH) measurement in response to a regulatory agency request.
14 September 2011	Procedures for reporting serious adverse events (SAEs) were updated to implement the Food and Drug Administration (FDA) Final Rule requirements. The Columbia-Suicide Severity Rating Scale (C-SSRS) was added to address the requirement of the FDA that prospective assessments for suicidality should be included in clinical studies involving all drugs for neurological indications. The study variables were rearranged to more appropriately show that the main purpose of N01379 was to evaluate long-term safety of BRV in this patient population.
15 May 2015	Aligned existing language with updated UCB Standard Operating Procedures (SOPs) and/or best practices as well as to allow for a named patient or compassionate use program (or similar) or for participants to switch to another BRV study or to commercial BRV, if, when, and where available. The following changes were made where applicable in these protocols: <ul style="list-style-type: none">• In accordance with a new UCB SOP, the sponsor signature block was removed and replaced with a Sponsor Declaration and electronic signature.• Outdated safety information was deleted from Section 2.4 of the protocol.• The protocol contact information was updated.• The study duration language was revised to include the possibility of a named patient or compassionate use program (or similar) as a reason for ending the study.• Language regarding Investigator deviation from the protocol in the event of a medical emergency was revised to align with current UCB standard language.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
