

Clinical trial results:

Randomised, double-blind, placebo-controlled, parallel-groups, multi-centre clinical trial Phase III with Diclofenac Sodium 140 mg medicated plaster in patients with fresh impact injuries of the limbs.

Summary

EudraCT number	2010-020489-82
Trial protocol	DE

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 July 2011
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 April 2011
Global end of trial reached?	Yes
Global end of trial date	14 April 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial is to show superior efficacy of Diclofenac Sodium 140 mg medicated plaster over Placebo plaster as assessed by absolute change of pain on movement from baseline Visit 1 (Day 1) to Visit 3 (Day 3) in the indication fresh impact injuries of the limbs.

Protection of trial subjects:

Female patients who are not postmenopausal for at least 2 years or surgically sterilized and who are at risk of becoming pregnant must use a highly effective method of birth control. The contraceptive methods must be clearly stated in the patient documentation, and each of these women must have a negative pregnancy test before inclusion into the trial. The pregnancy tests has been provided by Fidia Farmaceutici S.p.A.

The investigator may withdraw the patient from the study at any time. Reasons for removing a patient from the trial include, but are not limited to:

- Adverse events
- Local intolerance of the plaster
- Unauthorised concomitant medication
- Major protocol violation that results in a significant risk to the patient's safety
- Unsatisfactory efficacy (defined as a worsening of pain on movement consisting in a difference on VAS scale of at least 19 mm from baseline Visit 135 to any other visit).
- Other reasons (e. g. randomisation code broken, pregnancy, etc.).

The patient should not take any concomitant treatment without the investigator's knowledge. All concomitant treatments/ therapies have to be recorded by the patient in the diary and then documented in the CRF by the investigator, giving INN, strength, galenic form, route of administration, dosage, date of start and end of treatment, and reason for therapy.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 September 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 168
Worldwide total number of subjects	168
EEA total number of subjects	168

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	168
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Studied period:

September 2010 to April 2011 (7 months)

Date of first enrolment:

FPI: 14 September 2010

Date of last completed:

LPO: 14 April 2011

Study centres:

Four active centres in Germany

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	168
Number of subjects completed	168

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Diclofenac Sodium 140 mg medicated plaster

Arm description:

Diclofenac Sodium 140 mg medicated plaster, topical application in the morning and in the evening. Topical treatment is started after enrolment into the trial (following baseline measurement). The plaster is applied two times a day, approximately every 12 hours, in the morning and in the evening, continued for in total 7 days.

Arm type	Experimental
Investigational medicinal product name	Diclofenac Sodium 140 mg medicated plaster
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Transdermal patch
Routes of administration	Topical use

Dosage and administration details:

140 mg Diclofenac Sodium medicated plaster, topical application, applied two times a day, approximately every 12 hours, in the morning and in the evening, continued for in total 7 days.

Arm title	Placebo plaster
------------------	-----------------

Arm description:

Placebo plaster, topical application according to the dosage instruction for Diclofenac Sodium 140 mg medicated plaster.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo plaster
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Transdermal patch
Routes of administration	Topical use

Dosage and administration details:

Placebo plaster, topical treatment is started after enrolment into the trial (following baseline measurement). The plaster is applied two times a day, approximately every 12 hours, in the morning and in the evening, continued for in total 7 days.

Number of subjects in period 1	Diclofenac Sodium 140 mg medicated plaster	Placebo plaster
Started	84	84
Completed	84	84

Baseline characteristics

Reporting groups

Reporting group title	Overall trial
Reporting group description: -	

Reporting group values	Overall trial	Total	
Number of subjects	168	168	
Age categorical			
-Males or females, age range 18-60 years, outpatients. -Good general health. -Fresh impact injury of the limbs presented within 3 hours after injury. -The size of the visible traumatization must be at least 25 cm ² and maximal 150 cm ² (in case of a muscle strain the area is assessed through palpation). -Pain assessment on movement by patient ≥ 40 mm at baseline (Visit 1) on a 100 mm VAS.			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	168	168

Male	102	102	

Subject analysis sets

Subject analysis set title	Full analysis set
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The full analysis set (FAS) will be defined as those patients who were randomised to one of the trial treatments (all randomised patients). In this trial population also patients with major protocol violations will be included.

The Full Analysis Set will be the primary population for the efficacy analyses in this superiority trial.

Subject analysis set title	Safety Set SAF
Subject analysis set type	Safety analysis

Subject analysis set description:

The safety set comprises all patients of the full analysis set who received at least one dose of the investigational medical product.

This patient population will be used to analyse the safety data (e.g. AEs).

Subject analysis set title	Per-protocol set (PP)
Subject analysis set type	Per protocol

Subject analysis set description:

The per-protocol set comprises all patients of the Full Analysis Set, who were treated with trial medication and who did not have any major protocol violations. Patients who terminated the trial prematurely due to inefficacy of the trial treatment and who did not have major protocol violations prior to trial termination will be included in the PP set.

The per-protocol set will be the secondary population for the efficacy analyses.
