

## Clinical trial results:

### A Double-blind, Randomized, Placebo-controlled, Multicentre, Relapse-prevention Study of Vortioxetine in Paediatric Patients Aged 7 to 11 Years With Major Depressive Disorder

#### Summary

EudraCT number	2010-020493-42
Trial protocol	BG PL LV ES
Global end of trial date	28 April 2022

#### Results information

Result version number	v1
This version publication date	04 October 2022
First version publication date	04 October 2022

#### Trial information

##### Trial identification

Sponsor protocol code	13546A
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT05014919
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	H. Lundbeck A/S
Sponsor organisation address	Ottoliavej 9, Valby, Denmark, 2500
Public contact	LundbeckClinicalTrials@lundbeck.com, H. Lundbeck A/S, +45 36301311, LundbeckClinicalTrials@lundbeck.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000455-PIP02-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 April 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 March 2022
Global end of trial reached?	Yes
Global end of trial date	28 April 2022
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the trial was to evaluate the efficacy of vortioxetine in the prevention of relapse of major depressive episodes in paediatric participants with Major Depressive Disorder (MDD).

Protection of trial subjects:

This study was conducted in compliance with Good Clinical Practice.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 August 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Colombia: 6
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	Latvia: 1
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Russian Federation: 4
Country: Number of subjects enrolled	Ukraine: 1
Worldwide total number of subjects	35
EEA total number of subjects	5

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	29
Adolescents (12-17 years)	6

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study population included de novo participants as well as rollover participants from other paediatric vortioxetine studies (Studies 12709A [NCT02709655] and 12712A [NCT02871297]) who, in the investigator's opinion, would benefit from continued treatment with vortioxetine.

### Pre-assignment

Screening details:

Rollover participants from Study 12709A enrolled to the open-label period and rollover participants (remitters) from Study 12712A randomized to the double-blind period.

### Period 1

Period 1 title	Open-Label (12 Weeks)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Open-Label Treatment: Vortioxetine
-----------	------------------------------------

Arm description:

Participants initiated treatment with vortioxetine tablets 5 milligrams (mg)/day orally for the first 2 days and thereafter they received 10 mg/day vortioxetine. Based on the response and dose-limiting adverse events (AEs), vortioxetine dose could be up- or down-titrated with 5 mg/day to a maximum of 20 mg/day during the first 8 weeks. From Week 8 to Week 12, the dose remained fixed.

Arm type	Experimental
Investigational medicinal product name	Vortioxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Vortioxetine was administered per dose and schedule specified in the arm description.

Number of subjects in period 1 <sup>[1]</sup>	Open-Label Treatment: Vortioxetine
Started	33
Received at least 1 dose of study drug	33
Completed	5
Not completed	28
Consent withdrawn by subject	2
Adverse event, non-fatal	1
Other than specified	24
Lack of efficacy	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Of 5 participants who completed open-label period, only 2 participants entered in the double-blind period.

## Period 2

Period 2 title	Double-Blind (26 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Double-Blind Relapse Prevention: Vortioxetine

Arm description:

Participants continued on the same fixed dose of vortioxetine as during the end of the open-label period for 26 weeks in the double-blind relapse prevention period.

Arm type	Experimental
Investigational medicinal product name	Vortioxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Vortioxetine was administered per dose and schedule specified in the arm description.

<b>Arm title</b>	Double-Blind Relapse Prevention: Placebo
------------------	--

Arm description:

Participants received placebo matched to vortioxetine for 26 weeks in the double-blind relapse prevention period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to vortioxetine was administered per schedule specified in the arm description.

<b>Number of subjects in period 2<sup>[2]</sup></b>	Double-Blind Relapse Prevention: Vortioxetine	Double-Blind Relapse Prevention: Placebo
Started	2	2
Received at least 1 dose of study drug	2	2
Completed	1	0
Not completed	1	2
Not specified	1	2

---

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: A total of 35 participants enrolled in this study: 33 in the open-label period and 2 in the double-blind period.

## Baseline characteristics

### Reporting groups

Reporting group title	Open-Label Treatment: Vortioxetine
-----------------------	------------------------------------

Reporting group description:

Participants initiated treatment with vortioxetine tablets 5 milligrams (mg)/day orally for the first 2 days and thereafter they received 10 mg/day vortioxetine. Based on the response and dose-limiting adverse events (AEs), vortioxetine dose could be up- or down-titrated with 5 mg/day to a maximum of 20 mg/day during the first 8 weeks. From Week 8 to Week 12, the dose remained fixed.

Reporting group values	Open-Label Treatment: Vortioxetine	Total

Black or African American	3	3	
Asian	1	1	
Other	16	16	

## End points

### End points reporting groups

Reporting group title	Open-Label Treatment: Vortioxetine
Reporting group description: Participants initiated treatment with vortioxetine tablets 5 milligrams (mg)/day orally for the first 2 days and thereafter they received 10 mg/day vortioxetine. Based on the response and dose-limiting adverse events (AEs), vortioxetine dose could be up- or down-titrated with 5 mg/day to a maximum of 20 mg/day during the first 8 weeks. From Week 8 to Week 12, the dose remained fixed.	
Reporting group title	Double-Blind Relapse Prevention: Vortioxetine
Reporting group description: Participants continued on the same fixed dose of vortioxetine as during the end of the open-label period for 26 weeks in the double-blind relapse prevention period.	
Reporting group title	Double-Blind Relapse Prevention: Placebo
Reporting group description: Participants received placebo matched to vortioxetine for 26 weeks in the double-blind relapse prevention period.	

### Primary: Time to Relapse in the Double-blind Period

End point title	Time to Relapse in the Double-blind Period <sup>[1]</sup>
End point description: Relapse was defined as either a total score $\geq 40$ on the Children Depression Rating Scale Revised Version (CDRS-R) with a history of 2 weeks of clinical deterioration, or clinical deterioration as judged by the clinician. The CDRS-R is rated by a clinician following interviews with the child and parent and consists of 17 items out of which 3 items rate nonverbal observations (listless speech, hypoactivity, and depressed affect). Fourteen items are rated on a 7-point scale from 1 to 7, and 3 items (sleep disturbance, appetite disturbance, and listless speech) are scored on a 5-point scale from 1 to 5. A rating of 1 indicates normal functioning and a higher number indicates a greater degree of depression. The total score ranges from 17 (normal) to 113 (severe depression). Due to the early termination of study and limited number of participants who completed the double-blind period, the efficacy analyses were not performed and data were not collected for this endpoint.	
End point type	Primary
End point timeframe: From randomisation to Week 26 in the double-blind treatment period	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: This endpoint is for double-blind period only.	

End point values	Double-Blind Relapse Prevention: Vortioxetine	Double-Blind Relapse Prevention: Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 <sup>[2]</sup>	0 <sup>[3]</sup>		
Units: weeks				
arithmetic mean (standard deviation)	( )	( )		

Notes:

[2] - The efficacy analyses were not performed and data were not collected for this endpoint.

[3] - The efficacy analyses were not performed and data were not collected for this endpoint.

### Statistical analyses

No statistical analyses for this end point

### Secondary: Change From Baseline in Children's Depression Rating Scale - Revised Version (CDRS-R) Total Score at Week 26

End point title	Change From Baseline in Children's Depression Rating Scale - Revised Version (CDRS-R) Total Score at Week 26
-----------------	--

End point description:

The CDRS-R is a clinician-rated scale to measure the severity of depression in children and adolescents. The CDRS-R is rated by a clinician following interviews with the child and parent and consists of 17 items out of which 3 items rate nonverbal observations (listless speech, hypoactivity, and depressed affect). Fourteen items are rated on a 7-point scale from 1 to 7, and 3 items (sleep disturbance, appetite disturbance, and listless speech) are scored on a 5-point scale from 1 to 5. A rating of 1 indicates normal functioning and a higher number indicates a greater degree of depression. The total score ranges from 17 (normal) to 113 (severe depression). ### Statistical analyses

No statistical analyses for this end point

### Secondary: Change From Baseline in Clinical Global Impression - Severity of Illness (CGI-S) Score at Week 26

End point title	Change From Baseline in Clinical Global Impression - Severity of Illness (CGI-S) Score at Week 26
-----------------	---

End point description:

The CGI-S provides the clinician's impression of the participant's current state of mental illness. The clinician uses his or her clinical experience of this participant population to rate the severity of the participant's current mental illness on a 7-point scale ranging from 1 (normal – not at all ill) to 7 (among the most extremely ill participants). Due to the early termination of study and limited number of participants who completed the double-blind period, the efficacy analyses were not performed and data were not collected for this endpoint.

### Secondary: Clinical Global Impression - Global Improvement (CGI-I) Score at Week 26

End point title	Clinical Global Impression - Global Improvement (CGI-I) Score at Week 26
End point description: The CGI-I provides the clinician's impression of the participant's improvement (or worsening). The clinician assesses the participant's condition relative to a baseline on a 7-point scale ranging from 1 (very much improved) to 7 (very much worse). Due to the early termination of study and limited number of participants who completed the double-blind period, the efficacy analyses were not performed and data were not collected for this endpoint.	
End point type	Secondary

No statistical analyses for this end point

## Secondary: Change From Baseline in Paediatric Quality of Life Enjoyment and Satisfaction Questionnaire (PQ-LES-Q) Total Score (Items 1 to 14) at Week 26

End point title	Change From Baseline in Paediatric Quality of Life Enjoyment and Satisfaction Questionnaire (PQ-LES-Q) Total Score (Items 1 to 14) at Week 26
End point description: The PQ-LES-Q is a participant-rated scale designed to assess satisfaction with life. It is an adaptation of the Quality of Life Enjoyment and Satisfaction Questionnaire, which is used to measure quality of life in adults. The PQ-LES-Q consist of 15 items, item 1 to 14 assess the degree of satisfaction experienced by participants in various areas of daily functioning, and item 15 allows participants to summarise their experience in a global rating. Each item is rated on a 5-point scale from 1 (very poor) to 5 (very good). The total score range of item 1 to 14 is 14 to 70, with higher scores indicating greater satisfaction. Due to the early termination of study and limited number of participants who completed the double-blind period, the efficacy analyses were not performed and data were not collected for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline (Week 0) up to Week 42

Adverse event reporting additional description:

All-patients-enrolled (APES) included all participants enrolled to the 12-week open-label, flexible-dose treatment period who took at least 1 dose of study drug. All-patients-randomized set (APRS) included all participants randomized to the 26-week double-blind treatment period.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated based on new efficacy data from another study. The main primary and secondary efficacy objectives were not assessed due to termination of the study and the limited number of participants who completed the double-blind period.
--

Notes:
