

Clinical trial results:

A Phase III, multi-center, randomized, 12-week, double-blind, parallel-group, placebo-controlled study to evaluate the efficacy and safety of RO4917838 in patients with sub-optimally controlled symptoms of schizophrenia treated with antipsychotics followed by a 40-week double-blind, parallel-group, placebo-controlled treatment period.

Analysis stage	Final
Date of interim/final analysis	23 January 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 December 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This was a phase III, multi-center, randomized, 12-week, double-blind, parallel-group, placebo-controlled study to evaluate the efficacy and safety of bitopertin (RO4917838) in participants with sub-optimally controlled symptoms of schizophrenia treated with anti-psychotics, followed by a 44-week double-blind, parallel-group, placebo-controlled treatment period (40-week treatment period followed by a 4-week washout period). The primary objectives of the study were to evaluate the efficacy after 12 weeks of treatment with bitopertin versus placebo, as adjunct to antipsychotics, in the Positive and Negative Syndrome Scale (PANSS) positive symptom factor score in participants with sub-optimally controlled symptoms of schizophrenia, and evaluate the safety and tolerability after 12 weeks of treatment with bitopertin versus placebo as adjunct to antipsychotics, in participants with sub-optimally controlled symptoms of schizophrenia.

Protection of trial subjects:

The study was conducted in accordance with the principles of "Declaration of Helsinki" and Good Clinical Practice according to the regulations and procedures consistent with the protocol. Approval from the Institutional Review Board (IRB)/Ethics Committee (EC) was obtained before study start and was documented in a letter to the Investigator specifying the date on which the committee met and granted the approval. An approval from the relevant regulatory authority was also obtained prior to the start of study. All the protocol amendments were submitted to the IRB/EC and to the regulatory authorities in accordance with the local regulatory requirements. A written informed consent was obtained from the participants and care givers prior to the participation in the study. All new safety information that resulted in significant changes in the risk/benefit assessment were reviewed and updated in the informed consent form, as necessary. Consent to the expanded pharmacokinetics (PK) assessments and long term extension period was also obtained from the participants and caregivers, as necessary.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 October 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 80
Country: Number of subjects enrolled	Czech Republic: 69
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	China: 182
Country: Number of subjects enrolled	Japan: 71
Country: Number of subjects enrolled	United States: 170
Country: Number of subjects enrolled	Russian Federation: 3

Worldwide total number of subjects	596
EEA total number of subjects	170

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	587
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study included 2 treatment periods, Treatment Period 1 (12-Week double blind treatment) and Treatment Period 2 (44-week double blind treatment), and Long Term Extension Period (for 3 years).

Pre-assignment

Screening details:

Out of 602 randomized participants, 2 were randomized to another bitopertin study first and not included in the safety population. A further 3 participants were randomized twice and only first randomization were analysed. One participant was randomized but not treated, and therefore, 596 participants were available in the safety population.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Bitopertin 10 mg – Treatment Period 1

Arm description:

Participants received bitopertin 10 milligrams (mg) oral tablet once a day (QD) for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Bitopertin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Bitopertin 10 mg oral tablet QD in the morning, with or without food for 12 weeks.

Arm title	Bitopertin 20 mg – Treatment Period 1
------------------	---------------------------------------

Arm description:

Participants received bitopertin 20 mg oral tablet QD for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Bitopertin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Bitopertin 20 mg oral tablet QD in the morning, with or without food for 12 weeks.

Arm title	Placebo – Treatment Period 1
------------------	------------------------------

Arm description:

Participants received placebo-matched to bitopertin QD for 12 weeks.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to Bitopertin oral tablet QD in the morning, with or without food for 12 weeks.

Number of subjects in period 1	Bitopertin 10 mg – Treatment Period 1	Bitopertin 20 mg – Treatment Period 1	Placebo – Treatment Period 1
Started	198	199	199
Completed	165	173	177

Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	No
Arm title	Bitopertin 10 mg – Treatment Period 2

Arm description:

Participants received bitopertin 10 mg oral tablet QD for 40 weeks (from Week 13 to Week 52).

Arm type	Experimental
Investigational medicinal product name	Bitopertin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Bitopertin 10 mg oral tablet QD in the morning, with or without food for 40 weeks (from Week 13 to Week 52).

Arm title	Bitopertin 20 mg – Treatment Period 2
Arm description: Participants received bitopertin 20 mg oral tablet QD for 40 weeks (from Week 13 to Week 52).	
Arm type	Experimental
Investigational medicinal product name	Bitopertin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Bitopertin 20 mg oral tablet QD in the morning, with or without food for 40 weeks.	

Arm title	Placebo – Treatment Period 2
Arm description: Participants received placebo-matched to bitopertin QD for 40 weeks (from Week 13 to Week 52).	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Placebo matched to Biopterin oral tablet QD in the morning, with or without food for 40 weeks.	

Number of subjects in period 2	Bitopertin 10 mg – Treatment Period 2	Bitopertin 20 mg – Treatment Period 2	Placebo – Treatment Period 2
Started	165	173	177
Completed	110	105	111

Primary: Change From Baseline in the PANSS Positive Symptom Factor Score (PSFS) at Week 12

End point title	Change From Baseline in the PANSS Positive Symptom Factor Score (PSFS) at Week 12
-----------------	---

End point description:

PANSS was a 30-item scale designed to capture degree of severity for many symptoms in schizophrenia. Symptoms and each item of the PANSS was rated on a 7-point scale: 1=Absent; 2=Minimal; 3=Mild; 4=Moderate; 5=Moderately severe; 6=Severe; 7=Extreme. Further assessment of symptoms using a factor analysis of the PANSS were calculated for PSFS which consisted of the following items: Delusions [P1], Hallucinatory behaviour[P3], Grandiosity [P5], Suspiciousness [P6], Stereotyped thinking [N7], Somatic concern [G1], Unusual thought content [G9], Lack of judgment and insight [G12]. Scores were transformed to 0-6 points with higher scores indicating greater severity of symptoms and 0 as absent. If any item score contributing to the factor score was missing then the factor was set to missing. Intent-to-Treat (ITT) population: All randomized participants who received at least 1 dose of double-blind study medication and had at least 1 post-baseline assessment of the primary efficacy variable.

Secondary: Change From Baseline in the PANSS Total Score at Week 12

End point title	Change From Baseline in the PANSS Total Score at Week 12
End point description: PANSS total score (sum of 30 items) assessed the positive symptoms (delusions, hallucination, grandiosity, suspiciousness, stereotyped thinking, somatic concern, unusual thought content, lack of judgment and insight), negative symptoms (blunted affect, emotional withdrawal, poor rapport, passive/apathetic social withdrawal, lack of spontaneity and flow of conversation, motor retardation, active social avoidance), general psychopathology (somatic concern, anxiety, guilt feelings, tension, mannerisms/posturing, depression, motor retardation, uncooperativeness, unusual thought content, disorientation, poor attention, lack of judgment/insight, disturbance of volition, poor impulse control, preoccupation, active social avoidance). Each item was rated on a 7 point scale (1=Absent; 2=Minimal; 3=Mild; 4=Moderate; 5=Moderately severe; 6=Severe; 7=Extreme). Total score ranged from 30 to 210; higher score indicated greater severity. ITT population were used for analysis.

Secondary: Change From Baseline in the PANSS Negative, Positive, and Psychopathology Subscale Score at Week 12

End point title	Change From Baseline in the PANSS Negative, Positive, and Psychopathology Subscale Score at Week 12
-----------------	---

End point description:

The PANSS was a 30-item scale designed to capture the degree of severity for many symptoms in schizophrenia. PANSS subscales include (Negative subscale, positive subscale and generalized psychopathology). Negative and positive subscale score included 7-items each and generalized psychopathology included 16 items. Each item was rated on a scale from 1 (symptom not present) to 7 (symptoms extremely severe). Total negative and positive scores = 1 to 7 each, with higher score indicating greater severity and total generalized psychopathology score = 1 to 16, higher score indicating greater severity.

The study program was terminated early, after the primary endpoint since the primary endpoint was not reached at higher doses of bitopertin. Analysis of the incomplete data set was not performed because it could potentially produce skewed or statistically irrelevant data.

Secondary: Change From Baseline in Personal and Social Performance (PSP) Total Score at Week 12

End point title	Change From Baseline in Personal and Social Performance (PSP) Total Score at Week 12
-----------------	--

End point description:

The PSP scale was designed to assess the degree of dysfunction a participant exhibits within 4 domains of behavior: a) socially useful activities, b) personal and social relationships, c) self-care, and d) disturbing and aggressive behavior, each rated on 6-point scale (1=absent to 6=very severe). Total transformed score from 1 to 100 is generated from raw score based on clinical interpretation of scores generated in 4 areas of functioning. A score lying between 71 and 100 indicated a good functioning; one between 31 and 70 indicated varying degrees of difficulty, and a score of ≤ 30 indicated functioning so poor that participant required intensive supervision. The study program was terminated early, after the primary endpoint since the primary endpoint was not reached at higher doses of Bitopertin. Analysis of the incomplete data set was not performed because it could potentially produce skewed or statistically irrelevant data.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 September 2010	Version B: Protocol was amended to clarify the exclusion criteria of hepatic dysfunction, secondary objective time point for safety and tolerability.
21 April 2011	Version C: Protocol was amended to clarify on the long term extension period, female contraception method and pregnancy testing, initiation of psychotherapy/rehabilitative, non-serious adverse events of special interest and reporting process, restricted and prohibited concomitant medication.
20 February 2012	Version D: Protocol was amended to clarify on addition of biomarker defined subpopulations as a secondary objective, timing of screening and prospective stabilization period, exclusion criteria (haemoglobin criterion, body mass index, requirement for past use of clonazepam), inclusion criteria (dosing of concomitant antipsychotics, definition of caregivers and burden assessment/questionnaire), updated list of restricted medications, updated definition of postmenopausal, and duration of the study. Added new guideline regarding withdrawal for hepatic laboratory abnormalities.
30 May 2012	Version D-1: Protocol was amended to include a revised version of the Zarit Burden Interview (ZBI) questionnaire, the Schizophrenia Caregiver Questionnaire (SCQ) to optimize assessment of caregiver burden for caregivers of patients with schizophrenia. Additionally, the Caregiver Global Impression scale was added.
30 October 2012	Version E: Protocol was amended to clarify on inclusion of futility analysis and addition of biomarker defined subpopulation analysis to the objectives, exclusion criteria (body mass index, patients with prior history of clozapine treatment), addition of 12-lead electrocardiogram (ECG) assessment in long term extension period, changes in serious adverse event (SAE) reporting, definition of safety population, and definition of length of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Results of many secondary endpoints were not reported as the study was terminated early due to failure in demonstration of adjunctive therapy with bitopertin in primary endpoint.

Notes:
