

Clinical trial results:

The role of anti-IgE (omalizumab) in the management of severe recalcitrant paediatric atopic eczema

Summary

EudraCT number	2010-020841-29
Trial protocol	GB
Global end of trial date	31 August 2017

Results information

Result version number	v1 (current)
This version publication date	02 May 2019
First version publication date	02 May 2019
Summary attachment (see zip file)	FINAL STUDY REPORT (ADAPT REC Final study report 2018 08 31.pdf)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2017
Global end of trial reached?	Yes
Global end of trial date	31 August 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Our hypothesis is that anti-IgE will reduce the levels of IgE in children with severe eczema, thereby alleviating their symptoms.

Protection of trial subjects:

Management of exacerbations and any additional therapy (eg.oral steroids or antibiotics) will be recorded.

All adverse events and side effects will be recorded in the CRF as per the Trial assessments, with the exception of abnormal blood results that are considered not clinically significant by the Investigator and will be managed as below.

Adverse events linked to the existing condition (atopic dermatitis) will be collected separately to help distinguish between expected events related to condition or side effects of concomitant medications.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 December 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 62
Worldwide total number of subjects	62
EEA total number of subjects	62

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	36

Adolescents (12-17 years)	25
Adults (18-64 years)	1
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were recruited from a single clinical site in London between 2016 and 2017.

Pre-assignment

Screening details:

Inclusion Criteria

1. Children aged 4-19yrs with:-
2. Severe eczema an objective SCORAD (a validated eczema severity score) of over 40
- ii. in a patient unresponsive to optimal topical therapy (potent topical steroids and topical calcineurin inhibitors) or systemic therapy¹
- iii. in whom there is no impression of lack of compliance
- iv. with a (C

Period 1

Period 1 title	Whole Group (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Participants will be allocated to treatment arm via an online dynamic algorithm which will be developed and hosted by the UKCRC registered King's College London CTU. The use of the online system will ensure concealment of treatment allocation for clinicians who are recruiting participants.

Arms

Are arms mutually exclusive?	Yes
Arm title	Omalizumab

Arm description:

Children will receive omalizumab treatment for 24 week.

Arm type	Experimental
Investigational medicinal product name	Xolair
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection/skin-prick test
Routes of administration	Subcutaneous use

Dosage and administration details:

The appropriate dose and dosing frequency of Xolair (omalizumab) is determined by baseline total IgE (range: 30 to 1 500 IU/ml), measured before the start of treatment, and body weight (kg). Prior to initial dosing, patients will have their IgE level determined by serum total IgE assay for their dose assignment. Based on these measurements, the dose of Xolair (omalizumab) will be calculated using the formula: $0.016 \times \text{weight (kg)} \times \text{total IgE level (kU/l)}$ or using the latest manufacturers dosing tables (according to the current Summary of Product Characteristics). 75 600 mg of Xolair (omalizumab) in 1 to 4 injections may be needed for each administration as shown in the tables. The dose of Xolair (omalizumab) stated on the table, closest to that child's weight and IgE levels, will be administered. Thus, if the total IgE level is above the upper limit stated on the dosing table, the highest dose of Xolair. They will remain on this dose throughout the 24 weeks of treatment

Arm title	Placebo
------------------	---------

Arm description:

Children on placebo for 24 weeks

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The appropriate dose and dosing frequency of placebo is determined in the same way as for Xolair by baseline total IgE (range: 30 to 1 500 IU/ml), measured before the start of treatment, and body weight (kg). Prior to initial dosing, patients will have their IgE level determined by serum total IgE assay for their dose assignment. Based on these measurements, the dose of placebo will be calculated using the formula: $0.016 \times \text{weight (kg)} \times \text{total IgE level (kU/l)}$ or using the latest manufacturers dosing tables (according to the current Summary of Product Characteristics for Xolair). They will remain on this dose throughout the 24 weeks of treatment.

Number of subjects in period 1	Omalizumab	Placebo
Started	30	32
Completed	28	31
Not completed	2	1
Withdrawn before starting IMP	1	-
Consent withdrawn by subject	-	1
Adverse event, non-fatal	1	-

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 May 2014	<p>Protocol change:</p> <ul style="list-style-type: none">• Baseline systemic steroids omitted.• Addition of treatment failure and alternative systemic therapies as secondary outcome measures as it was thought important to address whether treatment/placebo was associated with more failure of treatment• EASI eczema scoring added as this is increasingly used in studies• Samples to be stored for genetics studies (subject to consent). <p>Also administrative changes to the protocol.</p>
26 September 2014	<p>Changes to the secondary outcome measures and Secondary efficacy parameters. The age group between treatment group changed, Participants will be allocated to treatment group using minimisation. This is to ensure that there will be minimal imbalance of total IgE (≤ 1500, > 1500) and age (< 10 or ≥ 10 years) between treatment groups.</p> <p>In addition, there are various other administrative changes throughout the whole protocol and the labels</p>
30 July 2015	<p>The inclusion of the Transepidermal Water Loss test (TEWL), an additional optional test at Baseline, Week 24, 36 and 48. The exclusion criteria has been amended with pre-existing hepatic or renal impairment being removed, and the definition of 'Exacerbations of eczema' in section 6.2 of the protocol has been clarified.</p> <p>Additionally, the timepoint for urine testing has been changed from baseline to screening and the protocol has been revised to clarify the Xolair dosing for IgE levels at the limits of the dosing table. In addition, skin swabs will now not be taken from family members or at the end of treatment for any infections.</p> <p>There have been various other administrative changes and clarifications throughout the protocol and section 8.3 has been updated to bring it in line with the statistical analysis plan.</p>
27 September 2016	<p>Inclusion of a new secondary outcome measure as listed below and the statistics section has also been updated in line with the new version of the Statistical analysis plan. Below is a list of all changes made to the protocol:</p> <ol style="list-style-type: none">1. Trial Flowchart TEWL timing updated from screening to baseline visit, in line with the rest of the protocol.2. Clarification of primary outcome measures3. Inclusion of a new secondary outcome measure - 'Change in use of potent topical steroids and calcineurin inhibitors: the weight, extent and frequency of use will be recorded at each visit.'4. Clarification of inclusion criteria5. Clarification on treatment of eczema exacerbations to include that treatment can follow that 'as decided by the supervising physician' as well as the regimen included in the protocol.6. Statistics section updated in line with latest version of the Statistical Analysis Plan (SAP, version 2.0)7. Addition of protocol version history8. Staff update on the ADAPTrial study website and administrative corrections to the parent and child consent forms.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
