Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 August 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 August 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of 2 dose levels of pregabalin (Level 1: 2.5 mg/kg/day [maximum 150 mg/day] and Level 2: 10 mg/kg/day [maximum 600 mg/day]) compared to placebo as an adjunctive treatment in reducing the frequency of partial onset seizures in pediatric subjects 4 to 16 years of age.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 September 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Bulgaria: 2
Country: Number of subjects enrolled	Czech Republic: 5

Worldwide total number of subjects	295
EEA total number of subjects	116

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	173
Adolescents (12-17 years)	122
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The subjects for the study were enrolled from 18 countries. The study start date was 29-Sep-2011 and the study completion date was 10-Aug-2016.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Pregabalin: 2.5 mg/kg/day or 3.5 mg/kg/day

Arm description:

Subjects aged 4 to 16 years and less than (<) 30 kilograms (kg) in weight, received pregabalin 3.5 milligram per kilogram per day (mg/kg/day) (up to a maximum of 150 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and greater than or equal to (\geq) 30 kg in weight, received pregabalin 2.5 mg/kg/day (up to a maximum of 150 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Arm type	Experimental
Investigational medicinal product name	Pregabalin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects aged 4 to 16 years and < 30 kilograms (kg) in weight, received pregabalin 3.5 mg/kg/day (up to a maximum of 150 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and \geq 30 kg in weight, received pregabalin 2.5 mg/kg/day (up to a maximum of 150 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Arm title	Pregabalin: 10 mg/kg/day or 14 mg/kg/day
------------------	--

Arm description:

Subjects aged 4 to 16 years and < 30 kg in weight, received pregabalin 14 mg/kg/day (up to a maximum of 600 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and \geq 30 kg in weight, received pregabalin 10 mg/kg/day (up to a maximum of 600 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Arm type	Experimental
Investigational medicinal product name	Pregabalin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects aged 4 to 16 years and < 30 kilograms (kg) in weight, received pregabalin 14 mg/kg/day (up to a maximum of 600 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and \geq 30 kg in weight,

received pregabalin 10 mg/kg/day (up to a maximum of 600 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Arm title	Placebo
Arm description: Subjects aged 4 to 16 years received placebo matched to pregabalin, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects <30 kg in weight received placebo in the form of oral solution while subjects ≥30 kg in weight received placebo in the form of oral solution or capsule.	
Arm type	No intervention
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Pregabalin: 2.5 mg/kg/day or 3.5 mg/kg/day	Pregabalin: 10 mg/kg/day or 14 mg/kg/day	Placebo
Started	104	97	94
Completed	94	81	84

Baseline characteristics

Reporting groups

Reporting group title	Pregabalin: 2.5 mg/kg/day or 3.5 mg/kg/day
-----------------------	--

Reporting group description:

Subjects aged 4 to 16 years and less than (<) 30 kilograms (kg) in weight, received pregabalin 3.5 milligram per kilogram per day (mg/kg/day) (up to a maximum of 150 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and greater than or equal to (>=) 30 kg in weight, received pregabalin 2.5 mg/kg/day (up to a maximum of 150 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Reporting group title	Pregabalin: 10 mg/kg/day or 14 mg/kg/day
-----------------------	--

Reporting group description:

Subjects aged 4 to 16 years and < 30 kg in weight, received pregabalin 14 mg/kg/day (up to a maximum of 600 mg/day) oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects aged 4 to 16 years and >= 30 kg in weight, received pregabalin 10 mg/kg/day (up to a maximum of 600 mg/day) capsule or oral solution, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects aged 4 to 16 years received placebo matched to pregabalin, orally twice daily in equally divided doses, for the double-blind treatment phase of 12 weeks (3 months). Subjects <30 kg in weight received placebo in the form of oral solution while subjects >=30 kg in weight received placebo in the form of oral solution or capsule.

Primary: Log-Transformed 28-Day Seizure Rate For All Partial Onset Seizures During Baseline Phase

End point title	Log-Transformed 28-Day Seizure Rate For All Partial Onset Seizures During Baseline Phase ^[1]
End point description: All partial onset seizures experienced during baseline phase were recorded by the subjects or their parents/legal guardian, in a daily seizure diary. 28-day seizure rate for all partial onset seizures = ([number of seizures in the baseline phase] divided by [number of days in baseline phase minus {-} number of missing diary days in baseline phase])*28. For log-transformation, the quantity 1 was added to the 28-day seizure rate for all subjects to account for any possible "0" seizure incidence. This resulted in final calculation as: log transformed (28-day seizure rate +1).	
End point type	Primary
End point timeframe: Baseline phase (up to 8 weeks prior to treatment phase [Day 1])	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: For baseline, Only descriptive data was planned to be analyzed for this endpoint.

Other pre-specified: Child Behaviour Checklist (CBCL): Internalizing Subscale Score in Subjects Less Than 6 Years of Age

End point title	Child Behaviour Checklist (CBCL): Internalizing Subscale Score in Subjects Less Than 6 Years of Age
-----------------	---

End point description:

CBCL assessed suicidal behavior in children below 6 years. It is 100-item questionnaire completed by parent/legal guardian, based on subject's behavior in past 2 months. All 100 items rated on 3-point scale: 0=not true for that child; 1=sometimes true; 2=very/often true. Total CBCL score ranges from 0 (not true) to 200 (very/often true). Higher scores=higher levels of problematic behaviors or dysfunction. Scores from all items were used to calculate 3 subscale scores: Withdrawn subscale scores, Internalizing problems subscale scores and total problem subscale scores. All subscale scores reported scaled to T Scores. In this study, a cut-off of ≥ 68 on the T-scores was used for all 3 subscales. If a subject T Score was ≥ 68 in any of the sub-scales, the subject was referred for Mental Health Risk Assessment that included assessment of subject continuation to the study. Safety population. N=subjects evaluable for endpoint, n=number of subjects evaluable for specific categories.

All 100 items rated on 3-point scale: 0=not true for that child; 1=sometimes true; 2=very/often true. Total CBCL score ranges from 0 (not true) to 200 (very/often true). Higher scores=higher levels of problematic behaviors or dysfunction. Scores from all items were used to calculate 3 subscale scores: Withdrawn subscale scores, Internalizing problems subscale scores and total problem subscale scores. All subscale scores reported scaled to T Scores. In this study, a cut-off of ≥ 68 on the T-scores was used for all 3 subscales. If a subject T Score was ≥ 68 in any of the sub-scales, the subject was referred for Mental Health Risk Assessment that included assessment of subject continuation to the study Safety population. N= subjects evaluable for endpoint, n=number of subjects evaluable for specific categories.

occurrences (all)	1	0	0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 November 2011	1- Clarified that mentally or physically handicapped subjects do not have to complete CogState if they are unable.2- Clarified procedure if dose escalation phase not tolerated.3- Clarified that Greek and Cebuano speaking subjects/parents will be excluded. Greek and Cebuano subjects age 6 years and older can be included.4- Added "allergy to pregabalin or excipients..." in exclusion criteria 18.5- On SOA, footnote "d", added information on need for additional pregnancy tests based upon local regulations.
16 March 2015	1-Section 3.1 Screening and Baseline: AED changed to anti-epileptic treatments which include VNS; further detail added to diagnostic and risk assessment procedures.2- Section 4.3.1 Contraceptive Guidelines: updated with current standard wording.3- Section 7.2.1 Assessment of Suicidal Ideation: clarifications added.4- Section 9.4 Interim Safety Analysis: added clarifying text regarding E-DMC.5- Protocol Summary: updated, Lyrica approved in 130 countries, considered a PASS study, external DMC added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
