Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 September 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 September 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the efficacy and safety of CNTO 136 (sirukumab) administered intravenously (IV) in subjects with active, International Society of Nephrology (ISN)/Renal Pathology Society (RPS) Class III and IV lupus nephritis (LN).

Protection of trial subjects:

A Data Review Committee (DRC) was established that was composed of Johnson & Johnson clinicians and statisticians who were independent of the study team. The DRC was available to assess unblinded safety data and to make recommendations regarding the study, if needed, upon study team recommendation. Safety was assessed by monitoring (adverse effects (AEs), (serious adverse effects (SAEs), chemistry and hematology laboratory tests, lipid tests, vital signs, general physical examination and skin evaluations, concomitant medication review, (electrocardiogram (ECG) testing (heart rate, PR interval, QRS interval, QT interval, and QTc using QTcB and QTcF correction methods), pregnancy testing, infusion reactions, and antibodies to CNTO 136, as well as clinical assessments of their lupus disease.

Background therapy:

Subjects were required to receive stable immunosuppression with mycophenolate mofetil (MMF) 1 to 3 g/day (or equivalent dose of mycophenolic acid/ mycophenolate sodium [MPA]) with/without corticosteroids up to prednisone equivalent of 20 mg/day, or azathioprine 1 to 3 mg/kg/day with/without corticosteroids up to prednisone equivalent of 20 mg/day. They were also to be on a stable regimen of angiotensin converting enzyme (ACE) inhibitors and/or angiotensin II receptor blockers (ARBs), unless they were previously intolerant to or had contraindication to ACE inhibitors and ARBs.

Evidence for comparator: -

Actual start date of recruitment	28 January 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Mexico: 5
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Thailand: 6
Country: Number of subjects enrolled	United States: 9
Country: Number of subjects enrolled	Belgium: 3
Worldwide total number of subjects	25
EEA total number of subjects	5

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	25
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted from 28 January 2011 to 25 September 2013 in 18 centers.

Pre-assignment

Screening details:

An 8-week run-in period was used to establish the stability of baseline renal parameters prior to randomization and the first study agent administration. A total of 25 subjects were randomized and treated in the study: 21 subjects in the CNTO 136 group and 4 subjects in the placebo group.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received comparable volume of placebo matching with CNTO 136 as intravenous infusion on Week 0, 4, 8, 12, 16, 20, and 24

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received placebo (5% dextrose solution) matching with CNTO 136 as intravenous infusion on Week 0, 4, 8, 12, 16, 20, and 24.

Arm title	CNTO 136
------------------	----------

Arm description:

Subjects received CNTO 136, 10 milligram per kilogram of body weight (mg/kg) as intravenous infusion on Week 0, 4, 8, 12, 16, 20, and 24.

Arm type	Experimental
Investigational medicinal product name	CNTO136
Investigational medicinal product code	
Other name	Sirukumab, fully human anti-IL-6 mAb
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received CNTO 136, 10 milligram per kilogram of body weight (mg/kg) as intravenous infusion on Week 0, 4, 8, 12, 16, 20, and 24.

Number of subjects in period 1	Placebo	CNTO 136
Started	4	21
Completed	4	15
Not completed	0	6
Consent withdrawn by subject	-	1
Non Serious Adverse Event	-	3
Serious Adverse Events	-	2

Subject analysis set title	Modified Intent-to-Treat (m-ITT) Population
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: m-ITT population included all subjects who received at least 1 (partial or complete) dose of study agent and had baseline and at least 1 evaluable post baseline efficacy outcome measurement.	
Subject analysis set title	Safety population
Subject analysis set type	Safety analysis
Subject analysis set description: Safety analysis population included all subjects who were randomized and received at least 1 dose of study agent.	

Primary: Percent Reduction From Baseline in Proteinuria at Week 24

End point title	Percent Reduction From Baseline in Proteinuria at Week 24 ^[1]
End point description: Percent reduction from baseline in proteinuria measured by protein/creatinine (P/C) ratio in a 12 hour urine collection obtained at Week 24. A last observation carried forward (LOCF) procedure was used to impute missing values if a subject had data for at least one post baseline evaluation. A negative percentage reduction indicates an increase (worsening) in urine proteinuria.	
End point type	Primary
End point timeframe: Baseline to Week 24	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis were performed for this endpoint

End point values	Placebo	CNTO 136

Hypokalaemia			
subjects affected / exposed	1 / 21 (4.76%)	0 / 4 (0.00%)	
occurrences (all)	1	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2011	It involved extension in time frame from 3 months to approximately 6 months prior to screening for having a renal biopsy showing active nephritis as one of the possible criteria to characterize subjects as having persistently active LN (lupus nephritis); clarification to the SLEDAI-2K (systemic lupus erythematosus disease activity index 2000) and the SRI-50 (systemic lupus erythematosus disease activity index 2000 (SLEDAI-2K) responder index-50) assessments; clarifications to the urine sample collection and analysis process; clarification to the proteinuria requirement criteria; clarification to the footnotes for the antibodies to CNTO 136 and CNTO 136 concentration samples; clarification to include an option for subjects to receive the equivalent immunosuppressant therapy mycophenolic acid/mycophenolate sodium (MPA) instead of MMF; clarification to the timing with assessments and dosage administration.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
