

Clinical trial results:

A Phase III randomised, double blind, placebo-controlled, parallel group study to assess the efficacy and safety over 48 weeks of orally inhaled Tiotropium bromide (2.5 µg and 5 µg once daily) delivered by the Respimat® inhaler in adolescents (12 to 17 years old) with moderate persistent asthma.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000035-PIP02-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 January 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 June 2013
Global end of trial reached?	Yes
Global end of trial date	27 December 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This is a confirmatory phase III trial to evaluate efficacy and safety of a 48-week treatment with two doses (2.5 µg and 5 µg) of tiotropium bromide compared to placebo administered via the Respimat® device in adolescent patients (12 to 17 years old) with moderate persistent asthma.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Administration of rescue medication was allowed throughout the trial as medically needed. For the screening and treatment periods, open-label salbutamol/albuterol inhalers (100 µg per puff) were provided by the sponsor for use as rescue medication.

Background therapy:

Patients maintained their ICS background therapy.

Evidence for comparator: -

Actual start date of recruitment	05 January 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Slovakia: 45
Country: Number of subjects enrolled	Spain: 37
Country: Number of subjects enrolled	Germany: 26
Country: Number of subjects enrolled	Hungary: 135
Country: Number of subjects enrolled	Italy: 13
Country: Number of subjects enrolled	Latvia: 81
Country: Number of subjects enrolled	Chile: 57

Country: Number of subjects enrolled	Mexico: 19
Country: Number of subjects enrolled	Russian Federation: 71
Country: Number of subjects enrolled	Ukraine: 93
Country: Number of subjects enrolled	United States: 67

Worldwide total number of subjects	673
EEA total number of subjects	337

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	1
Adolescents (12-17 years)	672
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All subjects were screened for eligibility to the trial. Subjects attended specialist sites which would then ensure that they (the subjects) met all strict inclusion/exclusion criteria. Subjects were not to be randomised to trial treatment if any specific entry criteria were violated. Thus, out of 673 enrolled, 398 subjects were randomized.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo respimat

Arm description:

Inhalation of placebo solution once daily for 48 weeks, delivered by the Respimat Inhaler.

Arm type	Placebo
Investigational medicinal product name	Placebo respimat
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Patients received placebo (tiotropium-matching placebo solution for inhalation). The patients were to inhale 2 puffs from the Respimat® inhaler (placebo) every evening.

Arm title	Tio R2.5
------------------	----------

Arm description:

Inhalation of 2.5µg tiotropium bromide solution (Tio R2.5) once daily for 48 weeks, delivered by the Respimat Inhaler.

Arm type	Experimental
Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Patients received 2.5 µg tiotropium (Tio R2.5). The patients were to inhale 2 puffs (1.25 mcg of tiotropium) per puff from the Respimat® inhaler every evening.

Arm title	Tio R5
------------------	--------

Arm description:

Inhalation of 5µg tiotropium bromide solution (Tio R5) once daily for 48 weeks, delivered by the Respimat Inhaler.

One subject was not treated thus was not considered as starter nor non-completer.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

Patients received 5 µg tiotropium (Tio R5). The patients were to inhale 2 puffs (2.5 mcg of tiotropium) from the Respimat® inhaler every evening.

Number of subjects in period 1^[1]	Placebo respimat	Tio R2.5	Tio R5
Started	138	125	134
Completed	132	115	129
Not completed	6	10	5
Consent withdrawn by subject	-	4	1
Adverse event, non-fatal	2	-	-
Protocol deviation	3	-	1
not specified	1	5	-
Lack of efficacy	-	1	-
Reasons other than stated above	-	-	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one of the trial medication. One patient in the Tio R5 arm has started but was not treated, thus does not feature in this flowchart.

Primary: FEV1 peak0-3 Change From Baseline

End point title	FEV1 peak0-3 Change From Baseline
End point description: Change from baseline in peak Forced expiratory volume in 1 second within the first 3 hours post dosing (FEV1 peak0-3) measured at week 24.	

Note, the measured values presented are actually adjusted means.

Full analysis set (FAS) was the same as the treated set which included all randomised patients who were dispensed trial medication and received at least one documented dose of trial medication. Missing data at a visit was imputed by the available data from the patient at that visit, completely missing visits were handled by the statistical model.

In FAS we have 138, 125, 134 patients in each of 3 treatment arms.

Currently reported numbers are numbers of patients with endpoint at week 24 (from MMRM output).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 February 2011	Global amendment no. 1 (dated 18 Feb 2011) was limited to administrative changes, corrections and clarifications. To follow the project standard and to establish consistency between studies, the definition for treatment-emergent AEs was extended to include all AEs occurring until 30 days (instead of 21 days as stipulated in the original protocol) after the last intake of trial drug.
06 May 2011	Significant changes to the CTP introduced by global amendment no. 2 (dated 06 May 2011) were to allow reversibility testing for inclusion criterion no. 7 to be repeated once within 2 weeks if the patient did not reverse sufficiently during the first test, and correction of the reporting period for both AEs and SAEs to until 30 days after the last intake of trial drug.
06 February 2012	Significant changes to the CTP introduced by global amendment no. 3 (dated 06 Feb 2012) included an increase in the washout period prior to Visit 1 for LABAs given twice daily from 24 h to 72 h (3 days) and for LABAs given once daily from 48 hours to 4 days to avoid their influence on screening spirometry values. Other changes included clarification of (S)AE reporting, and addition of AEs that are defined as 'always serious adverse events'. Completion of question 7 of the ACQ at Visits 4, 6, and 8 was to be performed during programming of the dataset for the CTR and not by data management. The sample size was increased from 81 randomised patients per treatment group to 127 randomised patients per treatment group following an update to the expected SD for the primary endpoint of change from trial baseline in FEV1 peak0–3h from 270 mL to 340 mL (based on the results from previous trials of tiotropium in asthma).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
