Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	28 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this study was to provide continued access to rilpivirine (RPV) for subjects who were randomized and treated with RPV in the Phase 2b (TMC278-C204 [C204]) or Phase 3 studies (TMC278-TiDP6-C209 [C209] and TMC278-TiDP6-C215 [C215]), and who, at the time of roll-over, experienced and were expected to continue experiencing clinical benefit from RPV treatment.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practice (GCP) and applicable regulatory requirements. Serious Adverse Events (SAEs), Adverse events (AEs) leading to discontinuation, any grade 3/4 events of rash (irrespective of causality), AEs considered at least possibly related to RPV, human immunodeficiency virus (HIV)-related AEs, and pregnancies were collected from signing of the informed consent form (ICF) until the data cut-off date and were followed up by the investigator.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 February 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	9 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Worldwide total number of subjects	482
EEA total number of subjects	107

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	479
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total of 482 subjects were treated and 437 discontinued at data cut-off date (8 Feb 2018): 371 switched to commercially available RPV and 6 discontinued as they reached a virologic endpoint. At last visit of last subject (28 February 2020), out of 45 subjects 37 switched to commercially available RPV and 6 lost to follow-up.

Period 1

Period 1 title	Period 1 (Main Study)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not Applicable

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Rilpivirine (RPV) (TMC278-C204 [C204])
------------------	--

Arm description:

Subjects who rolled over from trial C204 continued to receive RPV 25 milligrams (mg) once daily (qd) in combination with an investigator-selected background regimen consisting of 2 nucleos(t)ide reverse transcriptase inhibitors (N[t]RTIs) starting Day 1.

Arm type	Experimental
Investigational medicinal product name	Rilpivirine
Investigational medicinal product code	
Other name	TMC278
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

RPV 25 mg oral tablets were administered orally.

Investigational medicinal product name	Nucleos(t)ide Reverse Transcriptase Inhibitors
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Two N(t)RTIs were administered as the investigator-selected background regimen.

Arm title	RPV (TMC278-TiDP6-C209 [C209] and TMC278-TiDP6-C215 [C215])
------------------	---

Arm description:

Subjects who rolled over from trial C209 and C215 continued to receive RPV 25 mg qd in combination with an investigator-selected background regimen consisting of 2 N(t)RTIs starting Day 1. In trial C209, the background regimen was fixed to tenofovir disoproxil fumarate (TDF)/emtricitabine (FTC) and in trial C215, the background regimen was selected by the investigator and contained either abacavir (ABC)/lamivudine (3TC), zidovudine (AZT)/3TC, or TDF/FTC.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Nucleos(t)ide Reverse Transcriptase Inhibitors
Investigational medicinal product code	
Other name

Investigational medicinal product code	
Other name	TMC278
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
RPV 25 mg oral tablets were administered orally.	

Number of subjects in period 1	Rilpivirine (RPV) (TMC278-C204 [C204])	RPV (TMC278-TiDP6- C209 [C209] and TMC278-TiDP6-C215 [C215])
Started	119	363
Completed	89	282
Not completed	30	81
Consent withdrawn by subject	2	12
Adverse events	3	11
Continued to RPV treatment	11	34
Investigator's/Subject's decision	2	3
Subject non-compliant	3	7
Lost to follow-up	5	12
Lack of efficacy	4	2

Period 2	
Period 2 title	Period 2 (After Protocol Amendment 3)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded
Blinding implementation details:	
Not Applicable	

Arms

Arm title	RPV 25 mg (After Protocol Amendment 3)
Arm description: All subjects who were continued under a simplified study setting with only a minimum of study-related activities, as per Protocol Amendment 3 continued to receive RPV 25 mg and followed up for safety.	
Arm type	Experimental
Investigational medicinal product name	Rilpivirine
Investigational medicinal product code	
Other name	TMC278
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

RPV 25 mg oral tablets were administered orally.

Number of subjects in period 2^[1]	RPV 25 mg (After Protocol Amendment 3)
Started	45
Completed	37
Not completed	8
Consent withdrawn by subject	1
Adverse event, non-fatal	1
Lost to follow-up	6

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only 45 subjects continued Rilpivirine (RPV) treatment per Protocol Amendment 3.

Secondary: Time To Treatment Failure

End point title	Time To Treatment Failure
End point description:	
Time to treatment failure was defined as time to virologic rebound (time to first HIV-1 RNA >= 50 or >= 200 copies/mL) or discontinuation for reason other than RPV having become commercially available in the participating country, whichever came first, calculated as the time (in days) from baseline until treatment failure. The mean survival time and its standard error were underestimated because the largest observation was censored and the estimation was restricted to the largest event time. The ITT population included all subjects who have taken at least 1 dose of RPV, regardless of their compliance with the protocol and adherence to the dosing regimen.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 May 2011	Amendment 1, issued on 5 May 2011, was considered substantial and the overall reason for the amendment was to replace the serum pregnancy test by a urine pregnancy test, add a reminder for the human leukocyte antigen (HLA)-B*5701 allele testing and viral genotype determination, switching of background nucleos(t)ide reverse transcriptase inhibitors [N(t)RTI]s from the roll-over visit onwards was allowed, effective methods of birth control for male and female subjects were updated and the withdrawal criteria were updated.
28 November 2016	Amendment 3, issued on 28 November 2016 (with country-specific amendments in South Africa and Chile [25 July 2017]), was considered substantial and the overall reason for the amendment was the simplification of the study and the reduction of study-related activities to a minimum for the limited number of subjects remaining in this study. The main component of the study remained to allow subjects who experienced and were expected to continue experiencing clinical benefit from rilpivirine (RPV) treatment to have continued access to RPV in a simplified study setting or to be switched to local (RPV-based) treatment options or local standard of care, as appropriate.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Not all AEs were collected; AEs considered related to RPV, leading to discontinuations, SAEs, or grade 3/4 events of rash regardless of causality were collected; discontinuation rate was > 90 percent which makes interpretation of results difficult.

Notes:
