## General information about the trial

Main objective of the trial:

To compare Insuman Implantable 400 International Units (IU)/ml versus Insuplant 400 IU/ml with respect to the pump refill accuracy during a 4 refill cycle period (comparative phase =  $160 \pm 20$  days); To assess efficacy measured by haemoglobin glycosylated (HBA1c) change in Insuman Implantable 400 IU/ml group versus Insuplant 400 IU/ml group after a 4 refill cycle period (comparative phase =  $160 \pm 20$  days).

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 17 sites in 4 countries between 16 November 2010 and 01 February 2018. A total of 472 subjects were included in study which consisted of 3 phases: comparative phase, non-comparative phase and treatment phase with Insuman Implantable.

### Pre-assignment

Screening details:

Of 472 subjects, 169 subjects were randomized in 1:1 ratio (Insuman Implantable : Insuplant) in comparative phase & 307 were included in non-comparative and treatment phase with Insuman Implantable. i.e. out of the included subjects, two-third subjects participated in two phases and one-third participated only in the Insuman non-comparative phase.

### Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind

### Arms

Arm title	All Subjects
-----------	--------------

Arm description:

Subjects earlier treated with Insuplant 400 International Units Per Millilitre (IU/mL) were included in the study and received Insuman Implantable 400 IU/mL or Insuplant IU/mL for 4 refill cycles in comparative phase and Insuplant 400 IU/mL for 4 refill cycles as per standard care in non-comparative phase. Comparative phase was followed by a treatment phase with only Insuman Implantable 400 IU/mL until its availability on the market. Each pump refill cycle was 40±5 days.

Arm type	Experimental
Investigational medicinal product name	Insuman Implantable
Investigational medicinal product code	
Other name	Human insulin (rapid acting)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intraperitoneal use

Dosage and administration details:

The glucose targets and insulin dose were established by the Investigator on a subject basis and as per American Diabetes Association guidelines. Treatments was administered by Continuous IntraPeritoneal Insulin Infusion (CIPII) through an implantable pump system.

Investigational medicinal product name	Insuplant
Investigational medicinal product code	
Other name	Human insulin semi synthetic porcine derived
Pharmaceutical forms	Solution for infusion
Routes of administration	Intraperitoneal use

Dosage and administration details:

The glucose targets and insulin dose were established by the Investigator on a subject basis and as per American Diabetes Association guidelines. Treatments was administered by CIPII through an implantable pump system.

### Primary: Percentage Refill Accuracy After 4 Refill Cycles: Modified Intent to Treat (mITT) Population

End point title	Percentage Refill Accuracy After 4 Refill Cycles: Modified Intent to Treat (mITT) Population
End point description: Refill accuracy was calculated as a percentage difference between the theoretical refill volume calculated by the personal pump communicator (PPC) using programmed values and the actual refill volume used by weight measurement after 4 refill cycles. Analysis was performed on mITT population for refill accuracy. mITT population included subjects who had given their informed consent, for whom there was confirmation of successful allocation of a randomization number through the study treatment allocation system, and who received at least one administration of the study drug and had an evaluation for each primary outcome. Subjects who had no available or no valid post-baseline refill value were excluded from the mITT population for refill accuracy.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of informed consent form until the end of the study i.e. end of Insuman non comparative phase (maximum treatment exposure: 6.6 years) regardless of seriousness/relationship to investigational product.

Adverse event reporting additional description:

Reported AEs & deaths are treatment-emergent AEs that is AEs that developed/worsened & deaths occurred during 'on treatment period' (time interval between first Insuman administration & 10 days after last study drug administration). Safety population. 3 subjects from comparative phase (1 from Insuman & 2 from Insuplant) were not included in analysis.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 March 2011	Following amendments were made: - To comply with the standard practice in the real life for the Insuplant non comparative phase: time to refill and blood withdrawal for HbA1c and anti-insulin antibodies were scheduled according to the site usual care. - Inclusion criteria for Insuman non comparative phase were added. Subjets who didn't participate to the comparative phase nor to the Insuplant non-comparative phase were allowed to participate directly to the Insuman non-comparative phase. - Correction of a mistake in the initial version of the protocol: no blood sample was collected for fasting plasma glucose, lipid profile (total cholesterol, high-density lipoprotein and low-density lipoprotein cholesterol, triglycerides) and chemistry (aspartate transferase, alanine transaminase, serum creatinine).
06 June 2011	- To allow the inclusion, in the Insuman non-comparative phase, of subjects not previously treated with Minimed implantable pump, but requiring CIPII therapy. - To allow subjects being pregnant during Insuman non-comparative phase to continue their treatment with Insuman Implantable 400 IU/mL as the duration of this phase was planned to end only when the product was marketed and as the safety profile of insulin is well established in pregnancy.
