

Clinical trial results:

A Phase 3B, Open Label, Multi-Center Study to Evaluate the Safety, Tolerability and Immunogenicity of Novartis Meningococcal B Recombinant Vaccine When Administered Alone to Healthy Infants According to Different Immunization Schedules and to Healthy Children Aged 2 to 10 Years

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Summary

EudraCT number	2010-021528-81

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan	EMA-000139-PIP01-07

number(s)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
Notes:	

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 July 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 December 2014
Global end of trial reached?	Yes
Global end of trial date	01 July 2015
Was the trial ended prematurely?	No
Notes:	

General information about the trial

Main objective of the trial:

To demonstrate a sufficient immune response following rMenB+OMV NZ vaccination, when given as a two dose primary series to healthy infants at 3 1/2 and 5 months of age or at 6 and 8 months of age, as measured by the percentage of subjects with serum bactericidal activity (SBA) titers of at least 4, at 1 month after the second rMenB+OMV NZ dose, directed against MenB indicator strains H44/76, 5/99 and NZ98/254.

Protection of trial subjects:

This clinical study was designed, implemented and reported in accordance with the ICH Harmonized Tripartite Guidelines for Good Clinical Practice, with applicable local regulations (including European Directive 2001/20/EC, US Code of Federal Regulations Title 21, and Japanese Ministry of Health, Labor, and Welfare), and with the ethical principles laid down in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 April 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 417
Country: Number of subjects enrolled	Peru: 59
Country: Number of subjects enrolled	Spain: 653
Country: Number of subjects enrolled	Hungary: 280
Worldwide total number of subjects	1409
EEA total number of subjects	933

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1005
Children (2-11 years)	404
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted in a total of a total of 26 sites; 4 sites in Brazil, 3 sites in Peru, 10 sites in Hungary, 9 sites in Spain.

Pre-assignment

Screening details:

All enrolled subjects were included in the study.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	B_2h3h5_11

Arm description:

Subjects approximately 2.5 months of age received 3 dose primary vaccination of rMenB+OMV NZ at 2.5, 3.5, 5 months of age, followed by a booster dose at 11 months of age.

Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine
Investigational medicinal product code	
Other name	rMenB+OMV NZ
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

rMenB+OMV NZ Vaccine: Administration was done intramuscularly (IM), 3 doses + booster, of 0.5 mL each.

Arm title	B_3h5_11
------------------	----------

Arm description:

Subjects approximately 3.5 months of age received 2 dose primary vaccination of rMenB+OMV NZ at 3.5 and 5 months of age, followed by a booster dose at 11 months of age.

Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine
Investigational medicinal product code	
Other name	rMenB+OMV NZ
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

rMenB+OMV NZ Vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each.

Arm title	B_68_11
------------------	---------

Arm description:

Subjects approximately 6 months of age received 2 dose primary vaccination of rMenB+OMV NZ at 6 and 8 months of age, followed by a booster dose at 11 months of age.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine
Investigational medicinal product code	
Other name	rMenB+OMV NZ
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details: rMenB+OMV NZ Vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each.	
Arm title	B_02_2_5
Arm description: Subjects 2-5 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start.	
Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine
Investigational medicinal product code	
Other name	rMenB+OMV NZ
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details: rMenB+OMV NZ vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each.	
Arm title	BC_35_12
Arm description: Subjects 3 months of age received rMenB+OMV NZ + MenC-CRM and Synflorix concomitantly at 3, 5 and 12 months of age and an additional dose of Synflorix alone dose at 7 months of age.	
Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine Meningococcal (group C) oligosaccharide diphtheria CRM-197 conjugate vaccine Synflorix
Investigational medicinal product code	
Other name	rMenB+OMV NZ MenC-CRM Synflorix
Pharmaceutical forms	Powder and solvent for suspension for injection, Suspension for injection, Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details: rMenB+OMV NZ vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each. MenC-CRM vaccine: Administration was done IM, 2 doses booster, of 0.5 mL each. Synflorix: Administration was done IM, 3 doses + booster.	
Arm title	C_35_12
Arm description: Subjects 3 months of age received MenCCRM and Synflorix concomitantly at 3, 5 and 12 months of age and an additional dose of Synflorix alone at 7 months of age and rMenB+OMV NZ alone at 13 and 15 months of age.	
Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine Meningococcal (group C) oligosaccharide diphtheria CRM-197 conjugate vaccine Synflorix
Investigational medicinal product code	
Other name	rMenB+OMV NZ MenC-CRM Synflorix
Pharmaceutical forms	Powder and solvent for suspension for injection, Suspension for injection, Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details: rMenB+OMV NZ vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each. MenC-CRM vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each. Synflorix: Administration was done IM, 3 doses + booster.	

Arm title	B_02_6_10
Arm description: Subjects 6-10 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start.	
Arm type	Experimental
Investigational medicinal product name	Meningococcal (group B) multicomponent recombinant adsorbed vaccine
Investigational medicinal product code	
Other name	rMenB+OMV NZ
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

rMenB+OMV NZ vaccine: Administration was done IM, 2 doses + booster, of 0.5 mL each.

Subject analysis set type	Safety analysis
Subject analysis set description: Subjects, 6-10 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start.	
Subject analysis set title	B_02
Subject analysis set type	Full analysis
Subject analysis set description: Subjects, 2-10 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start. rMenB + OMV NZ vaccine: 2 doses 2 months apart	

Primary: Percentages of Subjects with Serum Bactericidal Activity Using Human Serum (hSBA) Titers ≥ 4 or hSBA Titers ≥ 5 (Strain M10713) Following a 2-dose Primary Series of rMenB+OMV Vaccination

End point title	Percentages of Subjects with Serum Bactericidal Activity Using Human Serum (hSBA) Titers ≥ 4 or hSBA Titers ≥ 5 (Strain M10713) Following a 2-dose Primary Series of rMenB+OMV Vaccination ^{[1][2]}
End point description: Immunogenicity was assessed in terms of percentages of subjects with hSBA titers ≥ 4 against N meningitidis serogroup B strains H44/76, 5/99, NZ98/254 and hSBA titers ≥ 5 against strain M10713 following 2-dose primary series of vaccination with rMenB+OMV NZ at 3.5 and 5 months of age or at 6 and 8 months of age. Analysis was done on Full analysis set (FAS)-Primary series.	
End point type	Primary
End point timeframe: 1 month after second vaccination	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There was no statistical null hypothesis associated with this immunogenicity objective.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There was no statistical null hypothesis associated with this immunogenicity objective.

Secondary: Number of Subjects Reporting Unsolicited AEs Following Any Vaccination with rMenB+OMV NZ in Groups B_02_2_5 and B_02_6_10

End point title	Number of Subjects Reporting Unsolicited AEs Following Any Vaccination with rMenB+OMV NZ in Groups B_02_2_5 and B_02_6_10 ^[20]
-----------------	---

End point description:

Safety was assessed in terms of number of subjects reporting any unsolicited AEs (day 1-7 after any vaccination), serious adverse events (SAEs), medically attended AEs, AEs leading to premature

withdrawal from the study (collected throughout the study period) following any vaccination with rMenB+OMV NZ. Analysis was done on unsolicited safety set.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 to Day 7 (All AEs). Throughout the study period (SAEs, medically attended or leading to premature withdrawal AEs)

Notes:

[20] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: All safety analyses were run in the safety population.

End point values	B_02_2_5	B_02_6_10		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	104	300		
Units: Subjects				
All AEs (days 1-7)	58	101		
At least possible related AEs	16	24		
SAEs	1	2		
At least possibly related SAEs	0	0		
Medically attended AEs	42	74		
AEs leading to premature withdrawal	0	0		
Deaths	0	0

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 12 months of age for groups B_2h3h5_11, B_3h5_11 and B_68_11; Day 1 to Day 91 for groups B02_2_5 and B02_6_10; Day 1 to Day 301 for group BC_35_12; Day 1 to Day 391 for group C_35_12

Adverse event reporting additional description:

All solicited AEs were collected by systematic assessment and unsolicited AEs were collected by non-systematic assessment.

Assessment type	Non-systematic

Reporting groups

Reporting group title	B_68_11
-----------------------	---------

Reporting group description:

Subjects, approximately 6 months of age received 2 dose primary vaccination of rMenB+OMV NZ at 6 and 8 months of age, followed by a booster dose at 11 months of age.

Reporting group title	B_3h5_11
-----------------------	----------

Reporting group description:

Subjects, approximately 3.5 months of age received 2 dose primary vaccination of rMenB+OMV NZ at 3.5 and 5 months of age, followed by a booster dose at 11 months of age.

Reporting group title	B_2h3h5_11
-----------------------	------------

Reporting group description:

Subjects, approximately 2.5 months of age received 3 dose primary vaccination of rMenB+OMV NZ at 2.5, 3.5, 5 months of age, followed by a booster dose at 11 months of age

Reporting group title	C_35_12
-----------------------	---------

Reporting group description:

Subjects, 3 months of age received MenCCRM and Synflorix concomitantly at 3, 5 and 12 months of age and an additional dose of Synflorix alone at 7 months of age and rMenB+OMV NZ alone at 13 and 15 months of age.

Reporting group title	BC_35_12
-----------------------	----------

Reporting group description:

Subjects, 3 months of age received rMenB+OMV NZ + MenC-CRM and Synflorix concomitantly at 3, 5 and 12 months of age and an additional dose of Synflorix alone dose at 7 months of age

Reporting group title	B_02_6_10
-----------------------	-----------

Reporting group description:

Subjects, 6-10 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start.

Reporting group title	B_02_2_5
-----------------------	----------

Reporting group description:

Subjects, 2-5 years of age received 2 catch-up doses of rMenB+OMV NZ, each at 0 and 2 months. Blood draw at 0 and 3 months since study start.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 May 2011	Alignment of the protocol with the actual SAE notification and reporting process
20 February 2012	New arms to test concomitant MenB + MenC administration
29 August 2013	hSBA cut-off adjustment following serological test outsource
26 November 2013	Inclusion of an interim analysis on a subset of subjects in Group II - End of trial definition

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
