## Results analysis stage

---

Analysis stage	Final
Date of interim/final analysis	26 May 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 November 2019
Was the trial ended prematurely?	No

---

Notes:

---

## General information about the trial

---

Main objective of the trial:

PADIMAC is a phase II study designed as a single arm study to evaluate the safety of a no treatment option for patients achieving CR/VGPR post induction therapy on the PAD regimen and not proceeding to ACST.

The main objective of the study is to provide a reliable estimate of the 2-year progression-free survival (PFS) for patients who, having achieved CR/VGPR following PAD therapy (measured following peripheral blood stem cell harvest, PBSCH), do not receive any further treatment until clinical indication of relapse. This is addressed separately for patients who are minimal residual disease positive (MRD+), and those who are MRD negative (MRD-), at end of induction therapy.

---

Protection of trial subjects:

Pregnancy testing prior to each treatment cycle was mandated for all women of child bearing potential, due to the unknown risk from bortezomib exposure to human embryo /foetus, crossing of dexamethasone through the placenta causing possible foetal development abnormalities and possible teratogenicity of doxorubicin. All patients had to consent to trial acceptable methods of contraception during the study and for six months post trial treatment. Due to the possible effect of doxorubicin on male fertility, for safety reasons, men wanting babies were advised on sperm cryopreservation prior to trial treatment.

Patients who did not achieve at least a PR following trial treatment, immediately went on to receive salvage treatment. Patients who were assigned to no further treatment, following trial treatment and a negative MRD result, were offered off-trial ASCT on relapse. Cardiac function assessment was done at the end of trial treatment, due to possible cardiotoxicity from doxorubicin.

Local supportive care protocols including antiemetic schedules, mesna, thromboprophylaxis (to prevent tumour lysis), transfusion support, mouthcare and prophylactic antimicrobial therapy were followed as required.

Prior to each trial treatment dose, patients were evaluated for possible toxicities that might have occurred from the previous dose. For each of the trial drugs, dose modifications were put in place for specific haematological and non-haematological toxicities. Treatment delays were also allowed for toxicities that were not related to any of the trial drugs.

---

Background therapy:

Patients who achieved at least a partial response (PR) following the trial treatment received PBSC Mobilisation before peripheral blood stem cell harvest (PBSCH):  
Cyclophosphamide, iv infusion in 500 ml NaCl 0.9%, 1.5-3 g/m<sup>2</sup>  
G-CSF, subcutaneous, 5-10 mcg/kg/day or 150 mcg/m<sup>2</sup>/day

Patients who achieved a partial response (PR) with adequate PBSCH, received high dose melphalan with autologous stem cell rescue (ASCT):

NaCl 0.9% + 20 mmol KCl, 1 litre/hour

Furosemide, 20 to 40 mg, IV stat

Dexamethasone, 8 mg, IV stat

Granisetron, 3 mg, IV stat

Melphalan, 200 mg/m<sup>2</sup>, short infusion (as per local protocol) in 100 ml NaCl 0.9%

NaCl 0.9%, 1 litre over 2 hours + KCl 20 mmol to maintain urine output of at least 500 ml/hr

NaCl 0.9% + KCl 1 litre four hourly x 1

NaCl 0.9% + KCl 1 litre six hourly x 3

---

Evidence for comparator: -	
Actual start date of recruitment	01 April 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 153
Worldwide total number of subjects	153
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	129
From 65 to 84 years	24
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

14 UK sites were opened to participate in the trial over a period of 2 years (09/03/2011 to 13/03/2013). Of these, only 13 recruited patients into the trial.

A total of 153 patients were recruited over 2 years and 9 months (01/04/2011 - 14/01/2014), a planned increase from the initial 120 target.

### Pre-assignment

Screening details:

Patients aged  $\geq 18$  years with previously untreated symptomatic myeloma were screened. They had to have measurable disease, suitable for high dose therapy and ASCT, adequate full blood count, renal, cardiac, pulmonary and hepatobiliary functions. Patients with  $\geq$ Gr2 peripheral neuropathy/neuropathic pain were excluded. Screening logs were maintained.

### Period 1

Period 1 title	Main trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	PAD Regimen
-----------	-------------

Arm description:

Bortezomib (Velcade), Doxorubicin and Dexamethasone

Arm type	Experimental
Investigational medicinal product name	Bortezomib
Investigational medicinal product code	L01XX32
Other name	Velcade
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

At the start of the trial, bortezomib was given twice weekly in combination with Doxorubicin and Dexamethasone (PAD) at a dose of  $1.3\text{mg}/\text{m}^2$  as a bolus IV injection on days 1, 4, 8 and 11 of each 21-day cycle for a minimum of 4 cycles to a maximum of 6 cycles. It was given with doxorubicin on days 1 & 4 and with dexamethasone on days 1 & 4 for every cycle and days 8 & 11 for the first cycle only. Dose was calculated on D1 of each cycle and same dose was administered through out the days of that cycle. If a notable change in weight occurred within a cycle, as determined by an unscheduled weight assessment, dose was to be recalculated at that time.

Following protocol amendments, bortezomib administration was changed to subcutaneous (2011) and then to either subcutaneous or intravenous routes (2014) using the same schedule. The preferred route of administration was subcutaneous, but IV injection was allowed only if a patient experienced  $\geq$ Gr2 SC injection site reactions.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	L01DB01
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

$9\text{mg}/\text{m}^2$  /day as continuous IV infusion or by IV bolus injection, on days 1 - 4 of each 21 day cycle (minimum 4, maximum 6).

Doxorubicin was given with bortezomib on days 1 & 4, and with dexamethasone on days 1 - 4. Dose was calculated on D1 of each cycle and same dose was administered through out the days of that cycle.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	A01AC02, C05AA09
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

40 mg/day on days 1 - 4 of each 21 day cycle (minimum of 4 and a maximum of 6). For the first cycle only, it was also administered on days 8 - 11 and days 15 - 18.

It was given, in every cycle, with doxorubicin on days 1 - 4 and with bortezomib on days 1 & 4 (and days 8 & 11 for the first cycle only).

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All adverse events (including serious) that occur between first administration of trial treatment (PAD) and 30 days post last trial treatment (PAD) administration (or after this date if thought to be related to the trial treatment)

Adverse event reporting additional description:

Trial subjects were assessed for adverse events (AEs) prior the start of each PAD cycle. All AEs were recorded in the patient notes and the trial CRFs. Those meeting the definition of Serious, excluding exempted events, were to be reported using the trial specific SAE Reporting template within 24 hours of observing or learning of the event.

Assessment type	Systematic

subjects affected / exposed occurrences (all)	15 / 153 (9.80%) 15		
Paresthesia subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Dizziness subjects affected / exposed occurrences (all)	36 / 153 (23.53%) 36		
Peripheral motor neuropathy subjects affected / exposed occurrences (all)	20 / 153 (13.07%) 20	Additional description: Reported as 'Neuropathy ( motor)'	
Blood and lymphatic system disorders Anaemia subjects affected / exposed occurrences (all)	56 / 153 (36.60%) 56		
Eye disorders blurred vision subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Gastrointestinal disorders Vomiting subjects affected / exposed occurrences (all)	40 / 153 (26.14%) 40		
Abdominal pain subjects affected / exposed occurrences (all)	19 / 153 (12.42%) 19		
Constipation subjects affected / exposed occurrences (all)	83 / 153 (54.25%) 83		
Diarrhoea subjects affected / exposed occurrences (all)	51 / 153 (33.33%) 51		
Nausea subjects affected / exposed occurrences (all)	67 / 153 (43.79%) 67		
Skin and subcutaneous tissue disorders			

Erythema multiforme subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Alopecia subjects affected / exposed occurrences (all)	27 / 153 (17.65%) 27		
Rash subjects affected / exposed occurrences (all)	40 / 153 (26.14%) 40		
Musculoskeletal and connective tissue disorders			
Back pain subjects affected / exposed occurrences (all)	53 / 153 (34.64%) 53		
Bone pain subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Pain in extremity subjects affected / exposed occurrences (all)	12 / 153 (7.84%) 12	Additional description: Reported as pain in lower limbs	
Pain - hip subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Infections and infestations			
Infection subjects affected / exposed occurrences (all)	10 / 153 (6.54%) 10		
infection and infestation - other subjects affected / exposed occurrences (all)	10 / 153 (6.54%) 10		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	28 / 153 (18.30%) 28		
Metabolism and nutrition disorders			
Hypercalcaemia subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		

Hyperglycaemia subjects affected / exposed occurrences (all)	8 / 153 (5.23%) 8		
Hyponatraemia subjects affected / exposed occurrences (all)	10 / 153 (6.54%) 10		
Anorexia and bulimia syndrome subjects affected / exposed occurrences (all)	20 / 153 (13.07%) 20		

Additional description: Reported as 'Anorexia'

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 July 2011	<p>Protocol was amended to allow the following:</p> <ul style="list-style-type: none"><li>- IV administration of bortezomib was replaced with subcutaneous administration</li><li>- IV bolus injection administration of doxorubicin, administration of doxorubicin over 4 days (total dose 36/mg/m<sup>2</sup>)</li><li>- inclusion criterion for Creatinine Clearance was changed from <math>\geq 30</math> mL/min to <math>\geq 20</math> mL/min</li><li>- Serum free light chain assay was made mandatory post PBSCH and 100 days post PBSCH/ASCT</li></ul> <p>Patient Information Sheet (PIS) was updated to include:</p> <ul style="list-style-type: none"><li>- information on changed routes of administration for bortezomib and doxorubicin</li><li>- additional details on effective contraception</li></ul>
29 November 2011	<p>Urgent Safety Measure - There was an precautionary recall of the supplied bortezomib, Velcade, following a 'Dear Investigator' letter from the supplier. Due to GMP compliance issues identified at Ben Venue Laboratories, BVL, Ohio, USA, one of the manufacturing facilities for Velcade, there was a recall of batches manufactured at this site. Some of the clinical trial subcutaneous (SC) Velcade stock for the trial were affected and immediate action had to be taken as it was detrimental for patients not to receive treatment.</p> <p>The urgent measure taken was to allow patients to be treated subcutaneously using IV labelled trial supply, once it was confirmed by the manufacturer (Janssen) that the IV and SC formulations were the same. A site, where IV labelled supply was not available, was given the go ahead following confirmation from Janssen to administer the SC labelled supply from the affected batch to their patients. All sites were to revert to using new batches of unaffected sc labelled trial supply once received. Increased monitoring of adverse events at sites was advised. The plan of actions to be taken were discussed with the REC and MHRA before implementation.</p>
30 November 2012	<p>Protocol amendment: changes were made to protocol v2</p> <ul style="list-style-type: none"><li>- IV administration of bortezomib was allowed as an alternative route</li><li>- Inclusion criteria states inclusion of patients with ECOG PS of 0-3. Patients with an ECOG performance score of <math>&gt;3</math> when this score is due to disease processes such as spinal cord compression, and who would otherwise have a score of <math>\leq 3</math>, were included in the trial</li><li>- exclusion of patients with active HIV, hepatitis B or C infection</li></ul> <p>Detailed information on toxicity assessment, sample collection and other relevant information, were also included.</p> <p>The PIS was updated to include detailed explanation on side effects of bortezomib for both SC and IV routes, and other relevant updates made to the protocol.</p>
29 August 2014	<p>Target accrual number was increased from 120 to 153</p> <p>Protocol was amended as follows:</p> <ul style="list-style-type: none"><li>- Additional assessments and samples at relapse</li><li>- RSI for subcutaneous bortezomib was changed from the Investigator's Brochure to the SPC</li></ul>

04 December 2014	Protocol was amended as follows: <ul style="list-style-type: none"><li>- Update to the trial endpoints and outcome measures: PFS2 (time from start of salvage treatment to 2nd relapse) and OS (overall survival) were added as secondary endpoints</li><li>- Update to the outcome measures and assessment of the measures for the trial</li><li>- Update to the long term follow-up schedule for the trial due to the addition of OS as a secondary endpoint</li><li>- Update to the End of Trial definition</li></ul>
------------------	--

Notes:

---

### **Interruptions (globally)**

Were there any global interruptions to the trial? No

### **Limitations and caveats**

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Non-serious AEs: 'occurrences all number' can't be provided as only highest grade experienced by patients are collected on CRFs; number of subjects affected has been entered.
