

Clinical trial results:

A single-arm, open-label, phase 2 clinical trial evaluating disease response following treatment with intravenous BHQ880, a fully human, anti-Dickkopf1 (DKK1) neutralizing antibody in previously untreated patients with high-risk, smoldering multiple myeloma

Summary

EudraCT number	2010-022029-13
Trial protocol	DE
Global end of trial date	27 November 2013

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 November 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 November 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the overall response rate after BHQ880 treatment in previously untreated patients with high-risk smoldering multiple myeloma (SMM).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Since there are no specific rescue medications for BHQ880, acute allergic reactions or infusion-related reactions could be treated as clinically indicated using accepted guidelines. This included, in the event of anaphylactic reactions, any and all therapies necessary to restore normal cardiopulmonary status. Prophylactic pre-medication could be added if a patient experienced an infusion reaction and sites could then use their own institutional standard of care.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 May 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	United States: 30
Worldwide total number of subjects	41
EEA total number of subjects	11

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	24
From 65 to 84 years	17
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients were screened for eligibility over a period of 28 days.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BHQ880 10mg/kg
------------------	----------------

Arm description:

Subjects received BHQ880 for a maximum of twelve 28-day cycles.

Arm type	Experimental
Investigational medicinal product name	BHQ880
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

BHQ880 was administered at 10 mg/kg in 250 mL of a 5% Dextrose Injection United States Pharmacopeia (USP) or equivalent over 2 hours on Day 1 of a 28-day treatment cycle. The actual body weight in kilograms (kg) recorded at screening was used to calculate the dose for all patients.

Number of subjects in period 1	BHQ880 10mg/kg
Started	41
Completed	26
Not completed	15
Subject withdrew consent	1
Disease progression	11
Adverse event, non-fatal	2
Administrative problems	1

Baseline characteristics

Reporting groups

Male	31	31	

End points

End points reporting groups

Reporting group title	BHQ880 10mg/kg
Reporting group description:	
Subjects received BHQ880 for a maximum of twelve 28-day cycles.	

Primary: Number of Subjects With Overall Response (OR) of Minor Response (MR) or Better After 6 Months of Treatment with BHQ880

End point title	Number of Subjects With Overall Response (OR) of Minor Response (MR) or Better After 6 Months of Treatment with BHQ880 ^[1]
-----------------	---

End point description:

The Overall Response (OR) was defined as MR or better, with better being partial, very good partial, or complete response. Multiple myeloma (MM) response was evaluated by using modified international multiple myeloma working group (IMWG) criteria. This assessment included M-protein quantification and serum free light chain (FLC) assay following administration of BHQ880. Additionally, urine specimens for M-protein quantification and urine immunofixation, serum samples for serum immunofixation, bone marrow biopsy and aspirate, skeletal surveys, and magnetic resonance imaging (MRI) of the spine were also collected.

This endpoint analyzed the Full Analysis Set (FAS), defined as all patients who received at least one dose (full or partial) of BHQ880.

End point type	Primary
----------------	---------

End point timeframe:

Six 28-day treatment cycles

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this primary outcome measure.

End point values	BHQ880 10mg/kg			
Subject group type	Reporting group			
Number of subjects analysed	41			
Units: subjects	0			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Subjects With Overall Response (OR) of Minor Response (MR) or Better After 12 Months of Treatment with BHQ880

End point title	Number of Subjects With Overall Response (OR) of Minor Response (MR) or Better After 12 Months of Treatment with BHQ880
-----------------	---

End point description:

The Overall Response (OR) was defined as MR or better, with better being partial, very good partial, or complete response. Multiple myeloma (MM) response was evaluated by using modified international multiple myeloma working group (IMWG) criteria. End point description:

Pharmacokinetic (PK) parameters were determined for BHQ880 by using non-compartmental methods from the serum concentrations. Blood samples for PK evaluation were drawn pre-infusion and at 2 (± 5 minutes), 24 (± 1 hour), 168, 336, 504, and 672 hours post-infusion during Cycles 1 and 4 and pre-infusion on Day 1 of Cycle 3. Blood samples for BHQ880 serum concentration-time profiles were collected from 15 patients for full PK profiling. Sample volume was 5 mL. Parameters are summarized for a single dose (Cycle 1) and after repeated dosing (Cycle 4). This endpoint analyzed the Pharmacokinetic Analysis Set (PAS), defined as all patients in the Full Analysis Set (FAS) who had at least one blood sample providing evaluable PK data from either Cycle 1 or 4. The FAS was defined as all patients who received at least one dose (full or partial) of BHQ880.

Pain in extremity subjects affected / exposed occurrences (all)	6 / 41 (14.63%) 7		
Infections and infestations			
Nasopharyngitis subjects affected / exposed occurrences (all)	5 / 41 (12.20%) 7		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	5 / 41 (12.20%) 5		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 January 2012	<p>This amendment introduced the following important changes:</p> <p>The main purpose of the amendment was to modify the prohibition on concomitant hormone replacement therapy for patients who have been receiving that therapy for at least 6 months. Patients who had been receiving long-term hormone replacement therapy and for whom those effects on bone would be considered stable could be enrolled in the study without having to discontinue that therapy.</p> <p>In addition, the analyses of several serum bone biomarkers which supported a secondary endpoint were removed. The requirement for assessment of vital signs during and after drug infusion was also removed, based on the data and safety profile from Phase I studies.</p> <p>For improved site and patient compliance and protocol execution, time windows around laboratory assessments were added and redundant laboratory testing was removed.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
