

Clinical trial results:

A Phase IIb Randomized, Placebo- and Active Comparator (Tolterodine)-Controlled, 2-Part Clinical Study of the Efficacy and Safety of MK-4618 in Patients with Overactive Bladder

A 52-week Extension to: A Phase IIb Randomized, Placebo- and Active Comparator (Tolterodine)-Controlled, 2-Part Clinical Study of the Efficacy and Safety of MK-4618 in Patients with Overactive Bladder

Summary

EudraCT number	2010-022121-15
Trial protocol	SE DE GB DK AT NO PL IT
Global end of trial date	10 October 2013

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 October 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	22 October 2012
Global end of trial reached?	Yes
Global end of trial date	10 October 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

(1.) To investigate a dose-related reduction in average number of daily micturitions of vibegron compared with placebo at Week 8 in participants with Overactive Bladder (OAB). (2.) To assess the safety and tolerability of treatment with the selected vibegron (MK-4618) doses either alone or dosed concomitantly with tolterodine ER.

The primary hypothesis of the base study is that administration of vibegron demonstrates a dose-related reduction, compared with placebo, in average number of daily micturitions in participants with OAB after 8 weeks of treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 March 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 75
Country: Number of subjects enrolled	Poland: 38
Country: Number of subjects enrolled	Sweden: 47
Country: Number of subjects enrolled	United Kingdom: 67
Country: Number of subjects enrolled	Austria: 9
Country: Number of subjects enrolled	Denmark: 47
Country: Number of subjects enrolled	Germany: 104
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	United States: 525
Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	Japan: 288
Country: Number of subjects enrolled	Korea, Republic of: 38

Country: Number of subjects enrolled	Mexico: 3
Country: Number of subjects enrolled	New Zealand: 20
Country: Number of subjects enrolled	Peru: 35
Country: Number of subjects enrolled	Puerto Rico: 5
Country: Number of subjects enrolled	Russian Federation: 15
Country: Number of subjects enrolled	South Africa: 54
Worldwide total number of subjects	1395
EEA total number of subjects	391

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	982
From 65 to 84 years	413
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

This was a 2-Part, randomized, double blind placebo- and active-controlled, parallel-group study of vibegron in men and women with OAB. Participants enrolled in Part 1 were not eligible to participate in Part 2. Participants who completed Part 1 or Part 2 were eligible to enroll in an optional 1-year safety extension.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1: placebo

Arm description:

Participants received two placebo matching vibegron tablets and one placebo matching tolterodine extended release (ER) capsule, taken orally each morning, for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo matching vibegron tablets, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Arm title	Part 1: vibegron 3 mg
------------------	-----------------------

Arm description:

Participants received one vibegron 3 mg tablet, one placebo matching vibegron tablet, and one placebo matching tolterodine ER capsule, taken orally each morning, for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Other use
Dosage and administration details:	
Participants received a placebo matching tolterodine ER capsule, taken orally each morning.	
Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received placebo matching vibegron tablets, taken orally each morning.	
Arm title	Part 1: vibegron 15 mg
Arm description:	
Participants received one vibegron 15 mg tablet, one placebo matching vibegron tablet, and one placebo matching tolterodine ER capsule, taken orally each morning, for 8 weeks.	
Arm type	Experimental
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.	
Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received a placebo matching tolterodine ER capsule, taken orally each morning.	
Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received placebo matching vibegron tablets, taken orally each morning.	
Arm title	Part 1: vibegron 50 mg
Arm description:	
Participants received one vibegron 50 mg tablet, one placebo matching vibegron tablet, and one placebo matching tolterodine ER capsule, taken orally each morning, for 8 weeks.	
Arm type	Experimental
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.

Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
Participants received placebo matching vibegron tablets, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:
Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Arm title	Part 1: vibegron 100 mg
------------------	-------------------------

Arm description:
Participants received two vibegron 50 mg tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 8 weeks.

Arm type	Active comparator
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:
Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Arm title	Part 1: tolterodine ER 4 mg
------------------	-----------------------------

Arm description:
Participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 8 weeks.

Arm type	Active comparator
Investigational medicinal product name	tolterodine ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:
Participants received one tolterodine ER 4 mg capsule, taken orally once a day.

Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo matching vibegron tablets, taken orally each morning.

Arm title	Part 1: vibegron 50 mg + tolterodine ER 4 mg/vibegron 50 mg
------------------	---

Arm description:

Participants received one vibegron 50 mg tablet and one placebo matching vibegron tablet, taken orally each morning, for 8 weeks. They also received one tolterodine ER 4 mg capsule for the first 4 weeks and one placebo matching tolterodine ER capsule for the second 4 weeks, both taken orally each morning.

Arm type	Experimental
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.

Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

participants received placebo matching vibegron tablets, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Investigational medicinal product name	tolterodine ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received one tolterodine ER 4 mg capsule, taken orally each morning.

Arm title	Part 2: placebo
------------------	-----------------

Arm description:

Participants received two placebo matching vibegron tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 4 weeks.

Arm type	Placebo
Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received placebo matching vibegron tablets, taken orally each morning.	
Arm title	Part 2: vibegron 100 mg
Arm description:	
Participants received two vibegron 50 mg tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 4 weeks.	
Arm type	Experimental
Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received a placebo matching tolterodine ER capsule, taken orally each morning.	
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.	
Arm title	Part 2: tolterodine ER 4 mg
Arm description:	
Participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 4 weeks.	
Arm type	Active comparator
Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received placebo matching vibegron tablets, taken orally each morning.	
Investigational medicinal product name	tolterodine ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received one tolterodine ER 4 mg capsule, taken orally once a day.	
Arm title	Part 2: vibegron 100 mg + tolterodine ER 4 mg
Arm description:	
Participants received two vibegron 50 mg tablets and one tolterodine ER 4 mg capsule, taken orally each morning, for 4 weeks.	
Arm type	Experimental

Investigational medicinal product name	tolterodine ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received one tolterodine ER 4 mg capsule, taken orally once a day.

Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	MK-4618
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg depending on their vibegron Arm assignment, taken orally each morning.

Period 2

Period 2 title	Extension Study
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Extension Study: vibegron 50 mg

Arm description:

Participants in Base Study/Part 1 who received vibegron 50 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received vibegron 3 mg received vibegron 50 mg in the Extension Study. Also, participants in Base Study/Part 1 who received vibegron 50 mg + tolterodine ER for 4 weeks, followed by vibegron 50 mg alone for 4 weeks, remained on vibegron 50 mg in the Extension Study. In the extension, participants received one vibegron 50 mg tablet, one placebo matching vibegron tablet, and one placebo matching tolterodine ER capsule, taken orally each morning, for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants were randomized to receive vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg, taken orally each morning.

Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Investigational medicinal product name	placebo matching vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received placebo matching vibegron tablets, taken orally each morning.

Arm title	Extension Study: vibegron 100 mg
------------------	----------------------------------

Arm description:

Participants in Base Study/Part 1 or Part 2 who received vibegron 100 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received vibegron 15 mg received vibegron 100 mg in the Extension Study. In the extension, participants received two vibegron 50 mg tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	placebo matching tolterodine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received a placebo matching tolterodine ER capsule, taken orally each morning.

Investigational medicinal product name	vibegron
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received vibegron tablets at dosages of 3 mg, 15 mg, 50 mg, or 100 mg, taken orally each morning.

Arm title	Extension Study: tolterodine ER 4 mg
------------------	--------------------------------------

Arm description:

Participants in Base Study/Part 1 or Part 2 who received tolterodine ER 4 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received placebo also received tolterodine ER 4 mg in the Extension Study. In the extension, participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 52 weeks.

Arm type	Active comparator
Investigational medicinal product name	placebo matching vibegron

Reporting group title	Part 1: tolterodine ER 4 mg
Reporting group description: Participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 8 weeks.	
Reporting group title	Part 1: vibegron 50 mg + tolterodine ER 4 mg/vibegron 50 mg
Reporting group description: Participants received one vibegron 50 mg tablet and one placebo matching vibegron tablet, taken orally each morning, for 8 weeks. They also received one tolterodine ER 4 mg capsule for the first 4 weeks and one placebo matching tolterodine ER capsule for the second 4 weeks, both taken orally each morning.	
Reporting group title	Part 2: placebo
Reporting group description: Participants received two placebo matching vibegron tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 4 weeks.	
Reporting group title	Part 2: vibegron 100 mg
Reporting group description: Participants received two vibegron 50 mg tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 4 weeks.	
Reporting group title	Part 2: tolterodine ER 4 mg
Reporting group description: Participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 4 weeks.	
Reporting group title	Part 2: vibegron 100 mg + tolterodine ER 4 mg
Reporting group description: Participants received two vibegron 50 mg tablets and one tolterodine ER 4 mg capsule, taken orally each morning, for 4 weeks.	
Reporting group title	Extension Study: vibegron 50 mg
Reporting group description: Participants in Base Study/Part 1 who received vibegron 50 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received vibegron 3 mg received vibegron 50 mg in the Extension Study. Also, participants in Base Study/Part 1 who received vibegron 50 mg + tolterodine ER for 4 weeks, followed by vibegron 50 mg alone for 4 weeks, remained on vibegron 50 mg in the Extension Study. In the extension, participants received one vibegron 50 mg tablet, one placebo matching vibegron tablet, and one placebo matching tolterodine ER capsule, taken	

orally each morning, for 52 weeks.

Reporting group title	Extension Study: vibegron 100 mg
-----------------------	----------------------------------

Reporting group description:

Participants in Base Study/Part 1 or Part 2 who received vibegron 100 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received vibegron 15 mg received vibegron 100 mg in the Extension Study. In the extension, participants received two vibegron 50 mg tablets and one placebo matching tolterodine ER capsule, taken orally each morning, for 52 weeks.

Reporting group title	Extension Study: tolterodine ER 4 mg
-----------------------	--------------------------------------

Reporting group description:

Participants in Base Study/Part 1 or Part 2 who received tolterodine ER 4 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 1 who received placebo also received tolterodine ER 4 mg in the Extension Study. In the extension, participants received one tolterodine ER 4 mg capsule and two placebo matching vibegron tablets, taken orally each morning, for 52 weeks.

Reporting group title	Extension Study: vibegron 100 mg + tolterodine ER 4 mg
-----------------------	--

Reporting group description:

Participants in Base Study/Part 1 who received vibegron 100 mg + tolterodine ER 4 mg continued their treatment in the Extension Study. In addition, participants in Base Study/Part 2 who received placebo were assigned to the vibegron 100 mg + tolterodine ER 4 mg arm in the Extension Study. In the extension, participants received two vibegron 50 mg tablets and one tolterodine ER 4 mg capsule, taken orally each morning, for 52 weeks.

Primary: Base Study/Part 1: Change from Baseline in Average Daily Number of Micturitions at Week 8

End point title	Base Study/Part 1: Change from Baseline in Average Daily Number of Micturitions at Week 8 ^[1]
-----------------	--

End point description:

Participants were required to keep a voiding diary, recording the occurrence of each micturition. The average daily number of micturitions was calculated as the total number of micturitions that occurred over a week (4 to 10 days) during the Base Study, divided by the total number of days of voiding kept in the participant's diary. Baseline was defined as the average daily number of daily micturitions that occurred during the week of placebo run-in prior to Week 0 visit. This endpoint was based on the full analysis set population, which included all randomized participants who received at least one dose of study treatment and have either baseline data or at least one post-randomization observation for the analysis endpoint.

End point type	Primary
----------------	---------

End point timeframe:

Baseline and Week 8

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Participants in this treatment group took MK-4618 50 mg + tolterodine ER 4 mg for the first 4 weeks and MK-4618 50 mg in the later 4 weeks. This treatment group was not statistically analyzed.

Secondary: Extension Study: Change From Baseline in Average Daily Number of Micturitions at Week 52

End point title	Extension Study: Change From Baseline in Average Daily Number of Micturitions at Week 52
-----------------	--

End point description:

Participants were required to keep a voiding diary, recording the daily occurrence of each micturition. The average daily number of micturitions was calculated as the total number of recorded micturitions that occurred during the 52-week Extension Study, divided by the total number of days of voiding kept in the participant's diary. Baseline was defined as the value at Week 0 of the Base Study. This endpoint was based on the full analysis set population, which included all randomized participants who received at least one dose of study treatment and have either baseline data or at least one post-randomization observation for the analysis endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Base Study/Part 1: up to 8 weeks; Base Study/Part 2: up to 4 weeks (time frame was additional 2 weeks for Parts 1 and 2 participants not continuing to Extension Study); Extension Study: up to 54 weeks (including 2 week follow-up).

Adverse event reporting additional description:

All participants as treated population consisted of all randomized participants who received at least one dose of study treatment. Participants were included in treatment group corresponding to study treatment they actually received. Two randomized participants who were not treated were excluded from Part 1: vibegron 50 mg arm.

occurrences (all)	33	42	8

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 March 2011	Extension Study, Amendment 008-10. The primary reason for this amendment was to add the 12-month safety and efficacy extension to the base study 008-00. Patients completing the base had the opportunity to receive an additional 1 year of treatment if they participated in the extension.
16 May 2012	Extension Study, Amendment 008-11. The primary reason for this amendment was to update the extension study protocol with the dose of vibegron 100 mg that patients enrolled in Part 2 of the base study who completed it would receive in the extension. Vibegron 100 mg was updated as the monotherapy dose and the dose to be administered concomitantly with tolterodine ER 4 mg. The protocol previously had indicated "X" mg.
16 May 2012	Base Study, Amendment 008-02. The primary reasons for this amendment were as follows: 1) To allow for the inclusion of women of childbearing potential, expanding the age range from 40-75 to 18-75. 2) To update the base protocol with the dose of vibegron for Part 2 of the base study. Vibegron 100 mg was selected as the monotherapy dose and the dose to be administered concomitantly with tolterodine ER 4 mg. The protocol previously had indicated "X" mg. 3) To remove the exclusion criteria that had prohibited use of beta-adrenergic blocking agents (beta blockers), calcium channel blockers, direct acting vasodilators, angiotensin converting enzyme (ACE) inhibitors, and angiotensin II receptor antagonists.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
