Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000056-PIP03-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 January 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	29 January 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the benefit in terms of event-free survival (EFS) of the addition of bevacizumab to postoperative radiotherapy with concomitant and adjuvant temozolomide (TMZ).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 October 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	United Kingdom: 29
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Czech Republic: 4
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	France: 29
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	Canada: 8
Country: Number of subjects enrolled	Australia: 5
Worldwide total number of subjects	124
EEA total number of subjects	111

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	2
Children (2-11 years)	71
Adolescents (12-17 years)	51
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Chemoradiation + temozolomide (TMZ) and Chemoradiation + Bevacizumab + TMZ arms: 174 subjects were screened; 121 were randomised; 116 received study treatment. Young Patient Cohort: 4 subjects were screened; 3 were enrolled and received study treatment (these subjects were not randomised and are not included in efficacy analyses).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Main Cohort: Chemoradiation + TMZ
------------------	-----------------------------------

Arm description:

Subjects received a total dose of 54 Grey (Gy) units delivered in 30 daily fractions of 1.8 Gy over 6 weeks with 75 milligrams per meter squared (mg/m²) TMZ daily for up to 49 days followed by a treatment break of approximately 4 weeks. The treatment break was followed by an adjuvant treatment phase where subjects received 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle.

Arm type	Active comparator
Investigational medicinal product name	Temozolomide (TMZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

75 milligrams per square meter (mg/m²) daily continuous starting concomitantly with the first radiation fraction and ending with the last radiation fraction for a maximum number of treatment days = 49 days. During the TMZ adjuvant treatment phase: TMZ (150 to 200 mg/m²/day) x 12 cycles, 1st cycle 150 mg/m² on Days 1-5, escalated to 200 mg/m² on Days 1-5 from the 2nd cycle onwards depending on the tolerance during the 1st cycle. Cycle length = 28 days.

Arm title	Main Cohort: Chemoradiation + Bevacizumab + TMZ
------------------	---

Arm description:

Subjects received a total dose of 54 Gy units delivered in 30 daily fractions of 1.8 Gy over 6 weeks with 75 mg/m² TMZ daily for up to 49 days followed by a treatment break of approximately 4 weeks. The treatment break was followed by an adjuvant treatment phase where subjects received 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle. Bevacizumab was given concomitantly at a dose of 10 milligrams per kilogram (mg/kg) every 2 weeks throughout the entire treatment period.

Arm type	Experimental
Investigational medicinal product name	Temozolomide (TMZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

75 milligrams per square meter (mg/m²) daily continuous starting concomitantly with the first

radiation fraction and ending with the last radiation fraction for a maximum number of treatment days = 49 days. During the TMZ adjuvant treatment phase: TMZ (150 to 200 mg/m²/day) x 12 cycles, 1st cycle 150 mg/m² on Days 1-5, escalated to 200 mg/m² on Days 1-5 from the 2nd cycle onwards depending on the tolerance during the 1st cycle. Cycle length = 28 days.

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Avastin
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 milligrams per kilogram every 2 weeks during the study for up to 12 cycles, each cycle length of 28 days

Arm title	Bevacizumab + TMZ Young Patient Cohort (YPC)
------------------	--

Arm description:

Subjects aged ≥ 6 months and < 3 years received 10 mg/kg Bevacizumab every 2 weeks and 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle.

Arm type	Experimental
Investigational medicinal product name	Temozolomide (TMZ)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

150 to 200 mg/m²/day from Days 1 to 5 every 28 days for a total of 12 cycles. Cycle length = 28 days.

Investigational medicinal product name	Bevacizumab
Investigational medicinal product code	
Other name	Avastin
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

10 milligrams per kilogram every 2 weeks during the study for up to 12 cycles, each cycle length of 28 days

Primary: Event-Free Survival (EFS) as Assessed by the Central Radiology Review Committee (CRRC)

End point title	Event-Free Survival (EFS) as Assessed by the Central Radiology Review Committee (CRRC) ^[1]
-----------------	---

End point description:

EFS was defined as the time from diagnosis to the earliest occurrence of any of the following: tumor progression, tumor recurrence, second primary non-high-grade glioma (HGG) malignancy or death attributable to any cause. Tumor assessments were conducted using magnetic resonance imaging (MRI) and reviewed by the site-independent CRRC using RANO criteria. Tumor progression was defined as clear clinical progression or \geq 25% increase in the sum of the products of perpendicular diameters of the contrast enhancing lesions compared with the smallest tumor measurement obtained either at baseline (if no decrease was observed) or best response and with the subject on stable or increasing doses of corticosteroids. Tumor recurrence was defined as recurrence after tumor was completely resected (no disease present at baseline). EFS was estimated using the Kaplan-Meier method. Randomised subject population: all randomised subjects regardless of whether they received study treatment.

End point type	Primary
----------------	---------

End point timeframe:

From the time of randomisation to the date of clinical cutoff (up to 1 year)

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Analysis was planned to be performed between arm "Chemoradiation + TMZ" and arm "Chemoradiation + Bevacizumab + TMZ" only

Secondary: Health Status as Measured by the Health Utility Index (HUI)

End point title	Health Status as Measured by the Health Utility Index (HUI) ^[9]
-----------------	--

End point description:

HUI is a preference-based, multi-attribute, health-related instrument specifically developed for use with children. HUI consists of eight attributes of health status: vision, hearing, speech, ambulation, dexterity, emotion, cognition and pain. Each attribute had 5 or 6 levels varying from highly impaired to normal. Each of the eight health dimensions was tested separately and a composite score ranging between 1 (perfect health) and 0 (death) was obtained for subjects aged 5 years or older. Randomised subject population aged 5 years or older with a measure at the specified time point. Here, 'n' represents the number of subjects with a measure at the specified time point. Here, '99999' represents that the confidence interval is not applicable because a single subject was analyzed; and '999999' represents data that is not available because no subjects were analyzed.

End point type	Secondary

Secondary: Neurological Psychological Function as Measured by the Wechsler Scale

End point title	Neurological Psychological Function as Measured by the Wechsler Scale ^[10]
-----------------	---

End point description:

The Wechsler Intelligence Scale for Children version IV (WISC-IV) was used to generate a full scale IQ which represents a child's general intellectual ability. The average IQ score is 100, with lower scores representing lower intellectual ability. Randomised subject population included all randomised subjects regardless of whether they received study treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

End of treatment (approximately 58 weeks post-baseline)

Notes:

[10] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Analysis was planned to be performed between arm "Chemoradiation + TMZ" and arm "Chemoradiation + Bevacizumab + TMZ" only

End point values	Main Cohort: Chemoradiatio n + TMZ	Main Cohort: Chemoradiatio n + Bevacizumab + TMZ		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	59	62		
Units: units on a scale				
geometric mean (standard deviation)	92 (± 9.8)	97 (± 18.4)

Reporting groups

Reporting group title	Chemoradiation + TMZ
-----------------------	----------------------

Reporting group description:

Subjects received a total dose of 54 Gy units delivered in 30 daily fractions of 1.8 Gy over 6 weeks with 75 mg/m² TMZ daily for up to 49 days followed by a treatment break of approximately 4 weeks. The treatment break was followed by an adjuvant treatment phase where subjects received 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle.

Reporting group title	Chemoradiation + Bevacizumab + TMZ
-----------------------	------------------------------------

Reporting group description:

Subjects received a total dose of 54 Gy units delivered in 30 daily fractions of 1.8 Gy over 6 weeks with 75 mg/m² TMZ daily for up to 49 days followed by a treatment break of approximately 4 weeks. The treatment break was followed by an adjuvant treatment phase where subjects received 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle. Bevacizumab was given concomitantly at a dose of 10 milligrams per kilogram (mg/kg) every 2 weeks throughout the entire treatment period.

Reporting group title	Bevacizumab + TMZ Young Patient Cohort (YPC)
-----------------------	--

Reporting group description:

Subjects aged ≥ 6 months and < 3 years received 10 mg/kg Bevacizumab every 2 weeks and 150 to 200 mg/m² of TMZ daily on Days 1-5 of each cycle. TMZ was given at a dose of 150 mg/m² on Days 1-5 of cycle 1 and then escalated to 200 mg/m² on days 1-5 from cycle 2 onwards depending on the tolerance during the 1st cycle.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 April 2012	Added a cohort of 10 younger patients below 3 years of age into a separate arm of the main study for treatment at the request of the EMA Pediatric Committee (PDCO). Added the availability of a baseline MRI scan to the inclusion criteria. Added EFS as determined by the CRRC as secondary endpoint. Added an interim pharmacokinetic (PK) analysis for the first 10 patients randomised to the bevacizumab arm in order to align with the paediatric investigation plan (PIP) requirement.
14 July 2013	Modified the primary endpoint to become a blinded site-independent central radiology committee reviewed EFS, and consequently implemented a site-independent central radiology review process for the primary endpoint. Clarified that assessment of efficacy and disease progression or recurrence evaluation were to be performed according to the Wen et al 2010 publication. Added secondary endpoints of ORR and functional changes in tumor diffusion/perfusion MRI (multi modal imaging) for correlative analysis with structural imaging and efficacy outcome measures. The endpoints of Health Utility Index (HUI) and intelligence quotient (IQ) measurements, which were previously exploratory endpoints, were redefined as secondary endpoints. Extended the study population to patients with selected tumors in the infratentorial region (i.e., cerebellar or peduncular localized HGG) characterized by relatively similar history of disease as supratentorial HGGs, similar treatment options and response, and prognostically and biologically distinct from the more aggressive brainstem tumors (i.e., diffuse intrinsic pontine gliomas, medulla oblongata, or other midbrain tumours).
11 September 2014	Added collection of safety data to ensure compliance to the PIP's key binding elements, risk management plan (RMP) and post marketing commitment (PMC) requirements: growth and development, including fertility and sexual development, health-related quality of life, neuropsychological function and bone toxicities. Updated sections "end of study" and "duration of study" to: Extend the follow-up duration from 3 to 5 years in order to collect long-term safety data and OS as per the agreed PIP. Clarified treatment options following independent data monitoring committee (IDMC) recommendations based on the futility analysis. The statistical section was also updated accordingly. Removed the minimum requirement of 10 patients to be enrolled in the Young Patient Cohort to align with PDCO in its positive opinion on a modification of a PIP. A positive PDCO Opinion was received in December 2013 and the EMA decision was issued on 22 January 2014 (P/0005/2014). Updated the duration of study of the Young Patient Cohort to align with the main study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
