

Clinical trial results:

A PHASE 2, RANDOMIZED, PLACEBO-CONTROLLED, SINGLE-BLIND TRIAL TO ASSESS THE SAFETY, TOLERABILITY, AND IMMUNOGENICITY OF REPEVAX AND BIVALENT rLP2086 VACCINE WHEN ADMINISTERED CONCOMITANTLY IN HEALTHY SUBJECTS AGED 11 TO <19 YEARS

Summary

EudraCT number	2010-022449-38
Trial protocol	DE FI

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001037-PIP02-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 December 2013
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	19 February 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that the immune response induced by Repevax given with the bivalent rLP2086 vaccine (group 1) is non-inferior to the immune response induced by Repevax alone (group 2) when measured 1 month after vaccination 1. The immune responses to all components of Repevax will be assessed.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 March 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Finland: 377
Country: Number of subjects enrolled	Germany: 155
Country: Number of subjects enrolled	Poland: 220
Worldwide total number of subjects	752
EEA total number of subjects	752

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	147
Adolescents (12-17 years)	482

Adults (18-64 years)	123
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 753 subjects were enrolled in this study. Of these, 4 subjects were not randomized but were vaccinated rLP2086 vaccine or Repevax or Saline at Vaccination 1. These subjects were included in safety population and not intent-to-treat population.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Group 1: rLP2086 + Repevax

Arm description:

Randomized to receive rLP2086 at 0-, 2-, 6-month and Repevax at 0-month.

Arm type	Experimental
Investigational medicinal product name	Bivalent rLP2086
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

rLP2086 was administered at 0-, 2-, 6-month.

Investigational medicinal product name	Repevax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Repevax was administered at 0 month.

Arm title	Group 2: Saline+Repevax
------------------	-------------------------

Arm description:

Randomized to receive saline at 0-, 2-, 6-month and Repevax at 0-month.

Arm type	Control
Investigational medicinal product name	Saline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Saline was administered at 0-, 2-, 6- month.

Investigational medicinal product name	Repevax
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Repevax was administered at 0-month.

Number of subjects in period 1^[1]	Group 1: rLP2086 + Repevax	Group 2: Saline+Repevax
Started	373	376
Completed	330	347
Not completed	43	29
Consent withdrawn by subject	19	10
Physician decision	-	2
Not eligible	1	1
Death	1	-
Randomized but not vaccinated	1	-
Adverse event	8	-
Lost to follow-up	4	6
unspecified	-	3
Protocol deviation	9	7

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 4 Subjects were not randomized but were vaccinated rLP2086 vaccine or repevax or saline at Vaccination 1. These subjects were included in safety population and not intent-to-treat population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AE: Vaccination 1 to 1 month after last administration of investigational product (bivalent rLP2086/saline/Repevax). Serious adverse event (SAE) reported from Vaccination 1 to 6 months after last of investigational product (bivalent rLP2086/saline/Repevax)

Adverse event reporting additional description:

Events collected on case report form were reported. Summary was performed for subjects as per vaccine administration.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 July 2011	1) Subject participation in the study was increased from 14 to 17 months. 2) Duration of the study was increased from 17 to 20 months.
18 April 2012	1) Any non-serious AE that was determined by the sponsor to be serious was reported as an SAE. To assist in the determination of case seriousness further information was being requested from the investigator to provide clarity and understanding of the event in the context of the trial. 2) Active reporting period and necessity to report all SAEs post-active reporting period was specified as follows-A subject's AE (serious and non serious) was reported and recorded from the signing of the Informed consent form (ICF) to visit 6 (postvaccination 3 blood draw) and at month 12 (Final Telephone Contact), the parent/legal guardian or subject was to be contacted by telephone to inquire about SAEs including hospitalizations, and newly diagnosed major illnesses or conditions since visit 6. 3) Exposure during pregnancy was updated as- A female becomes, or is found to be, pregnant either while receiving or being exposed (eg, due to treatment or environmental exposure) or after discontinuing or having been directly exposed to the investigational product. 4)In the case of a live birth, the structural integrity of the neonate was assessed by gross visual inspection (unless pre-procedure test findings were conclusive for a congenital anomaly and the findings are reported).In case of termination, the reason(s) for the termination was to be specified. 5) Clarification added regarding persistent or significant disability/ incapacity (SAE) as substantial disruption of the ability to conduct normal life functions. 6) Definition of AE updated to include drug abuse and drug dependency factor along with signs and symptoms resulting from exposure via breastfeeding and medication error. 7) Definition for Medication errors was updated to provide clarity.
13 December 2012	1) Safety endpoint was updated to in consistent to Phase 3 program with definite window (time-frame) of assessment of proportion of subjects reporting local reactions, systemic reactions , SAE and AE.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
01 July 2011	Study injections for this study were temporarily paused on during investigation of a suspected, unexpected, serious adverse reaction (SUSAR) identified after hospitalization of the subject. The subject experienced severe chills, headache and vertigo approximately 70 minutes after receiving the second dose of rLP2086 vaccine in study B1971012.	01 November 2011
