Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 September 2013
Global end of trial reached?	Yes
Global end of trial date	14 September 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to demonstrate that dacomitinib treatment was superior to erlotinib treatment with respect to Progression Free Survival (PFS) in either of the co-primary populations (all participants with advanced NSCLC and the participants with KRAS-WT tumors with advanced NSCLC). The secondary objectives were to compare overall survival (OS), objective response rate (ORR), and duration of response (DR) between arms in the co-primary populations as well as patient reported outcomes (PROs), pharmacokinetics (PK) and safety and tolerability in each arm.

Protection of trial subjects:

The investigator ensured that each study participant, or his/her legally acceptable representative, was fully informed about the nature and objectives of the study and possible risks associated with participation. The investigator, or a person designated by the investigator, obtained written informed consent from each participant or the participant's legally acceptable representative before any study-specific activity was performed. The investigator retained the original of each participant's signed consent form.

All parties ensured protection of participant personal data and did not include participant names on any sponsor forms, reports, publications, or in any other disclosures, except where required by laws.

Background therapy: -

Evidence for comparator:

Erlotinib is an orally administered EGFR Tyrosine Kinase Inhibitor that has been licensed as a single agent therapy for use in NSCLC after failure of at least one chemotherapy regimen. Regulatory approval was supported by a Phase 3 trial (BR.21) in 731 participants previously treated for advanced non-small cell lung cancer randomized to best supportive care versus best supportive care plus erlotinib 150 mg daily. Participants treated with erlotinib had superior response rate (8.9 percent versus <1 percent), PFS (10 versus 8 weeks) and OS (6.7 versus 4.7 months) compared to supportive care alone.

Actual start date of recruitment	16 June 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 1

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	490
From 65 to 84 years	385
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 134 sites with 878 participants randomized in a 1:1 ratio to 1 of 2 treatment arms, of these 872 were treated. Eligible participants who provided written informed consent and met all inclusion and exclusion criteria were assigned a Single Subject Identification number and randomized by the central randomization system.

Pre-assignment

Screening details:

There were no significant study milestones following participant enrollment, but prior to group assignment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A (blinded dacomitinib and blinded erlotinib placebo)

Arm description:

Participants randomized to Arm A received dacomitinib 45 mg orally once daily and erlotinib 150 mg placebo orally once daily. Participants began treatment within 3 days after randomization and continued treatment without breaks until they experienced unacceptable toxicity, tumor progression, or death.

Arm type	Experimental
Investigational medicinal product name	Dacomitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

45 mg orally once daily

Arm title	Arm B (blinded erlotinib and blinded dacomitinib placebo)
------------------	-----------------------------------------------------------

Arm description:

Participants randomized to Arm B received erlotinib 150 mg orally once daily and dacomitinib 45 mg placebo orally once daily. Participants began treatment within 3 days after randomization and continued treatment without breaks until they experienced unacceptable toxicity, tumor progression, or death.

Arm type	Active comparator
Investigational medicinal product name	Erlotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

150 mg orally once daily

Number of subjects in period 1	Arm A (blinded dacomitinib and blinded erlotinib placebo)	Arm B (blinded erlotinib and blinded dacomitinib placebo)
Started	439	439
Completed	0	0
Not completed	439	439
Adverse event, serious fatal	359	371

Statistical analyses

Statistical analysis title	Mixed Model Analysis for Global QoL
Statistical analysis description:	
Analysis presented for QLQ-C30 Global QoL. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	-1.9357
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.278
upper limit	0.407

Statistical analysis title	Mixed Model Analysis for Cognitive Functioning
Statistical analysis description:	
Analysis presented for QLQ-C30 cognitive functioning. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	0.8067
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.312
upper limit	2.926

Statistical analysis title	Mixed Model Analysis for Emotional Functioning
Statistical analysis description:	
Analysis presented for QLQ-C30 emotional functioning. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	0.73
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.575
upper limit	3.035

Statistical analysis title	Mixed Model Analysis for Physical Functioning
Statistical analysis description:	
Analysis presented for QLQ-C30 physical functioning. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	1.5289
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.756
upper limit	3.814

Statistical analysis title	Mixed Model Analysis for Role Functioning
Statistical analysis description:	
Analysis presented for QLQ-C30 role functioning. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	

Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	1.2219
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.975
upper limit	4.419

Statistical analysis title	Mixed Model Analysis for Social Functioning
Statistical analysis description:	
Analysis presented for QLQ-C30 social functioning. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	-1.497
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.575
upper limit	1.581

Secondary: Mean and difference in mean in QLQ-C30 Symptoms as Assessed by the EORTC-QLQ-C30.

End point title	Mean and difference in mean in QLQ-C30 Symptoms as Assessed by the EORTC-QLQ-C30.
End point description:	
EORTC QLQ-C30: included functional scales (physical, role, cognitive, emotional, and social), global health status, symptom scales (fatigue, pain, nausea/vomiting) and single items (dyspnoea, appetite loss, insomnia, constipation/diarrhea and financial difficulties). Most questions used 4 point scale (1 'Not at all' to 4 'Very much'; 2 questions used 7-point scale (1 'very poor' to 7 'Excellent'). Scores averaged, transformed to 0-100 scale; higher score=better level of functioning or greater degree of symptoms.	
End point type	Secondary
End point timeframe:	
Cycle 1 day 1 to the end of treatment or withdrawal.	

End point values	Arm A (blinded dacomitinib and blinded erlotinib placebo)	Arm B (blinded erlotinib and blinded dacomitinib placebo)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	421	424		
Units: Units on a scale.				
arithmetic mean (confidence interval 95%)				
QLQ-C30 Appetite loss	28.596 (25.841 to 31.351)	27.3109 (24.532 to 30.09)

Statistical analysis title	Mixed Model Analysis for Any Med for Pain
-----------------------------------	-------------------------------------------

Statistical analysis description:

Analysis presented for Any Med for Pain as Assessed by the EORTC-QLQ-LC13. Estimated change from baseline was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-LC13 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.

Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845
Analysis specification	Pre-specified
Analysis type	other
Method	Repeated measures mixed-effects model.
Parameter estimate	Mean difference
Point estimate	0.0322
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.847
upper limit	4.911

Secondary: Mean and difference in mean of the EuroQoL-5 Dimensions (EQ-5D) Visual Analogue Scale (VAS) Score

End point title	Mean and difference in mean of the EuroQoL-5 Dimensions (EQ-5D) Visual Analogue Scale (VAS) Score
-----------------	---------------------------------------------------------------------------------------------------

End point description:

The EQ-5D is a validated and reliable self-report preference-based measure developed by the EuroQoL Group to assess health-related quality of life. It consists of the EQ-5D descriptive system and a visual analogue scale-the EQ VAS. The EQ-5D descriptive system measures a participants' health state on 5 dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Each dimension has 3 levels, reflecting "no health problems," "moderate health problems," and "extreme health problems." The EQ VAS records the respondent's self-rated health on a scale from 0 (worst imaginable health state) to 100 (best imaginable health state).

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 day 1 to the end of treatment or withdrawal.

End point values	Arm A (blinded dacomitinib and blinded erlotinib placebo)	Arm B (blinded erlotinib and blinded dacomitinib placebo)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	421	424		
Units: Units on a scale.				
arithmetic mean (confidence interval 95%)	65.1908 (63.519 to 66.863)	65.5794 (63.908 to 67.25)		

Statistical analyses

Statistical analysis title	Mixed Model Analysis for EQ-5D VAS
Statistical analysis description:	
Analysis presented for EQ-5D VAS. Mean difference was from a repeated measures mixed-effects model with an intercept term, treatment, treatment-by-time interaction, and baseline EORTC QLQ-C30 subscale baseline score (intercept and time from first dose are included as random effects). Confidence intervals provided were not adjusted for multiplicity.	
Comparison groups	Arm A (blinded dacomitinib and blinded erlotinib placebo) v Arm B (blinded erlotinib and blinded dacomitinib placebo)
Number of subjects included in analysis	845

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AE reporting period is from 1st dose of study drug through 28 days after last dose of study drug.

SAE reporting period is from informed consent through 28 days after last dose of study drug.

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as nonserious in another subject, or one subject may have experienced both a serious and nonserious event during the study.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Arm B (blinded erlotinib and blinded dacomitinib placebo)
-----------------------	-----------------------------------------------------------

Reporting group description:

Participants randomized to Arm B received erlotinib 150 mg orally once daily and dacomitinib 45 mg placebo orally once daily. Participants began treatment within 3 days after randomization and continued treatment without breaks until they experienced unacceptable toxicity, tumor progression, or death.

Reporting group title	Arm A (blinded dacomitinib and blinded erlotinib placebo)
-----------------------	-----------------------------------------------------------

Reporting group description:

Participants randomized to Arm A received dacomitinib 45 mg orally once daily and erlotinib 150 mg placebo orally once daily. Participants began treatment within 3 days after randomization and continued treatment without breaks until they experienced unacceptable toxicity, tumor progression, or death.

Serious adverse events	Arm B (blinded erlotinib and blinded dacomitinib placebo)	Arm A (blinded dacomitinib and blinded erlotinib placebo)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 February 2012	This amendment clarified wording/guidance for pulmonary toxicity and on-study LVEF evaluation. Also updated information and guidance on drugs dependent on CYP2D6 for metabolism, established the IOBU-SDMC with the scope to enhance safety data monitoring.
22 April 2013	Amended references to the summary of product characteristics as the single reference safety document for the comparator erlotinib, updated dacomitinib concomitant medication guide and included guidance on the use of acid-reducing agents.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None.

Notes:
