General information about the trial

Main objective of the trial:

To determine whether administration of rolapitant with granisetron and dexamethasone improves CINV in the delayed phase (>24 to 120 hours) of CINV compared with administration of placebo with granisetron and dexamethasone in subjects receiving HEC. The primary outcome will be based on complete response (defined as no emetic episodes and no rescue medication) in the delayed phase (>24 to 120 hours).

Subject disposition

Recruitment

Recruitment details:

This is a Phase 3, multicenter, randomized, parallel-group, double-blind, active-controlled study of rolapitant in subjects receiving HEC. All participants expected to complete Cycle 1 and will have the option of participating in up to five additional cycles.

Pre-assignment

Screening details:

Overall Number of Baseline Participants only included the Modified Intent to Treat (MITT) population: 266 subjects were randomized to Rolapitant and 266 were randomized to control; 264 of those randomized to Rolapitant received study drug in Cycle 1; 262 of those who were randomized to control received study drug in Cycle 1.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Rolapitant + Granisetron + Dexamethasone

Arm description:

* Oral dose of rolapitant 180 mg (equivalent to 200 mg rolapitant hydrochloride monohydrate) 1–2 h before administration of chemotherapy

* Granisetron (10 µg/kg intravenously) about 30 min before chemotherapy

* Dexamethasone (20 mg orally) about 30 min before chemotherapy, and dexamethasone 8 mg orally twice daily on days 2–4

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 6 cycles of treatment. Median number cycles=2; each cycle median duration = 21-22days. AEs that occur up to 30 days past last dose of treatment are included. Number of deaths (all causes) include those occurring > 30 days after last dose treatment.

Adverse event reporting additional description:

Safety analysis was based on actual treatment received in Cycle 1. 266 subjects were randomized to Rolapitant, among which 263 received Rolapitant in Cycle 1, hence Safety=263 for Rolapitant. 266 subjects were randomized to control, among which 263 received control in Cycle 1 (There was an error in treatment received), hence Safety=263 for control.
