

## Clinical trial results:

### A Multicentre, Open-Label, Long-Term, Safety and Tolerability Study of Retigabine Immediate Release (IR) in Adults with Partial-Onset Seizures (Extension of Study RGB113905)

#### Summary

EudraCT number	2010-022777-34
Trial protocol	DE NL IT ES BG BE PL
Global end of trial date	13 September 2017

#### Results information

Result version number	v3 (current)
This version publication date	21 June 2018
First version publication date	22 December 2017
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	113413
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 April 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 December 2016
Global end of trial reached?	Yes
Global end of trial date	13 September 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess long-term safety and tolerability of flexibly dosed retigabine immediate release (IR) as adjunctive therapy in adults with partial-onset seizures (POS) who completed open-label flexible dose Study RGB113905.

Protection of trial subjects:

NA

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 February 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Bulgaria: 5
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Italy: 19
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Russian Federation: 42
Country: Number of subjects enrolled	Thailand: 8
Country: Number of subjects enrolled	Ukraine: 16
Worldwide total number of subjects	98
EEA total number of subjects	32

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	94
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants with partial-onset seizures (POS) who successfully completed the 20 weeks of treatment in parent study NCT01336621 were recruited in this open-label extension (OLE) study. The study was conducted in two periods, a primary treatment phase and a safety follow-up continuation phase (SFUCP).

### Pre-assignment

Screening details:

Screening was performed on the same day as the final visit of the parent study NCT01336621. A total of 98 participants completed the parent study and opted to enter into this study. All participants received at least one dose of retigabine immediate release (IR) tablets.

### Period 1

Period 1 title	Primary Reporting Phase (Upto 5.8 years)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Retigabine IR
-----------	---------------

Arm description:

Eligible participants continued on the same maintenance dose of retigabine IR and the concurrent anti-epileptic drugs (AEDs) as they were taking at Visit 7 (Week 20) in the parent study NCT01336621. After the first week of the study, the dose of retigabine IR could be increased or decreased by 50-150 milligrams per day (mg/day) on a weekly basis. The overall daily dose of retigabine IR was to be maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

Arm type	Experimental
Investigational medicinal product name	Retigabine immediate release (IR)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Five strengths of retigabine IR including 50 mg, 100 mg, 200 mg, 300 mg and 400 mg tablets were provided. Participants entering RTG113413 from the parent study continued on the same maintenance dose of retigabine IR as per parent study. The dose was increased in steps of 50 mg to 150 mg/day on a weekly basis. The overall daily dose of retigabine IR was maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

Number of subjects in period 1	Retigabine IR
Started	98
Completed	0
Not completed	98
Continued into SFUCP	9
Consent withdrawn by subject	27
Physician decision	2
Other: Reached stopping criteria	22

Adverse event, non-fatal	11
Other: study terminated	11
Other: lost to follow up	2
Lack of efficacy	2
Protocol deviation	12

## Period 2

Period 2 title	SFUCP (Upto 2.6 years)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

<b>Arm title</b>	Retigabine IR
------------------	---------------

### Arm description:

Eligible participants continued on the same maintenance dose of retigabine IR and the concurrent anti-epileptic drugs (AEDs) as they were taking at Visit 7 (Week 20) in the parent study NCT01336621. After the first week of the study, the dose of retigabine IR could be increased or decreased by 50-150 milligrams per day (mg/day) on a weekly basis. The overall daily dose of retigabine IR was to be maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

Arm type	Experimental
Investigational medicinal product name	Retigabine immediate release (IR)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

### Dosage and administration details:

Participants entering RTG113413 from the parent study continued on the same maintenance dose of retigabine IR as per parent study. The dose was increased in steps of 50 mg to 150 mg/day on a weekly basis. The overall daily dose of retigabine IR was maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

Number of subjects in period 2	Retigabine IR
Started	9
Completed	0
Not completed	9
Study closed/terminated	3
Consent withdrawn by subject	3
Physician decision	1
Reached stopping criteria	1
Adverse event, non-fatal	1

## Baseline characteristics

### Reporting groups

Reporting group title	Retigabine IR
-----------------------	---------------

Reporting group description:

Eligible participants continued on the same maintenance dose of retigabine IR and the concurrent anti-epileptic drugs (AEDs) as they were taking at Visit 7 (Week 20) in the parent study NCT01336621. After the first week of the study, the dose of retigabine IR could be increased or decreased by 50-150 milligrams per day (mg/day) on a weekly basis. The overall daily dose of retigabine IR was to be maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

Reporting group values	Retigabine IR	Total	
Number of subjects	98	98	
Age categorical Units: Subjects			
Age continuous Units: years arithmetic mean standard deviation	39.2 ± 13.19	-	
Gender categorical Units: Subjects			
Female	48	48	
Male	50	50	
Race/Ethnicity, Customized Units: Subjects			
Asian: South East Asian Heritage	8	8	
White- White/Caucasian/ European Heritage	90	90	

## End points

### End points reporting groups

Reporting group title	Retigabine IR
-----------------------	---------------

Reporting group description:

### Primary: Number of participants with treatment emergent adverse events (TEAEs) and serious AEs (TESAEs)

End point title	Number of participants with treatment emergent adverse events (TEAEs) and serious AEs (TESAEs) <sup>[1]</sup>
-----------------	---

End point description:

An AE is any untoward medical occurrence in a clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAE is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability, is a congenital anomaly/ birth defect or is associated with liver injury or impaired liver function. TEAE refers to an AE for which the onset was on or after the date of the first retigabine dose in this study and on or before 30 days after the last retigabine dose date. AEs that started in the parent study that increased in severity during this study were also considered treatment-emergent. The analysis was performed on Safety Population, which included participants who took at least one dose of study medication after they had enrolled into this OLE study.

End point type	Primary
----------------	---------

End point timeframe:

Up to 5.8 years

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Retigabine IR			
Subject group type	Reporting group			
Number of subjects analysed	98 <sup>[2]</sup>			
Units: Participants				
Any TEAE	38			
Any TESAE	4

### Statistical analyses

No statistical analyses for this end point

### Primary: Number of participants with AEs and SAEs: All SFUCP subjects

End point title	Number of participants with AEs and SAEs: All SFUCP
-----------------	---

End point description:

An AE is any untoward medical occurrence in a clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAE is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability, is a congenital anomaly/ birth defect or is associated with liver injury or impaired liver function. The following AEs were collected in the SFUCP: AEs related to the finding(s) of pigmentation/, discoloration of the eye /skin, AEs related to unexplained vision loss, SAEs, Deaths and Pregnancies. SFUCP collected AEs are those for which onset was 31 days or more after the last dose of retigabine. The analysis was performed on the All SFUCP Subjects population which comprised of all subjects who enter the SFUCP.

End point type	Primary

**Primary: Number of participants with potential clinical concern (PCC) values of change from Baseline in vital signs and weight**

---

End point title	Number of participants with potential clinical concern (PCC) values of change from Baseline in vital signs and weight <sup>[17]</sup>
-----------------	---

End point description:

Vital signs including systolic blood pressure (SBP), diastolic blood pressure (DBP) and heart rate (HR) were measured after at least 5 minutes of rest. Body weight was measured without shoes and wearing light clothing. Baseline assessments in this OLE study were defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was calculated by subtracting the Baseline value from the post-baseline value. Increase or decrease of  $\geq 20$  in SBP, increase or decrease of  $\geq 15$  in DBP and HR were considered as PCC values. Number of participants with PCC values of vital signs for any visit post-Baseline are presented.

End point type	Primary

## Statistical analyses

No statistical analyses for this end point

## Primary: Number of participants with clinical chemistry parameters of PCC

End point title	Number of participants with clinical chemistry parameters of PCC <sup>[23]</sup>
-----------------	--

End point description:

Number of participants with chemistry parameters of PCC at 'any visit post-Baseline' are presented. Chemistry parameters for which PCC values were identified were alanine aminotransferase (ALT) (if value  $\geq 3 \times$  upper limit of normal [ULN]), alkaline phosphatase (alk.phosphatase) (if value  $\geq 3 \times$ ULN), aspartate aminotransferase (AST) (if value  $\geq 3 \times$ ULN), calcium (if value  $\leq 1.8962$  or  $\geq 2.8692$ ), carbon-di-oxide (CO<sub>2</sub>) (if value  $\leq 18$  or  $\geq 36$ ), chloride (if value  $\leq 92$  or  $\geq 112$ ), creatine kinase (if value  $\geq 3 \times$ ULN), direct bilirubin (if value  $\geq 1.5 \times$ ULN), glucose (if value  $\leq 2.7755$  or  $\geq 11.102$ ), lactate dehydrogenase (LD) (if value  $\geq 3 \times$ ULN), magnesium (if value  $< 0.36$  or  $> 2.50$ ), potassium (if value  $\leq 3.0$  or  $\geq 6.0$ ), sodium (if value  $\leq 127$  or  $\geq 153$ ), total bilirubin (if value  $\geq 1.5 \times$ ULN), total protein (if value  $< 45$  or  $> 100$ ), blood urea nitrogen (BUN) (if value  $\geq 14.28$ ). Only those participants with data available at specific time points were analyzed (represented by n=X in the category titles).

## Statistical analyses

No statistical analyses for this end point

### Primary: Change from Baseline in direct bilirubin, total bilirubin and creatinine

End point title	Change from Baseline in direct bilirubin, total bilirubin and creatinine <sup>[33]</sup>
-----------------	--

End point description:

Blood samples were collected from participants for evaluation of change from Baseline in clinical chemistry parameters including direct bilirubin, total bilirubin and creatinine. Baseline was defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was defined as post-Baseline value minus Baseline value. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

End point type	Primary
----------------	---------

End point timeframe:

Baseline and up to 5.8 years

Notes:

[33] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

Notes:

[38] - Safety Population

## Statistical analyses

No statistical analyses for this end point

## Primary: Change from Baseline in absolute basophils, absolute eosinophils, absolute lymphocytes, absolute monocytes, absolute total neutrophils, platelet count and WBC count

End point title	Change from Baseline in absolute basophils, absolute eosinophils, absolute lymphocytes, absolute monocytes, absolute total neutrophils, platelet count and WBC count <sup>[39]</sup>
-----------------	--

# End point description:

Blood samples were collected from participants for evaluation of change from Baseline in clinical hematology parameters including absolute basophils, eosinophils, lymphocytes, monocytes, neutrophils, platelet count and WBC count. Baseline was defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was defined as post-Baseline value minus Baseline value. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

End point type	Primary
----------------	---------

End point timeframe:

Baseline and up to 5.8 years

# Notes:

[39] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

## Statistical analyses

No statistical analyses for this end point

## Primary: Change from Baseline in hemoglobin and mean corpuscle hemoglobin concentration (MCHC) levels

End point title	Change from Baseline in hemoglobin and mean corpuscle hemoglobin concentration (MCHC) levels <sup>[41]</sup>
-----------------	--

End point description:

Blood samples were collected from participants for evaluation of change from Baseline in clinical hematology parameters including hemoglobin and MCHC. Baseline was defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was defined as post-Baseline value minus Baseline value. Only those participants with data available at the specified

data points were analyzed (represented by n= X in the category titles).

End point type	Primary
End point timeframe:	
Baseline and up to 5.8 years	

Notes:

[41] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

## Statistical analyses

No statistical analyses for this end point

## Primary: Change from Baseline in urine albumin creatinine ratio

End point title	Change from Baseline in urine albumin creatinine ratio <sup>[53]</sup>
-----------------	--

End point description:

Urine samples were collected from participants for evaluation of change from Baseline in urinalysis parameters including albumin creatinine ratio. Baseline was defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was defined as post-Baseline value minus Baseline value. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

End point type	Primary
----------------	---------

End point timeframe:

Baseline and up to 5.8 years

Notes:

[53] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Retigabine IR

## Primary: Changes from Baseline in American Urological Association Symptom Scale

## (AUA SS) score

End point title	Changes from Baseline in American Urological Association Symptom Scale (AUA SS) score <sup>[59]</sup>
-----------------	---

### End point description:

The effect of retigabine on bladder function was assessed using AUA symptom index. It is a 7-item Likert-scored scale ranging from 0 (no symptom at all) to 5 (almost always symptoms present) with a total possible score of 35. AUA SS score is the sum of the responses to these seven questions. The total score for all questions was classified as mild (0 to 7), moderate (8 to 19), or severe (>19). Baseline was defined by and taken directly from the Baseline assessments in the parent study NCT01336621. Change from Baseline was defined as post-Baseline value minus Baseline value. Only those participants with data available at the specified data points were analyzed (represented by n= X in the category titles).

End point type	Primary

Non-retinal ocular pigmentary abnormality	1			

Notes:

[72] - All SFUCP Subjects

### Statistical analyses

No statistical analyses for this end point

### Primary: Number of Participants With Resolution of Dermatologist Confirmed Abnormal Discoloration After Discontinuation of Retigabine

End point title	Number of Participants With Resolution of Dermatologist Confirmed Abnormal Discoloration After Discontinuation of Retigabine <sup>[73]</sup>
-----------------	--

End point description:

Participants who enter the SFUCP who had an on-treatment finding(s) of abnormal discoloration of skin, lips, nails or mucosa confirmed by a dermatologist entered the SFUCP and underwent assessments performed by a dermatologist at 6-monthly intervals. The assessment of the participant's skin included assessment of the skin around the eyes and the eyelids, lips, nails, and mucosa.

End point type	Primary
----------------	---------

End point timeframe:

Up to 2.6 years

Notes:

[73] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Retigabine IR			
Subject group type	Reporting group			
Number of subjects analysed	9 <sup>[74]</sup>			
Units: Participants				
number (not applicable)	2			

Notes:

### Statistical analyses

No statistical analyses for this end point

### Primary: Time From Discontinuation of Retigabine to Resolution of Abnormal Eye Pigmentation

End point title	Time From Discontinuation of Retigabine to Resolution of
-----------------	--

## End point description:

Retinal pigmentary abnormality was determined by either an ophthalmologist or retina specialist. Retinal pigmentary abnormality included abnormality of macula, peripheral retina and unspecified location. If a participant had pigmentary abnormality of macula and pigmentary abnormality of the peripheral retina both should be resolved in order for retinal pigmentary abnormality to be considered resolved. If a participant had non-retinal ocular pigmentary abnormality in more than one location (conjunctiva, sclera, cornea, iris or lens), all should be resolved for non-retinal pigmentary abnormality to be considered resolved.

End point type	Primary
----------------	---------

## End point timeframe:

Up to 2.6 years

## Notes:

[75] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

## Statistical analyses

No statistical analyses for this end point

### Primary: Time From Discontinuation of Retigabine to Resolution of All Dermatologist-Confirmed Abnormal Discoloration

End point title	Time From Discontinuation of Retigabine to Resolution of All Dermatologist-Confirmed Abnormal Discoloration <sup>[77]</sup>
-----------------	---

## End point description:

Assessments were at approximately 6-monthly intervals (timed relative to the participants previous dermatology assessment) until the abnormal discoloration either resolved or stabilized (as defined by no changes over 2 consecutive 6-monthly assessments performed by the dermatologist over at least 12 months after discontinuation of retigabine). The assessment of the participant's skin included assessment of the skin around the eyes and the eyelids, lips, nails, and mucosa. Only participants with resolution of the specified tissue are included in this analysis. 99999 indicates data was not available due to low number of participants.

End point type	Primary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

On-treatment serious adverse events (SAEs) and non-serious adverse events (AEs) were collected from the start of the study treatment until the end of study treatment (up to 5.8 years).

Adverse event reporting additional description:

AEs and SAEs were collected in 'Safety Population' for retigabine IR arm and in 'All SFUCP subjects Population' for Retigabine IR in SFUCP arm. The MedDRA version for the Primary Reporting Phase is 19.1. However the SFUCP phase uses version 20.1.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	20.1
--------------------	------

### Reporting groups

Reporting group title	Retigabine IR in SFUCP
-----------------------	------------------------

Reporting group description:

Participants who withdrew from the Open-Label Treatment Phase and who had retinal pigmentation or unexplained vision loss, pigmentation of non-retinal ocular tissue or abnormal discoloration of nails, lips, skin or mucosa were followed-up in SFUCP following discontinuation of their retigabine, which was the final reporting phase of the study. During SFUCP, participants underwent six monthly comprehensive eye examinations and/or dermatological assessments. Participants were followed-up until the discoloration /pigmentation either resolves or stabilizes, as defined by no change over two consecutive six monthly assessments over at least 12 months after discontinuation of RTG IR .

Reporting group title	Retigabine IR
-----------------------	---------------

Reporting group description:

Eligible participants continued on the same maintenance dose of retigabine IR and the concurrent anti-epileptic drugs (AEDs) as they were taking at Visit 7 (Week 20) in the parent study NCT01336621. After the first week of the study, the dose of retigabine IR could be increased or decreased by 50-150 milligrams per day (mg/day) on a weekly basis. The overall daily dose of retigabine IR was to be maintained between 300 mg/day (minimum) and 1200 mg/day (maximum).

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 October 2013	To update the Sponsor Information page including change in Medical Monitor; to add the requirement to re-evaluate all ongoing participants at each clinic visit with respect to the risk versus the benefit of continuing treatment with Retigabine; revision of study conclusion conditions under which participants will continue to receive retigabine treatment; to re-consent all ongoing participants with revised patient information materials detailing the risk of retinal pigmentation, possible vision loss, pigmentation of non retinal ocular tissue, and discolouration of skin, lips, nails or Mucosa; Addition of 6-monthly comprehensive eye assessments by an ophthalmologist/retina specialist to assess for retinal pigmentation and/or unexplained vision loss; Addition of a skin examination by the investigator at scheduled clinic visits; Addition of referral to a dermatologist for abnormal skin discolouration noted by the investigator or reported by the participant, and repeat 6-monthly assessments by the dermatologist for follow-up of confirmed abnormal skin discolouration; Addition of a Safety Follow-Up / Continuation Phase to provide follow-up of participants who are found to have retinal pigmentation, unexplained vision loss, pigmentation of non-retinal ocular tissue or abnormal discolouration of skin, lips, nails or mucosa and who have stopped taking retigabine; Addition of safety endpoints related to abnormal pigmentation of the eye and/or discolouration of the skin, lips, nails or mucosa; Addition of Pharmacogenetics (PGx) sample collection.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

17 parts. withdrew due to AE, however only 16 had a TEAE leading to withdrawal of RTG. 1 part. with a TEAE of seizure, withdrew due to lack of efficacy. 2 further parts. withdrew due to AE but had no TEAEs which led to withdrawal of RTG.

Notes:
