

Clinical trial results:

Dexamethasone Reduces Emesis After Major gastrointestinal Surgery (DREAMS trial) - A prospective, double-blind, multicentre, randomised control trial

Summary

EudraCT number	2010-022894-32
Trial protocol	GB
Global end of trial date	16 February 2015

Results information

Result version number	v1 (current)
This version publication date	11 November 2019
First version publication date	11 November 2019
Summary attachment (see zip file)	Dreams trial final report_signature page (DREAMS_End of trial report_signature page_Feb 2016.pdf) DREAMS End Of Trial Report_Feb 2016 (DREAMS End of Trial Report_19 Feb 2016.pdf)

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 November 2014
Global end of trial reached?	Yes
Global end of trial date	16 February 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The DREAMS trial is a 2 stage study: i) a feasibility study and ii) a phase IV randomised controlled trial. The objective of the feasibility study is to assess the feasibility of running the phase IV study. This pilot trial will develop effective strategies for patient identification, recruitment and follow-up in the main part of the trial. The objective of the full trial is to determine whether dexamethasone reduces postoperative nausea and vomiting in patients undergoing planned major bowel surgery and to determine its role in future use in this category of patients.

Protection of trial subjects:

Dexamethasone is a safe and widely used drug for the purpose of reducing PONV. It is widely, but not universally used, for patients undergoing abdominal surgery. As the use of the drug in reducing PONV had not previously been studied specifically in patients undergoing bowel surgery, the DREAMS trial aimed to assess that.

Patients allocated to receive dexamethasone were administered a single IV dose of pre-operative dexamethasone.

The adverse effects of dexamethasone are well characterised and include gastrointestinal disturbances, hyperglycaemia, wound infection, wound dehiscence and anastomotic leak. All adverse effects were monitored and reported. Patients at increased risk of dexamethasone related adverse effects were excluded from this study.

Background therapy:

One other anti-emetic which all patients were meant to have - LM to add

Evidence for comparator: -

Actual start date of recruitment	17 July 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 1350
Worldwide total number of subjects	1350
EEA total number of subjects	1350

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	631
From 65 to 84 years	690
85 years and over	29

Subject disposition

Recruitment

Recruitment details:

The first patient was recruited and randomised on 17-Jul-2011 and the last patient was randomised into the trial on 31-Jan-2014. 1350 patients were recruited from 48 centres in the UK. Of these patients, 674 were entered into the Dexamethasone arm (the intervention arm) and 676 patients in the no dexamethasone arm (control arm).

Pre-assignment

Screening details:

Of the 2894 patients assessed for eligibility, 1544 patients were excluded prior to randomisation, therefore 1350 patients were randomised into the study.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

The randomised treatment allocation was given to the anaesthetist (or a member of their team). This randomisation allocation was not entered on the anaesthetic chart, operation record or patient notes. Dexamethasone was not prescribed nor its administration recorded on the anaesthetic or drug chart, instead, stickers were provided in the DREAMS site file which were added to the patient notes to explain that the patient is in a blinded trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	Dexamethasone

Arm description:

Patients who underwent laparoscopic or open gastrointestinal resections for malignant or benign pathology were randomised, in a 1:1 ratio, between 8mg IV dexamethasone and control. All patients were to be given one additional anti-emetic at the time of induction, however, this must have not been dexamethasone. Thus, the intervention treatment arm was: 8 mg IV dexamethasone (plus one other anti-emetic of the anaesthetist's choice) following induction of anaesthesia but prior to commencement of surgery.

Arm type	Experimental
Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

The active compound of dexamethasone is Dexamethasone Sodium Phosphate. Dexamethasone administered within the trial is from standard NHS hospital stock.

There are two dexamethasone preparations available for parenteral use in the UK. In line with MHRA-guidance, changes to the labelling were made in 2010 so that both preparations are labelled to reflect the amount of dexamethasone base per volume; the two products remain different concentrations.

It is now recommended that parenteral dexamethasone is prescribed as dexamethasone base, for trial purposes 8mg dexamethasone base should be given. As dexamethasone comes in two forms of 4mg/ml and 3.3mg/ml, the anaesthetist/research investigator administering the drug will draw up the accurate volume to make up 8mg (2ml from the 4mg/ml vial and 2.4ml from the 3.3mg/ml vial).

Arm title	no Dexamethasone
------------------	------------------

Arm description:

Patients who underwent laparoscopic or open gastrointestinal resections for malignant or benign pathology were randomised, in a 1:1 ratio, between 8mg IV dexamethasone and control. All patients

were to be given one additional anti-emetic at the time of induction, however, this must have not been dexamethasone. Thus, the control arm was induction of anti-emetic of the anaesthetist's choice (not dexamethasone) prior to commencement of surgery.

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

The SAEs were collected for all patients in the study from the first trial treatment to 30 days after the last trial treatment.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Dexamethasone
-----------------------	---------------

Reporting group description:

Patients who underwent laparoscopic or open gastrointestinal resections for malignant or benign pathology were randomised, in a 1:1 ratio, between 8mg IV dexamethasone and control. All patients were to be given one additional anti-emetic at the time of induction, however, this must have not been dexamethasone. Thus, the intervention treatment arm was: 8 mg IV dexamethasone (plus one other anti-emetic of the anaesthetist's choice) following induction of anaesthesia but prior to commencement of surgery.

Reporting group title	no Dexamethasone
-----------------------	------------------

Reporting group description:

Patients who underwent laparoscopic or open gastrointestinal resections for malignant or benign pathology were randomised, in a 1:1 ratio, between 8mg IV dexamethasone and control. All patients were to be given one additional anti-emetic at the time of induction, however, this must have not been dexamethasone. Thus, the control arm was induction of anti-emetic of the anaesthetist's choice (not dexamethasone) prior to commencement of surgery.

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: Non-serious adverse events were not collected within this trial.

subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Peptic ulceration with haemorrhage			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Peritonitis			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 1	0 / 0	
Rectal stump dehiscence			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Oesophagitis			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Small bowel obstruction			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Stoma complication			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Gastroenteritis viral			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Vomiting			

subjects affected / exposed	4 / 669 (0.60%)	7 / 666 (1.05%)	
occurrences causally related to treatment / all	0 / 4	2 / 7	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hepatobiliary disorders			
Acalculous Cholecystitis			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Skin and subcutaneous tissue disorders			
Other - Rectovaginal fistula			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Rash			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical emphysema			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Renal and urinary disorders			
Acute kidney injury			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Kidney infection			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Renal failure			
subjects affected / exposed	2 / 669 (0.30%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 2	0 / 0	
deaths causally related to treatment / all	0 / 2	0 / 0	

Urinary retention			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Abdominal Infection			
subjects affected / exposed	2 / 669 (0.30%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 2	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Abscess			
subjects affected / exposed	3 / 669 (0.45%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	1 / 3	1 / 1	
deaths causally related to treatment / all	0 / 1	0 / 0	
Catheter Infection			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Epididymitis			
subjects affected / exposed	1 / 669 (0.15%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 1	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Lower respiratory tract infection			
subjects affected / exposed	8 / 669 (1.20%)	19 / 666 (2.85%)	
occurrences causally related to treatment / all	3 / 8	5 / 19	
deaths causally related to treatment / all	0 / 0	0 / 0	
Candida infection			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Sepsis			
subjects affected / exposed	3 / 669 (0.45%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	1 / 3	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Urosepsis			

subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Skin infection			
subjects affected / exposed	1 / 669 (0.15%)	2 / 666 (0.30%)	
occurrences causally related to treatment / all	1 / 1	0 / 2	
deaths causally related to treatment / all	0 / 0	0 / 0	
Stoma site infection			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Urinary tract infection			
subjects affected / exposed	10 / 669 (1.49%)	8 / 666 (1.20%)	
occurrences causally related to treatment / all	6 / 10	4 / 8	
deaths causally related to treatment / all	0 / 0	0 / 0	
Vaginal infection			
subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Wound infection			
subjects affected / exposed	48 / 669 (7.17%)	47 / 666 (7.06%)	
occurrences causally related to treatment / all	37 / 48	32 / 47	
deaths causally related to treatment / all	0 / 0	0 / 0	
Clostridium difficile infection			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pneumonia			
subjects affected / exposed	0 / 669 (0.00%)	1 / 666 (0.15%)	
occurrences causally related to treatment / all	0 / 0	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Metabolism and nutrition disorders			
Hyperparathyroidism			

subjects affected / exposed	1 / 669 (0.15%)	0 / 666 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Dexamethasone	no Dexamethasone	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 669 (0.00%)	0 / 666 (0.00%)	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 May 2011	Protocol version 2.0 28/APR/2011. Substantial changes: Pilot study added to trial design.
26 November 2013	Protocol version 3.0 24/Oct/2013. Substantial changes: Clarification of sample size from 950 to 1320 patients; Clarification of primary outcome to 'the proportion of patients experiencing vomiting within 24 hours post-surgery'; Addition of secondary outcome 'number of episodes of vomiting post-surgery'.
30 January 2015	Protocol version 4.0 20/Jan/2015. Substantial changes: Definition of end of trial to be no later than 1 year after the last visit of the last patient undergoing the trial.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
