

Clinical trial results:

A Phase 2, Multicenter, Randomized, Double-Blind, Placebo-Controlled Study of the Safety, Clinical Activity and Pharmacokinetics of Bosutinib (PF-05208763) Versus Placebo in Subjects with Autosomal Dominant Polycystic Kidney Disease (ADPKD)

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 June 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 August 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to demonstrate that bosutinib reduces the rate of kidney enlargement in subjects with Autosomal Dominant Polycystic Kidney Disease (ADPKD) entering the study with total kidney volume (TKV) ≥ 750 cc and estimated glomerular filtration rate (eGFR) 60 \geq mL/min/1.73m².

Protection of trial subjects:

An independent external Data Monitoring Committee (eDMC) reviewed accumulating safety data on an ongoing basis. The eDMC may have, at any time, requested additional information from the sponsor. Based on these reviews, the eDMC had capacity to make recommendations to the sponsor that might impact the future conduct of the study. These may have included continuing the study as planned, amending safety-monitoring procedures, modifying the protocol or consent, or terminating the study. In addition, the eDMC was responsible for reviewing the safety and efficacy data for the interim analysis.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 December 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	169
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

172 subjects were enrolled in this study, of which 169 received at least 1 dose of study treatment.

Period 1

Period 1 title	Initial Treatment Period (24 Months)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Bosutinib 200 mg/day
------------------	----------------------

Arm description:

Subjects received bosutinib 200 mg tablet orally once daily (QD) in the morning with food for 24 months in the Initial Treatment Period (ITP). After a 30-day washout period, subjects who entered the Extended Treatment Period (ETP) continued to receive bosutinib 200 mg orally QD for up to 46 months.

Arm type	Experimental
Investigational medicinal product name	bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg in the morning with food

Arm title	Bosutinib 400 mg/day
------------------	----------------------

Arm description:

Subjects received bosutinib 400 mg tablet orally QD in the morning with food for 24 months in the ITP. All subjects were dose-reduced during the ITP based on a protocol amendment. Those who remained active in the study at the time of the amendment are represented in the bosutinib 400/200 mg/day group.

Arm type	Experimental
Investigational medicinal product name	bosutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400 mg in the morning with food

Arm title	Bosutinib 400/200 mg/day
------------------	--------------------------

Arm description:

Subjects received bosutinib 400 mg and were dose-reduced to 200 mg tablet (based on protocol amendment) orally QD in the morning with food for 24 months in the ITP. After a 30-day washout period, subjects who entered the ETP continued to receive bosutinib 200 mg orally QD for up to 46 months.

Secondary: Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at Months 12, 24, 25 and Early Termination

End point title	Change From Baseline in Estimated Glomerular Filtration Rate (eGFR) at Months 12, 24, 25 and Early Termination
End point description: eGFR was centrally evaluated. Glomerular filtration rate (GFR) is an index of kidney function that describes the flow of filtered fluid through the kidney. The Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) equation was used to calculate eGFR. Month 25 is the end of the ITPV. '99999' means data is 'not applicable'.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 30 days after last study drug administration

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another subject, or one subject may have experienced both a serious and non-serious event during the study.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Bosutinib 200 mg/day
-----------------------	----------------------

Reporting group description:

Subjects received bosutinib 200 mg tablet orally once daily (QD) in the morning with food for 24 months in the Initial Treatment Period (ITP). After a 30-day washout period, subjects who entered the Extended Treatment Period (ETP) continued to receive bosutinib 200 mg orally QD for up to 46 months.

Reporting group title	Bosutinib 400/200 mg/day
-----------------------	--------------------------

Reporting group description:

Subjects received bosutinib 400 mg and were dose-reduced to 200 mg tablet (based on protocol amendment) orally QD in the morning with food for 24 months in the ITP. After a 30-day washout period, subjects who entered the ETP continued to receive bosutinib 200 mg orally QD for up to 46 months.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received placebo tablet orally QD in the morning with food for 24 months in the ITP. After a 30-day washout period, subjects who entered the ETP continued to receive placebo matched bosutinib QD for up to 46 months.

Reporting group title	Bosutinib 400 mg/day
-----------------------	----------------------

Reporting group description:

Subjects received bosutinib 400 mg tablet orally QD in the morning with food for 24 months in the ITP. All subjects were dose-reduced during the ITP based on a protocol amendment. Those who remained active in the study at the time of the amendment are represented in the bosutinib 400/200 mg/day group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 February 2012	Reduced sample size from 275 subjects to 190 subjects. Changed secondary objectives to investigation of eGFR over the study and removed demonstration that a reduction in rate of kidney enlargement is predictive of a reduction in decline in eGFR.
07 October 2013	Reduced dose for Cohort B from 400 mg/day to 200 mg/day and removed the matching placebo for subjects in the 200 mg/day cohort.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
