Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 April 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate improvement in progression-free survival (PFS), defined as the time from randomization to the date of disease progression or death due to any cause, in patients with bulky fludarabine refractory (BFR) CLL receiving ofatumumab (OFA) compared to physicians' choice (PC) of treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 April 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Worldwide total number of subjects	122
EEA total number of subjects	79

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	70
From 65 to 84 years	52
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Note: The 'Total Participants' in the Baseline Characteristics Table and in most of the Efficacy results Tables should be either Any OFA + Physician's Choice or OFA extended + OFA observation + OFA + Physician's Choice instead of the automatic calculated Total number indicated.

Pre-assignment

Screening details:

Participants(par) were randomized to receive an Open-Label treatment(trt) of ofatumumab(OFA) or a physicians choice(PC) trt for up to 24 weeks. OFA par without progressive disease(PD) underwent a second randomization to receive an additional 24 weeks of OFA or no further trt. PC par who developed PD had the option to receive OFA salvage therapy.

Period 1

Period 1 title	24-Week Randomization 1
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Any Ofatumumab

Arm description:

Participants (par.) were randomized to receive ofatumumab (OFA) at Randomization 1. Par. were initially administered OFA 300 milligrams (mg) intravenously (IV). Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. Following Randomization 1, par. not demonstrating PD entered Randomization 2 (OFA Extended or OFA Observation); or par. entered Survival Follow-up (SFU) if demonstrating progressive disease (PD). During Randomization 2, par. either received another 24 weeks of OFA 2000 mg every 4 weeks (OFA Extension) or received no further treatment (trt) (OFA Observation). Par. entered Follow-up until withdrawal or the end of study (60 months). Par only entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Arm type	Experimental
Investigational medicinal product name	Ofatumumab
Investigational medicinal product code	OMB157
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

OFA was infused intravenously with an initial dose of 300 mg, followed 1 week later with 2000 mg once weekly for 7 weeks, followed 4 weeks later by one infusion of 2000 mg every 4 weeks for 4 infusions, for a total of 12 infusions over 24 weeks.

Arm title	Physician's Choice (PC)
------------------	-------------------------

Arm description:

Par. randomized to receive PC trt during Randomization 1 were admin. treatments approved for Chronic Lymphocytic Leukaemia (CLL) & well-established standards of care as prescribed with standard dose & route. Experimental therapies or any doses beyond approved/standard of care dose ranges were not allowed. Par. who developed PD during PC trt or Follow-up had the option to receive (single-agent) OFA salvage trt. Par. received an initial IV dose of OFA 300 mg. One week later, par. received OFA 2000 mg followed by 7 weekly infusions of OFA 2000 mg, followed by infusions of OFA 2000 mg every 4 weeks until Week 48, for max. trt duration of 48 weeks. Par. entered Follow-up after OFA salvage trt until withdrawal or the end of study (60 months). Par. entered SFU if demonstrating PD during OFA salvage trt. Only the survival status & anti-cancer therapy information was collected in the SFU. Par. did not receive OFA salvage trt & demonstrated PD, entered SFU. Of 43 par 22 went to OFA salvage arm.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Various PC therapies that were approved for CLL at the time of the study
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

PC therapies were infused intravenously with an initial dose of 300 mg, followed 1 week later with 2000 mg once weekly for 7 weeks, followed 4 weeks later by one infusion of 2000 mg every 4 weeks for 4 infusions, for a total of 12 infusions over 24 weeks.

Number of subjects in period 1	Any Ofatumumab	Physician's Choice (PC)
Started	79	43
Completed	60	33
Not completed	19	10
Physician decision	4	5
Consent withdrawn by subject	5	-
Adverse event, non-fatal	10	5

Period 2

Period 2 title	24-Week Randomization 2
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Ofatumumab Extended (OFA Ext)

Arm description:

Par. randomized to receive OFA at Randomization 1 and at Randomization 2. Only the par. who did not demonstrate PD during the first 24 weeks of OFA therapy entered Randomization 2. At Randomization 1, par. were initially administered OFA 300 mg IV. Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. Par. randomized to Randomization 2 continued to receive OFA 2000 mg IV every 4 weeks for another 24 weeks. Par. entered Follow-up after the treatment period until withdrawal or the end of study (60 months). Par. entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Arm type	Experimental
Investigational medicinal product name	Ofatumumab
Investigational medicinal product code	OMB157
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

OFA was infused intravenously with an initial dose of 300 mg, followed 1 week later with 2000 mg once weekly for 7 weeks, followed 4 weeks later by one infusion of 2000 mg every 4 weeks for 4 infusions,

for a total of 12 infusions over 24 weeks.

Arm title	Ofatumumab Observation (OFA Observ.)
------------------	--------------------------------------

Arm description:

Par. randomized to receive OFA at Randomization 1 and receiving no treatment at Randomization 2. Only the par. who did not demonstrate PD during the first 24 weeks of OFA therapy entered Randomization 2. At Randomization 1, par. were initially administered OFA 300 mg IV. Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. Par. randomized to Randomization 2 received no treatment for another 24 weeks. Par. entered Follow-up after the treatment period until withdrawal or at end of study (60 months). Par. entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Arm type	Experimental
Investigational medicinal product name	Ofatumumab
Investigational medicinal product code	OMB157
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

During Randomization 2, par. either received another 24 weeks of OFA 2000 mg every 4 weeks (OFA Extension) or received no further treatment (trt) (OFA Observation). Par. entered Follow-up until withdrawal or the end of study (60 months). Par. only entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Reporting group title	Physician's Choice (PC)
-----------------------	-------------------------

Reporting group description:

Par. randomized to receive PC trt during Randomization 1 were admin. treatments approved for Chronic Lymphocytic Leukaemia (CLL) & well-established standards of care as prescribed with standard dose & route. Experimental therapies or any doses beyond approved/standard of care dose ranges were not allowed. Par. who developed PD during PC trt or Follow-up had the option to receive (single-agent) OFA salvage trt. Par. received an initial IV dose of OFA 300 mg. One week later, par. received OFA 2000 mg followed by 7 weekly infusions of OFA 2000 mg, followed by infusions of OFA 2000 mg every 4 weeks until Week 48, for max. trt duration of 48 weeks. Par. entered Follow-up after OFA salvage trt until withdrawal or the end of study (60 months). Par. entered SFU if demonstrating PD during OFA salvage trt. Only the survival status & anti-cancer therapy information was collected in the SFU. Par. did not receive OFA salvage trt & demonstrated PD, entered SFU. Of 43 par 22 went to OFA salvage arm.

Reporting group title	Ofatumumab Extended (OFA Ext)
-----------------------	-------------------------------

Reporting group description:

Par. randomized to receive OFA at Randomization 1 and at Randomization 2. Only the par. who did not demonstrate PD during the first 24 weeks of OFA therapy entered Randomization 2. At Randomization 1, par. were initially administered OFA 300 mg IV. Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. Par. randomized to Randomization 2 continued to receive OFA 2000 mg IV every 4 weeks for another 24 weeks. Par. entered Follow-up after the treatment period until withdrawal or the end of study (60 months). Par. entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Reporting group title	Ofatumumab Observation (OFA Observ.)
-----------------------	--------------------------------------

Reporting group description:

Par. randomized to receive OFA at Randomization 1 and receiving no treatment at Randomization 2. Only the par. who did not demonstrate PD during the first 24 weeks of OFA therapy entered Randomization 2. At Randomization 1, par. were initially administered OFA 300 mg IV. Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. Par. randomized to Randomization 2 received no treatment for another 24 weeks. Par. entered Follow-up after the treatment period until withdrawal or at end of study (60 months). Par. entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Reporting group title	OFA first Randomization Only (OFA FRO)
-----------------------	--

Reporting group description:

Participants (par.) were randomized to receive ofatumumab (OFA) at Randomization 1. Par. were initially administered OFA 300 milligrams (mg) intravenously (IV). Beginning at Week 2, par. were administered OFA 2000 mg once weekly for 7 weeks, followed by 4 infusions of OFA 2000 mg every 4 weeks for a total of 12 infusions over 24 weeks. These participants were only randomized once and did not get make it to the second randomization. Par. entered SFU if demonstrating PD during the study. Only the survival status and anti-cancer therapy information was collected in the SFU.

Primary: Progression-free Survival (PFS) as assessed by Independent Review Committee (IRC)

End point title	Progression-free Survival (PFS) as assessed by Independent Review Committee (IRC)
-----------------	---

End point description:

PFS is the interval of time between the date of first randomization to the date of disease progression (PD) or death due to any reason, whichever occurred first. The date of PD was defined as the first occurrence of any criteria of progression. PD criteria requires at least one of the following: progression of lymphadenopathy, $\geq 50\%$ increase in liver or spleen size, $\geq 50\%$ increase in number of lymphocytes per microliter, more aggressive histology, occurrence of cytopenia after treatment attributable to CLL. Disease progression was determined according to the 2008 International Workshop for Chronic Lymphocytic Leukaemia (IWCLL) update of the National Cancer Institute-sponsored Working

Group CLL Guidelines for Response (NCI-WG). PFS was censored at the time of the last follow up for participants who have neither progressed or died.

End point type	Primary

Secondary: Time to response as assessed by the IRC

End point title	Time to response as assessed by the IRC ^[4]
-----------------	--

End point description:

Time to response is defined as the time from randomization to the first response (Complete Remission[CR], Complete Remission with incomplete bone marrow recovery[CRi], partial response[PR], or nodular PR[nPR]). CR(all the criteria at least 2 months after last treatment): no lymphadenopathy(Ly) > 1.5 cm/ hepatomegaly/ splenomegaly/ constitutional symptoms; neutrophils >1500 per microliter(μL), platelets(PL) >100,000/μL, hemoglobin(Hb) >11 grams/deciliter(g/dL), lymphocytes(LC) <4000/μL, bone marrow(BM) sample must be normocellular for age, <30% LC, no lymphoid nodule. CRi: CR criteria, persistent anemia/thrombocytopenia/neutropenia unrelated to CLL but related to drug toxicity. PR: >=50% decrease in LC, Ly, size of liver and spleen and at least one of the following results: PL >100,000/μL or 50% improvement over Baseline(BL), Hb >11 g/dL or 50% improvement over BL. nPR: persistent nodules BM. Participants with unknown or missing responses were considered as non-responders.

End point type	Secondary
----------------	-----------

End point timeframe:

From the randomization date up to 60 months post the randomization date.

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: No statistical analysis was done for this endpoint.

Statistical analyses

Secondary: Duration of response as assessed by the IRC

End point title	Duration of response as assessed by the IRC ^[5]
-----------------	--

End point description:

DOR is defined as the time from the initial response (CR, CRi, nPR, or PR) to the first documented sign of PD or death due to any cause. PD requires at least one of the following: lymphadenopathy, appearance of any new lesion such as enlarged lymph nodes (>1.5 cm) spleen or liver or other infiltrates or an increase by 50% or more in the greatest diameter of any previous site; an increase by 50% or more in the previously noted enlargement of the liver or spleen, an increase by 50% or more in the numbers of blood lymphocytes with at least 5000 lymphocytes per microliter, transformation to a more aggressive histology, or occurrence of cytopenia attributable to chronic lymphocytic leukaemia. Par. who were alive and had not progressed at the time of analysis or if a progression event occurred after extensive lost-to-follow-up time (≥ 12 weeks) were censored at the date of the last visit with adequate assessment. Par. with unknown or missing responses were considered as non-responders.

End point type	Secondary
----------------	-----------

End point timeframe:

From the randomization date up to 60 months post the randomization date.

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: No statistical analysis was done for this endpoint.

Secondary: Mean Immunoglobulin (Ig) antibodies IgA, IgG, and IgM over time

End point title	Mean Immunoglobulin (Ig) antibodies IgA, IgG, and IgM over time
-----------------	---

End point description:

Immunoglobulins or antibodies are large proteins used by the immune system to identify and neutralize foreign particles such as bacteria and viruses. Their normal blood levels indicate proper immune status. Low levels indicate immuno-suppression. IgA, IgG, and IgM were measured in the blood samples of the participants. Immunoglobulin testing was performed at Screening (SCR), Cycle 3 Week 4 (C3W4), Cycle 7 Week 4 (C3W4), Cycle 9 Week 4 (C3W4), 6 Month Follow-up Visit (6M FU), 9 Month Follow-up (9M FU), 12 Month Follow-up (12M FU), 18 Month Follow-up (18M FU), 24 Month Follow-up (24M FU), 30 Month Follow-up (30M FU), 36 Month Follow-up (36M FU), 42 Month Follow-up (42M FU). A cycle is defined as the time between one round of treatment until the start of the next round.

End point type	Secondary
----------------	-----------

End point timeframe:

Screening and every 3 months during treatment, every 6 months after last treatment until PD or until 42 Month Follow-up Visit

Secondary: Number of participants who were positive or negative for Human Anti-Human Antibodies (HAHA) post-OFA therapy

End point title	Number of participants who were positive or negative for Human Anti-Human Antibodies (HAHA) post-OFA therapy
-----------------	--

End point description:

The presence of HAHA in human serum was determined using a validated electrochemiluminescent assay in a multi-tier assay format. All samples were first assessed in a screening (SCR) assay, and the potential positive (Pos) samples were further tested in the confirmation (CNF) assays. Confirmed positives were reported as HAHA positive and titer was determined for each positive sample. The drug tolerance of the HAHA assay is 200 microgram/milliliter (µg/mL); thus, samples that tested negative in the assay and had ofatumumab concentrations no more than 200 µg/mL were considered as conclusive negative (Neg) results.

Statistical analyses

No statistical analyses for this end point

Secondary: Changes from Baseline in European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire, Chronic Lymphocytic Leukaemia 16 item module (EORTC QLQ-CLL 16)

End point title	Changes from Baseline in European Organisation for Research and Treatment of Cancer Quality of Life Questionnaire, Chronic Lymphocytic Leukaemia 16 item module (EORTC QLQ-CLL 16)
-----------------	--

End point description:

The EORTC QLQ-CLL16 is comprised of 16 questions that address 5 domains of health-related quality of life (HRQoL) important in CLL. There are 4 multi-item scales – fatigue (2 items), treatment side effects ([TSE], 4 items), disease symptoms (disease effects scale [DES], 4 items), and infection (4 items) – and single item scales (social activities [Social Problems (SP) Scale] and future health worries[Future Health (FH) Scale]). These are measured on a four point scale where 1 = not at all and 4 = very much. These scores are transformed to give a rating from 0 – 100, where 0 =no symptoms or problems and 100 = a severe symptoms or problems. EORTC QLQ-CLL16 was assessed at Screening; Week (W) 12 (W4 of Cycle[C] 3), W24 (W4C6), W36 (W4C9), W48 (W4C13); during Follow-up which was every month for Months (M) 1-6, every 8 weeks for M7-12 and every 3 months up to M60; and then at PD.

End point type	Secondary

Statistical analyses

No statistical analyses for this end point

Secondary: Mean Health Change Questionnaire (HCQ) score

End point title	Mean Health Change Questionnaire (HCQ) score
End point description:	
The HCQ consists of a single question in which the participant is asked if he/she has experienced any change in his/her health overall since beginning the study. For HCQ, values from 1 to 9 were assigned to the 9 responses in the HCQ questionnaire, ranging from 1 for 'my health is a great deal better' to 9 for 'my health is a great deal worse' since the beginning of the study. A score of 3 or less indicates improvement from Baseline. HCQ was assessed at Screening; Week (W) 12 (W4 of Cycle[C] 3), W24 (W4C6), W36 (W4C9), W48 (W4C13); during follow-up which was every month for Months 1-6, every 8 weeks for M7-12 and every 3 months up to M60; and then at PD..	
End point type	Secondary
End point timeframe:	
From the randomization date up to 60 months post the randomization date.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAEs & AEs were collected from 1st dose to 60 days after last dose of study medication & until end of FU period for SAEs unless initiation of subsequent anti-CLL therapy. AEs reported in this record - from date of FP First Treatment until LPLV

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 February 2013	Amendment 1 was applicable to all study sites that were required to include information from the Study Procedures Manual
11 December 2013	The main purpose of this amendment was to incorporate the recommendations related to HBV reactivation which were based on the update to internal global safety information for ofatumumab. Recommendations were given on HBV screening, monitoring and management for all subjects who received ofatumumab and all subjects who completed treatment with ofatumumab in the previous 12 months before the amendment and were in the follow-up phase of the protocol.
25 February 2016	Change in study sponsorship from GSK to Novartis. Other clarifications have been included in this amendment: List of abbreviations from CRO to Clinical Research Organization, change in time Period and Frequency of Detecting AEs and SAEs, Prompt Reporting of Serious Adverse Events and Other Events to Novartis, Pregnancy Reporting, Study and Site Closure, record Retention, Provision of Study Results to Investigators, Posting of Information on Publically Available Clinical Trials Registers and Publication

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.

Notes:
