Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000078-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 April 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 April 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to assess the safety and efficacy of adding cinacalcet to the current treatment of secondary hyperparathyroidism in children currently receiving dialysis compared to a treatment regimen that does not include cinacalcet.

Protection of trial subjects:

This study was conducted in accordance with applicable country regulations and International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines.

All parents or legally acceptable representatives provided written informed consent before the subject underwent any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy:

All participants, regardless of treatment assignment, received standard of care with vitamin D sterols (calcitriol and its analogs), as prescribed by the treating physician.

Evidence for comparator: -

Actual start date of recruitment	28 June 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 23
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Slovakia: 1
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	Russian Federation: 7
Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Mexico: 1
Worldwide total number of subjects	43
EEA total number of subjects	11

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	11
Adolescents (12-17 years)	32
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The first patient was enrolled on 28 June 2011 and the last patient enrolled was on 15 January 2013. Eligible participants were between the ages of 6 to less than 18 years old who had chronic kidney (CKD) and secondary hyperparathyroidism treated with either hemodialysis or peritoneal dialysis for ≥ 2 months.

Pre-assignment

Screening details:

This study consisted of a 30-week randomized, double-blind phase followed by a 30-week open-label phase. Participants were randomized 1:1 to receive either cinacalcet or placebo in the double-blind phase. All participants received cinacalcet in the open-label phase.

Period 1

Period 1 title	Double-blind Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Participants received standard of care and placebo once daily for 30 weeks during the double-blind phase.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo tablets and capsules for sprinkling identical to active treatment.

Arm title	Cinacalcet
------------------	------------

Arm description:

Participants received standard of care and cinacalcet once daily for 30 weeks during the double-blind phase. The starting dose of cinacalcet was ≤ 0.20 mg/kg based on dry weight, and could be titrated up according to plasma iPTH and serum calcium levels every 4 weeks until Week 24 to a maximum dose of 4.2 mg/kg.

Arm type	Experimental
Investigational medicinal product name	Cinacalcet
Investigational medicinal product code	
Other name	Sensipar, Mimpara
Pharmaceutical forms	Capsule, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cinacalcet was prepared for oral administration as both capsules for sprinkling and film coated tablets for swallowing.

Number of subjects in period 1	Placebo	Cinacalcet
Started	21	22
Received Investigational Product	21	22
Completed	8	4
Not completed	13	18
Consent withdrawn by subject	2	-
Administrative decision	7	9

Non-compliance	-	1
Protocol-specified criteria	2	6

Period 2

Period 2 title	Open-label Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/Cinacalcet

Arm description:

Participants who received standard of care and placebo during the double-blind phase received cinacalcet with standard of care for 30 weeks during the open-label phase. The starting dose of cinacalcet was ≤ 0.20 mg/kg based on dry weight, and could be titrated up according to plasma iPTH and serum calcium levels every 4 weeks up to Week 54 to a maximum dose of 4.2 mg/kg.

Arm type	Open-label
Investigational medicinal product name	Cinacalcet
Investigational medicinal product code	
Other name	Sensipar, Mimpara
Pharmaceutical forms	Capsule, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cinacalcet was prepared for oral administration as both capsules for sprinkling and film coated tablets for swallowing.

Arm title	Cinacalcet/Cinacalcet
------------------	-----------------------

Arm description:

Participants who received standard of care and cinacalcet during the double-blind phase continued to receive cinacalcet with standard of care for an additional 30 weeks during the open-label phase. Regardless of the titration level reached at the last dose of IP in the double-blind phase, all participants started titration at ≤ 0.20 mg/kg based on dry weight and could be titrated up according to plasma iPTH and serum calcium levels every 4 weeks up to Week 54 to a maximum dose of 4.2 mg/kg.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Cinacalcet
Investigational medicinal product code	
Other name	Sensipar, Mimpara
Pharmaceutical forms	Capsule, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Cinacalcet was prepared for oral administration as both capsules for sprinkling and film coated tablets for swallowing.

Number of subjects in period 2	Placebo/Cinacalcet	Cinacalcet/Cinacalcet
Started	8	4
Received investigational product	6	4
Completed	1	1
Not completed	7	3
Never received investigational product	2	-

Primary: Percentage of Participants Achieving $\geq 30\%$ Reduction in Mean iPTH From Baseline to the Efficacy Assessment Phase

End point title	Percentage of Participants Achieving $\geq 30\%$ Reduction in Mean iPTH From Baseline to the Efficacy Assessment Phase
End point description: The efficacy assessment value is based on the scheduled assessment(s) taken during the efficacy assessment phase (EAP; Weeks 25 - 30). When multiple assessments were available, the average of those was used. If an efficacy measurement during the EAP was missing, the mean of the last 2 available post-baseline values in the dose-titration phase was used. If only one post-baseline value was available, this single value was used. The full analysis set, which includes all randomized participants with at least 1 post-baseline assessment, was used for the analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2011	The following changes were made to address FDA comments: <ul style="list-style-type: none">- changed PK samples from being an optional study for hemodialysis subjects only to being mandatory for both hemodialysis and peritoneal dialysis subjects- amended the post-dose collection windows for hemodialysis subjects- specified that approximately 35% of enrolled subjects were to be in the younger age group of 6 to less than 12 years- changed growth velocity endpoints from exploratory endpoints to secondary endpoints- included infections as an adverse event of interest
31 January 2012	<ul style="list-style-type: none">- replaced Appendix E with a newly written Investigational Product Instruction Manual- assisted with enrollment challenges by changing the entry criterion for iPTH to a value that better accommodated regional differences in iPTH thresholds for initiating treatment- at the request of EMA, the exploratory endpoint of assessing the percent change in ionized calcium from baseline to the mean value during the EAP was changed to a secondary endpoint
20 June 2012	<ul style="list-style-type: none">- added worksheet on adverse events as Appendix E- clarified/updated definition of standard of care, entry criteria, and concomitant therapy- updated safety reporting language to comply with the European Union Clinical Trial Directive

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early with a smaller sample size. However, the study was still sufficiently powered for the double-blind phase. The data collected in the open-label phase is very sparse.

Notes:
