

Clinical trial results:

A randomized phase II study to determine the efficacy and tolerability of two doses of eribulin plus lapatinib in trastuzumab pre-treated patients with HER2-positive metastatic breast cancer

Summary

EudraCT number	2010-023237-37
Trial protocol	DE
Global end of trial date	31 March 2015

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 March 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 March 2015
Global end of trial reached?	Yes
Global end of trial date	31 March 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

1. To assess the time to progression (TTP) of eribulin at a dose of 1.23 mg/m² IV days 1+8, q 21 and eribulin given at a dose of 1.76 mg/m² IV day 1, q d21 both in combination with lapatinib.
2. To assess the safety and toxicity of both treatment arms.

Protection of trial subjects:

The trial protocol including amendments, the patient information and the informed consent were reviewed and approved from a properly constituted IRB/IEC for each site prior to the study start. The trial was in compliance with the International Conference on Harmonization (ICH) - Harmonized Tripartite Guideline for Good Clinical Practice (GCP) (E6), and the Commission Directives in the European Community as well as with the applicable German national laws and regulations, and with Declaration of Helsinki and its revisions in all aspects of preparation, monitoring, reporting, auditing, and archiving. IDMC was to ensure the ethical conduct of the trial and to protect patients' safety interests in this study

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 January 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	10 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 41
Worldwide total number of subjects	41
EEA total number of subjects	41

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	32
From 65 to 84 years	9
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Approximately 2.5years (Q-I 2012–Q-III 2014) in 49 sites in Germany. 43 pts were randomized, 41 started treatment (eribulin 1.23mg/m² d1,8: 21; eribulin 1.76mg/m² d1: 20). Study was amended in Nov 2013 to prolong recruitment for being behind planned schedule. Despite that, study was stopped on 7th July 2014 due to persistent difficulty in accrual.

Pre-assignment

Screening details:

Histologically HER2+ BC; Advanced BC not suitable for surgery or RT alone;

Previous systemic treatments eligible:

Adjuvant and <=3 CT regimen for advanced BC;

Previous trastuzumab as (neo)adjuvant for eBC and/or 1st and/or 2nd line for mBC;

Prior max. cum. dose <= 360 mg/m² for A and 720 mg/m² for E;

ECOG 0-2, normal cardiac eject. function

Pre-assignment period milestones

Number of subjects started	41
Number of subjects completed	41

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Eribulin 1.23
------------------	---------------

Arm description:

Eribulin 1.23 mg/m² IV days 1+8, q d21

Arm type	Experimental
Investigational medicinal product name	Eribulin mesylate (Halaven)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin 1.23mg/m² IV as a bolus over 2-5 minutes, days 1+8, q d21

Arm title	Eribulin 1.76
------------------	---------------

Arm description:

Eribulin 1.76 mg/m² IV day 1 q d21

Arm type	Experimental
Investigational medicinal product name	Eribulin mesylate (Halaven®)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eribulin 1.76 mg/m² IV as a bolus over 2-5 minutes , day 1, q d21

Number of subjects in period 1	Eribulin 1.23	Eribulin 1.76
Started	21	20
Completed	14	13
Not completed	7	7
Physician decision	2	-
Adverse event, non-fatal	1	-
Hematological tox. related to study med	-	1
Other reasons	2	3
Patient wish	-	1
Non-hematol. tox. related to study med	1	2
death (not tumor-related)	1	-

Baseline characteristics

Reporting groups

End points

End points reporting groups

Reporting group title	Eribulin 1.23
Reporting group description: Eribulin 1.23 mg/m ² IV days 1+8, q d21	
Reporting group title	Eribulin 1.76
Reporting group description: Eribulin 1.76 mg/m ² IV day 1 q d21	

Primary: Time to progression (TTP)

End point title	Time to progression (TTP) ^[1]
End point description: Time to progression (TTP) is defined as the time period between randomization and documented disease progression or disease-related death. Patients with no progression or tumor-related death reported were censored on the date of the last contact ("last tumor assessment", "last follow up date" or "last date in drug log").	
End point type	Primary
End point timeframe: time in months between randomization and first event	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Kaplan-Meier estimates were presented graphically; median time to progression was reported in each arm together with the 95% confidence interval (CI). No test of significance was planned to compare treatment arms

End point values	Eribulin 1.23	Eribulin 1.76		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	21 ^[2]	20 ^[3]		
Units: month				
number (confidence interval 95%)	8.1 (4.8 to 9.4)	6.5 (4.6 to 13.4)		

Notes:

[2] - 19events

[3] - 17events

Statistical analyses

No statistical analyses for this end point

Secondary: Overall survival

End point title	Overall survival
End point description: Overall survival (OS) is defined as the time period between randomization and death due to any cause. Patients with no death reported were censored on the date of the last contact ("last tumor assessment", "last follow up date" or "last date in drug log").	
End point type	Secondary
End point timeframe: time in months between randomization and death	

End point values	Eribulin 1.23	Eribulin 1.76		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	21 ^[4]	20 ^[5]		
Units: month				
number (confidence interval 95%)	23.1 (12.5 to 35.0)	23.2 (13.7 to 30.1)		

Notes:

[4] - 14 events

[5] - 12 events

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All adverse events occurring during the study treatment period were reported

Adverse event reporting additional description:

Predefined AEs any grade (1-4) are reported per Patient.

Other AEs reported as free-text are given irrespective of preferred terms if occurring in >20%

For SAEs relatedness was not tabulated, therefore here we conservatively record all SAEs as related to treatment

Assessment type	Systematic
