Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To determine the number of subjects that experienced a decrease in Crohn's Disease Activity Index (CDAI) of at least 70 points by the Week 8 or Week 12 assessment.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating in or derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial subjects.

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The 4th arm is placebo control. Hence, PK evaluations were not done.
