Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000139-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 December 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 September 2012
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1. To demonstrate immunologic noninferiority of 2 doses of 2 different formulations of MenACWY vaccine to a single dose of MenACWY vaccine, as measured by the percentage of subjects with hSBA seroresponse against *N. meningitidis* serogroups A, C, W-135, and Y, at 30 days after the second vaccination, in healthy adolescents and young adults aged 10 through 25 years.
 2. To identify the optimal formulation of MenACWY vaccine compared with a single dose of Menveo (MenACWY) and with 2 doses of rMenB+OMV in healthy adolescents and young adults aged 10 through 25 years, based on the overall desirability index.
- The overall desirability index is based on immunogenicity parameters (GMT ratios against *N. meningitidis* serogroups A, C, W-135, and Y and serogroup B test strains at 30 days after the second vaccination) and reactogenicity parameters (percentages of doses associated with severe local and severe systemic solicited AEs following any vaccination).

Protection of trial subjects:

This trial was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, and that are consistent with Good Clinical Practice (GCP), and the applicable regulatory requirement(s) for the country in which the trial was conducted according to International Conference on Harmonisation (ICH) guidelines, and applicable Standard Operating Procedures (SOPs)..

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 August 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 132
Country: Number of subjects enrolled	United States: 352
Worldwide total number of subjects	484
EEA total number of subjects	132

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	169
Adolescents (12-17 years)	163
Adults (18-64 years)	152
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

8 sites in US, 5 sites in Poland

Pre-assignment

Screening details:

All enrolled subjects were included in the trial

Period 1

Period 1 title	Enrolled (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	ABCWY+OMV

Arm description:

Subjects in this group received two doses of ABCWY+OMV combination vaccine, administered two months apart

Arm type	Experimental
Investigational medicinal product name	ABCWY+OMV
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5ml

Arm title	ABCWY+qOMV
------------------	------------

Arm description:

Subjects in this group received two doses of ABCWY+qOMV combination vaccine, administered two months apart

Arm type	Experimental
Investigational medicinal product name	ABCWY+qOMV
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5ml

Arm title	rMenB +OMV
------------------	------------

Arm description:

Subjects in this group received two doses of rMenB + OMV vaccine, administered two months apart

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	rMenB+OMV
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5ml	
Arm title	PBO/ACWY

Arm description:

Subjects in this group received one dose of placebo followed by one dose of MenACWY vaccine two months later.

Arm type	Active comparator
Investigational medicinal product name	PBO/ACWY
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5ml

Primary: 1.Percentages of Subjects With a Seroresponse Against N.Meningitidis Serogroups A,C,W-135,Y, After Receiving Different Formulations of MenABCWY Combination Vaccine.

End point title	1.Percentages of Subjects With a Seroresponse Against N.Meningitidis Serogroups A,C,W-135,Y, After Receiving Different Formulations of MenABCWY Combination Vaccine. ^[1]
End point description:	
Non-inferiority of immune response of two doses of two different formulations of MenABCWY vaccine to a single dose of MenACWY vaccine as measured by the percentage of subjects with hSBA seroresponse against N.meningitidis serogroups A,C,W and Y. Seroresponse is defined as: 1. For subjects with a pre-vaccination hSBA titer < 1:4, a post-vaccination hSBA titer ≥ 1:8; 2. For subjects with a pre-vaccination hSBA titer ≥ 1:4, an increase in hSBA titer of at least four times the prevaccination titer. Functional bactericidal antibodies directed against serogroups A,C,W,Y meningococci were measured with a serum bactericidal activity assay using human serum as the source of exogenous complement (hSBA).	
End point type	Primary
End point timeframe:	
One month after the second vaccination (Day 91)	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: No statistical analysis is associated to this endpoint.

Primary: 2.Desirability Index for Each Vaccine Group, Based on Immunogenicity and Reactogenicity Parameters

End point title	2.Desirability Index for Each Vaccine Group, Based on Immunogenicity and Reactogenicity Parameters ^{[10][11]}
-----------------	--

End point description:

The overall desirability index (DI) used to identify the optimal formulation of the combination vaccine was based on immunogenicity and reactogenicity parameters (on a scale of 0 to 1, with 0 for an undesirable response and 1 for a highly desirable response) as follows: Between-group ratios of hSBA GMTs were calculated, adjusted for prevaccination titer and center, against serogroups A, C, W, and Y (ABCWY+OMV group or ABCWY+qOMV group vs. Placebo/ACWY group) and against the 4 serogroup B test strains (ABCWY+OMV group or ABCWY+qOMV group vs. rMenB+OMV group). Reactogenicity was measured by the percentage of doses associated with severe local and systemic solicited AEs within 3 days following vaccination. Each immunogenicity and reactogenicity endpoint was assigned its own DI based on predefined desirability functions. The overall DI was calculated using the weighted geometric mean of the DI values of each of the ten parameters to derive an overall DI for each formulation

End point type	Primary

subjects affected / exposed	12 / 108 (11.11%)		
occurrences (all)	18		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 May 2011	<ul style="list-style-type: none">- replacement of study formulation MenABx2CWY (i.e., MenABCWY vaccine formulation containing a 'double' dose of rMenB, without OMV) with the MenABCWY+OMV formulation;- addition of rMenB+OMV as a reference vaccine, thus adding a fourth study group and increasing the sample size from 360 to 480 subjects;- addition of the third secondary objective (comparison with rMenB+OMV vaccine);- broadening subjects' age range from 11 through 18 years to 10 through 25 years- a Data Monitoring Committee (DMC) was formed
06 July 2012	<ul style="list-style-type: none">- clarification that the purpose of the study was to select a MenABCWY formulation for further clinical development;- secondary immunogenicity endpoints to include hSBA titers of $\geq 1:8$ and 4-fold increase in hSBA titer for serogroup B strains
08 September 2012	<ul style="list-style-type: none">- addition of desirability model as the second primary immunogenicity objective

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
