Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 November 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 October 2012
Global end of trial reached?	Yes
Global end of trial date	17 July 2013
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of this study were:

- To evaluate the efficacy of 3 oral dosing regimens of fostamatinib compared with placebo when used as monotherapy in patients with active RA by assessment of the signs and symptoms of RA, as measured by Disease Activity Score based on a 28-joint count (DAS28) at Week 6.
- To evaluate whether the efficacy of 3 oral dosing regimens of fostamatinib were non-inferior to that of adalimumab when used as monotherapy in patients with active RA by assessment of the signs and symptoms of RA, as measured by DAS28 at Week 24.

Protection of trial subjects:

This study was performed in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with International Conference on Harmonisation/Good Clinical Practice (GCP) and applicable regulatory requirements and the AstraZeneca policy on Bioethics and Human Biological Samples.

Before enrolment of any patient into the study, the final clinical study protocol, including the final version of the informed consent form, was approved by the national regulatory authority or a notification to the national regulatory authority was done, according to local regulations. The study was approved or given a favourable opinion in writing by an Independent Ethics Committee (IEC) for each study centre. The investigator(s) at each centre ensured that the patient was given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Patients were also notified that they were free to discontinue investigational product (IP) and/or withdraw from the study at any time. The patient was given the opportunity to ask questions and allowed time to consider the information provided. The patient's signed and dated informed consent was obtained before conducting any procedure specifically for the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 January 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 53
Country: Number of subjects enrolled	United States: 50
Country: Number of subjects enrolled	Bulgaria: 33

Worldwide total number of subjects	265
EEA total number of subjects	111

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	241
From 65 to 84 years	24
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

452 patients were enrolled into the main study, 173 patients failed screening, 279 were randomised, 14 did not receive treatment (2, 5 and 2 for the fostamatinib doses, 3 for adalimumab and 2 for placebo). 265 were treated and are reported here as the full analysis set.

Pre-assignment

Screening details:

192 patients enrolled into a separate MRI sub-study (644 enrolled in total).

Period 1

Period 1 title	6 week placebo controlled study period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	FOSTA 100 MG BID PO
------------------	---------------------

Arm description:

Dosing Group A

Arm type	Experimental
Investigational medicinal product name	Fostamatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

100mg twice a day

Arm title	FOSTA 100 MG BID (4 WKS) THEN 150 MG QD PO

Primary: DAS28-CRP score - change from baseline to Week 6 compared to placebo

End point title	DAS28-CRP score - change from baseline to Week 6 compared to placebo
-----------------	--

End point description:

DAS28-CRP: Disease Activity Score based on a count of swollen and tender joints (out of 28 joints), blood test measures of inflammation (CRP) and the patient's own assessment. Scores can take any positive value with a lower value indicating a better clinical condition. Mean changes from baseline in DAS28-CRP score are shown at each visit and are presented as decreases from baseline (defined as baseline minus post-baseline) with larger changes indicative of a better clinical condition. ANCOVA = analysis of covariance, BID = twice daily, CRP = C-reactive protein, DMARD = disease-modifying anti-rheumatic drug, IR = inadequate response, LS = least squares, n/a = not applicable, PO = orally, QD = once a day, SC = subcutaneous.

lower limit	-30.01
upper limit	-6.25

Secondary: HAQ-DI - comparison of the change from baseline between fostamatinib and placebo at Week 6

End point title	HAQ-DI - comparison of the change from baseline between fostamatinib and placebo at Week 6
-----------------	--

End point description:

HAQ-DI: Health Assessment Questionnaire - Disability Index, a measure of physical function. The HAQ-DI score is calculated by summing the category scores from 8 sub-categories (ie, scores for patient ability in dressing and grooming, rising, eating, walking, hygiene, reach, grip and common daily activities) and dividing by the number of categories completed. The HAQ-DI score takes values between 0 and 3, with a higher score indicating greater disability. Non-responder imputation has been applied by carrying the baseline observation forward. ANCOVA = analysis of covariance, BID = twice daily, DMARD = disease-modifying anti-rheumatic drug, IR = inadequate response, LS = least squares, n/a = not applicable, PO = orally, qd = once a day, SC = subcutaneous.

Secondary: SF-36 - comparison of the change in PCS from baseline between fostamatinib and adalimumab at Week 24

End point title	SF-36 - comparison of the change in PCS from baseline between fostamatinib and adalimumab at Week 24
-----------------	--

End point description:

SF-36: 36 item short form health survey, as a measure of health-related quality of life. Scores for 8 sub-domains (Physical Functioning, Role-Physical, Bodily Pain, General Health, Vitality, Social Function, Role-Emotional and Mental Health) are derived and normalised to a scale of 0 to 100. The physical and mental component scores (PCS and MCS) are derived by multiplying each of these 8 scores by a constant, summing them and standardising against a population with a mean of 50, standard deviation of 10. A higher score represents a better quality of life. Mean changes from baseline score are presented as increases from baseline (defined as post-baseline minus baseline); larger changes indicate a better clinical condition. Mean refers to change in scores at Week 24. ANCOVA = analysis of covariance, BID = twice daily, DMARD = disease-modifying anti-rheumatic drug, IR = inadequate response, LS = least squares, PO = orally, QD = once a day, QoL = quality of life, SC = subcutaneous

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 March 2011	Added an imaging sub-study. This was reported separately. Restrictions for males wishing to father a child or donate sperm were removed.
28 September 2011	Patient discontinuing treatment were to be contacted every 12 weeks up to week 24 to collect follow-up safety outcomes data. All week 24 assessments were to be completed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
