Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 January 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 January 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to assess the immunogenicity of Daclizumab High Yield Process (DAC HYP) 150 mg administered every 4 weeks by subcutaneous (SC) injection using the pre-filled syringe (PFS) in subjects with relapsing-remitting multiple sclerosis (RRMS). The secondary objectives of this study are to characterize the pharmacokinetics (PK) of DAC HYP following single and multiple doses of DAC HYP administered by the PFS in a subset of participants with RRMS and to evaluate the effect of DAC HYP on the PK of probe drugs for cytochrome P450 (CYP) isoenzymes (CYP1A2, CYP2C9, CYP2C19, CYP2D6, and CYP3A).

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 November 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 42
Country: Number of subjects enrolled	Poland: 40
Country: Number of subjects enrolled	United States: 27
Country: Number of subjects enrolled	Hungary: 24
Worldwide total number of subjects	133
EEA total number of subjects	106

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	133
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Subject eligibility for the study was determined within 28 days prior to study entry.

Period 1

Period 1 title	Main Study or TP-DI Study
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Main Study

Arm description:

All subjects received DAC HYP 150 mg SC injections every 4 weeks over an initial 24-week treatment period (for a total of 6 injections), followed by a 20-week washout period.

Those subjects from the Main Study who enrolled in the Intensive PK sub-study underwent serial DAC HYP PK sampling over the first and the last dosing intervals (on Day 1 [Week 0] and again on Day 141 [Week 20], the last dosing visit).

Arm type	Experimental
Investigational medicinal product name	Daclizumab HYP
Investigational medicinal product code	BIIB019
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

DAC HYP was administered using a 1 mL pre-filled syringe

Investigational medicinal product name	Omeprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Oral omeprazole 40 mg (capsule). Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination.

Investigational medicinal product name	Vitamin K
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral vitamin K 10 mg (tablet). Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination. Vitamin K was used to counteract warfarin's anticoagulant effect prophylactically. If vitamin K tablets were not commercially available, alternate formulations such as SC or IV were used.

Investigational medicinal product name	Dextromethorphan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup
Routes of administration	Oral use

Dosage and administration details:

Oral dextromethorphan 30 mg (syrup). Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination.

Arm title	Therapeutic Protein-Drug Interaction (TP-DI) Sub-study
------------------	--

Arm description:

In Period 1 (Week -1), the probe-drug cocktail (consisting of oral midazolam 5 mg, caffeine 200 mg, S-warfarin 10 mg, vitamin K 10 mg, omeprazole 40 mg, and dextromethorphan 30 mg, where the oral vitamin K was used prophylactically to counteract warfarin's anticoagulant effect) was administered 7 days before the first dose of DAC HYP 150 mg in the 3-year extension phase.

In Period 2, pretreatment with DAC HYP 150 mg was administered at Weeks 0, 4, and 8. The probe-drug cocktail was administered 7 days after the third dose of DAC HYP.

Arm type	Experimental
Investigational medicinal product name	Daclizumab HYP
Investigational medicinal product code	BIIB019
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

DAC HYP was administered using a 1 mL pre-filled syringe

Investigational medicinal product name	Midazolam
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Syrup
Routes of administration	Oral use

Dosage and administration details:

Oral midazolam 5 mg. The preferred formulation was midazolam syrup formulation containing midazolam hydrochloride equivalent to 2 mg of midazolam/mL. Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination.

Investigational medicinal product name	Caffeine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral caffeine 200 mg (tablet or caplet). Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination.

Investigational medicinal product name	warfarin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral warfarin 10 mg (tablet). Part of the probe drug cocktail combination of drugs that was completely administered within 5 minutes. Subjects remained under fasting conditions for another 2 hours after receiving the oral drug combination.

Number of subjects in period 1	Main Study	Therapeutic Protein-Drug Interaction (TP-DI) Sub-study
Started	113	20
Enrolled in Intensive PK Substudy	26 ^[1]	0 ^[2]
Completed	105	20
Not completed	8	0
Consent withdrawn by subject	2	-
Adverse event, non-fatal	4	-
NotSpecified	2	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Twenty-six subjects from this arm were enrolled in the intensive PK substudy.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: No subjects from this arm were enrolled in the intensive PK substudy.

Period 2

Period 2 title	Extension Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Extension Phase
-----------	-----------------

Arm description:

After completion of the washout period from the Main Study or the TP-DI sub-study, eligible subjects had the option to resume monthly open-label treatment with DAC HYP 150 mg in the extension phase of the study for up to 3 additional years.

Arm type	Experimental
Investigational medicinal product name	Daclizumab HYP
Investigational medicinal product code	BIIB019
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

DAC HYP was administered using a 1 mL pre-filled syringe

Number of subjects in period 2^[3]	Extension Phase
Started	115
Completed	70
Not completed	45
Consent withdrawn by subject	15
Adverse event, non-fatal	22
NotSpecified	1
Investigator Decision	5
Lost to follow-up	1
Disease Progression	1

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects who resumed monthly open-label treatment with DAC HYP 150 mg in the extension phase of the study.

Day 141 (Week 20) at pre-dose and 8, 24, 72 and 120 hours post-dose and 7, 10, 14 and 21 days post-dose

Notes:

[12] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Data was collected for the Intensive PK sub-study only, per protocol.

Reporting groups

Reporting group title	DAC HYP 150 mg
-----------------------	----------------

Reporting group description:

DAC HYP 150 mg by SC injection using the PFS every 4 weeks for 24 weeks followed by a 20-week washout period. After completion of the washout period, participants could resume monthly DAC HYP 150 mg using the PFS for up to 3 additional years. Participants in the TP-DI sub-study received a probe-drug cocktail administration at Weeks 43 and 53. The probe-drug cocktail consisted of midazolam 5 mg, caffeine 200 mg, S-warfarin 10 mg, vitamin K 10 mg, omeprazole 40 mg, and dextromethorphan 30 mg. The oral vitamin K was used to counteract warfarin's anticoagulant effect prophylactically.

Serious adverse events	DAC HYP 150 mg		
Total subjects affected by serious adverse events			
subjects affected / exposed	33 / 133 (24.81%)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 June 2011	- The primary reason for this amendment was to increase subject monitoring for laboratory signals related to hepatic function (LFTs to be assessed monthly throughout the treatment period), and to update criteria for temporary suspension and discontinuation of study treatment for subjects who develop elevations in ALT, AST, or total bilirubin. Subjects who permanently discontinued study treatment due to elevated LFTs were to be evaluated for possible toxicological, infectious, immunological, and metabolic causes of liver injury. - Audit C Questionnaire was added to Medical History at Screening Visit. - Wording of "Interim analyses" section was revised to clarify that ongoing data review/analyses of both the main study data and Intensive PK substudy data may be performed.
16 April 2012	- Changes were made to prohibit concomitant treatment with medications that have an established association with hepatotoxicity or cutaneous hypersensitivity reactions. - Changes were made to provide monthly LFT results to the Neurologist prior to administration of study treatment. - Changes were made to provide subjects with the option of an additional 3 years of open-label treatment with DAC HYP. - The sample size was reduced from 150 to 100 subjects. - The upper limit for the age of eligibility was increased from 55 years to 65 years. - The parameters for concomitant IFN- β treatment were revised. - The criteria for subject withdrawal from the study were revised to include subjects who developed a chronic viral infection.
28 September 2012	- A TP-DI substudy as added as part of the 3-year treatment extension. - PD testing was removed at timepoints that were no longer considered informative for characterizing response to DAC HYP. - The timepoints for the tests and assessments listed in Table 1 were revised. In addition, hematology and blood chemistry testing were removed from the Unscheduled Relapse Assessment. These changes were made to minimize subject burden in the study. - The timing for the confirmatory hematology tests for discontinuation of DAC HYP was revised.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
