

Clinical trial results:

A Phase 3 clinical study to determine the pharmacokinetics, safety, and efficacy of rVWF:rFVIII and rVWF in the treatment of bleeding episodes in subjects diagnosed with von Willebrand disease

Summary

EudraCT number	2010-024108-84
Trial protocol	GB DE SE AT NL BE BG IT ES
Global end of trial date	15 February 2014

Results information

Result version number	v1
This version publication date	01 March 2016
First version publication date	07 August 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 February 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 February 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objectives of this study were:

To compare the pharmacokinetic (PK) parameters of recombinant von Willebrand Factor (rVWF) alone or concomitantly with recombinant Factor VIII (rFVIII) [rVWF:rFVIII] in subjects with type 3 von Willebrand Disease (VWD);

To examine the PK parameters of rVWF in subjects with severe VWD;

To evaluate the hemostatic efficacy, safety, and tolerability of rVWF:rFVIII and rVWF alone in subjects with VWD receiving the investigational product for the treatment of bleeding episodes (BEs);

To evaluate tolerability and safety of rVWF including the development of inhibitory and total binding anti-VWF antibodies and clinically significant changes in laboratory parameters following study product administration;

To assess changes in Health-Related Quality of Life (HRQoL)

Protection of trial subjects:

This study was conducted in accordance with the standards of Good Clinical Practice (GCP) in effect at the time of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 January 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Austria: 1
Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Bulgaria: 2
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	India: 1
Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Japan: 3
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Poland: 6

Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	Sweden: 1
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	37
EEA total number of subjects	21

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	37
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled (signed informed consent) from 30 sites in 15 countries.

Pre-assignment

Screening details:

49 subjects provided informed consent and were screened for study, of which 37 were exposed to study product. Reasons for discontinuation are provided in Pre-assignment period.

Pre-assignment period milestones

Number of subjects started	49 ^[1]
Number of subjects completed	37

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 3
Reason: Number of subjects	Physician decision: 1
Reason: Number of subjects	Screen failure: 6
Reason: Number of subjects	High doses of rFVIII for oral procedure: 1
Reason: Number of subjects	Arm for which subject eligible was closed: 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number of subjects enrolled are for subjects treated with study product (N=37) as per definition in EudraCT and the number of subjects who started pre-assignment are all subjects enrolled i.e. signed informed consent (N=49).

Period 1

Period 1 title	Overall Trial (Part A and B Combined) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Part Randomized: Subjects in Arms 1 and 2 were randomized at ratio of 1:1 to receive either recombinant von Willebrand Factor:recombinant Factor VIII (rVWF:rFVIII) or rVWF:saline (placebo) for pharmacokinetic (PK) analysis. After a washout period, subjects crossed over to receive the alternative treatment to the initial infusion for a further PK analysis.

Subject/investigator were blinded and the study product was reconstituted by an unblinded third party (preferably by the hospital pharmacist)

Arms

Are arms mutually exclusive?	No
Arm title	PK50+Treatment

Arm description:

In Part A, (pharmacokinetic [PK] assessment followed by on-demand treatment for bleeding episodes [BEs] for 6 months) subjects were initially infused either with 50 IU/kg recombinant von Willebrand Factor: von Willebrand Ristocetin cofactor (VWF:RCo rVWF) [rVWF] administered together with 38.5 IU/kg recombinant Factor VIII (rFVIII) [rVWF:rFVIII] or 50 IU/kg rVWF administered together with saline. Subjects then crossed over to the alternate infusion after washout (PK).

For on-demand treatment, subjects received study product [VWF:rFVIII or rVWF], where BEs were initially treated with rVWF:rFVIII and subsequently with rVWF with or without rFVIII, based on FVIII levels (dose based on previous FVIII levels or if not available from the individual subject's PK data at discretion of investigator).

In part, B subjects continued to receive on demand treatment for BEs with study product [VWF:rFVIII or

rVWF] for a further 6 months.

Arm type	Experimental
Investigational medicinal product name	rVWF:rFVIII
Investigational medicinal product code	BAX111 with ADVATE
Other name	vonicog alfa with ADVATE
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] co-infused with 38.5 IU/kg recombinant Factor VIII (rFVIII) at a ratio of 1.3:1±0.2 [rVWF:rFVIII] (Arms 1 and 2 -PK50 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained.

Investigational medicinal product name	rVWF
Investigational medicinal product code	BAX111
Other name	vonicog alfa
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] (Arms 1 and 2 -PK50 only), 80 IU/kg VWF:RCo rVWF [rVWF] rVWF (Arm 3 - PK80 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained

Arm title	PK50 only
------------------	-----------

Arm description:

In Part A, (pharmacokinetic [PK] assessment followed by on-demand treatment for bleeding episodes [BEs] for 6 months) subjects were initially infused either with 50 IU/kg recombinant von Willebrand Factor: von Willebrand Ristocetin cofactor (VWF:RCo rVWF) [rVWF] administered together with 38.5 IU/kg recombinant Factor VIII (rFVIII) [rVWF:rFVIII] or 50 IU/kg rVWF administered together with saline. Subjects then crossed over to the alternate infusion after washout (PK).

For on-demand treatment, subjects received study product [VWF:rFVIII or rVWF], where BEs were initially treated with rVWF:rFVIII and subsequently with rVWF with or without rFVIII, based on FVIII levels (dose based on previous FVIII levels or if not available from the individual subject's PK data at discretion of investigator).

Subjects then exited the study or could opt to sign informed consent to move to Arm 1 receive treatment for bleeding episodes with study product.

Arm type	Experimental
Investigational medicinal product name	rVWF
Investigational medicinal product code	BAX111
Other name	vonicog alfa
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] (Arms 1 and 2 -PK50 only), 80 IU/kg VWF:RCo rVWF [rVWF] rVWF (Arm 3 - PK80 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained

Investigational medicinal product name	rVWF:rFVIII
Investigational medicinal product code	BAX111 with ADVATE
Other name	vonicog alfa with ADVATE
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] co-infused with 38.5 IU/kg recombinant Factor VIII (rFVIII) at a ratio of 1.3:1±0.2 [rVWF:rFVIII] (Arms 1 and 2 -PK50 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained.

Arm title	PK80+Treatment
------------------	----------------

Arm description:

In Part A, subjects underwent pharmacokinetic (PK) assessment for 2 infusions of recombinant von Willebrand Factor (rVWF). Subjects initially underwent an initial PK assessment of an infusion of 80 IU/kg recombinant von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF]. After the first PK assessment subjects received on demand treatment for bleeding episodes (BEs) with study product [VWF:rFVIII or rVWF], where BEs were initially treated with rVWF:rFVIII and subsequently with rVWF with or without rFVIII, based on FVIII levels. If FVIII levels not available, the individual subject's PK data was used to determine rFVIII dose at discretion of investigator.

Subjects received on demand treatment for 6 months after the first study product infusion. After 6 months subjects underwent a second PK assessment of an infusion of 80 IU/kg rVWF.

In part B, subjects continued to receive on demand treatment for BEs with study product [VWF:rFVIII or rVWF] for a further 6 months.

Arm type	Experimental
Investigational medicinal product name	rVWF
Investigational medicinal product code	BAX111
Other name	vonicog alfa
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] (Arms 1 and 2 -PK50 only), 80 IU/kg VWF:RCo rVWF [rVWF] rVWF (Arm 3 - PK80 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained

Investigational medicinal product name	rVWF:rFVIII
Investigational medicinal product code	BAX111 with ADVATE
Other name	vonicog alfa with ADVATE
Pharmaceutical forms	Powder and solvent for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

50 IU/kg von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] co-infused with 38.5 IU/kg recombinant Factor VIII (rFVIII) at a ratio of 1.3:1±0.2 [rVWF:rFVIII] (Arms 1 and 2 -PK50 only). Dose and frequency of study product for on-demand treatment of bleeding episodes for Arms 1, 3 and 4 dependent on severity and location of bleed. The initial bleeding episode was to be treated with rVWF:rFVIII at a ratio of 1.3:1±0.2 with subsequent doses of rVWF alone as long as therapeutic FVIII levels were maintained.

Arm title	Treatment
------------------	-----------

Arm description:

In Part A, subjects received on demand treatment for bleeding episodes (BEs) with study product (recombinant von Willebrand Factor [rVWF] administered together with recombinant Factor VIII [rFVIII] (rVWF:rFVIII) or rVWF alone), where BEs were initially treated with rVWF:rFVIII and subsequently with rVWF with or without rFVIII, based on FVIII levels. If not available, the individual subject's PK data was used to determine rFVIII dose at discretion of investigator.

Subjects received on demand treatment for 6 months after the first study product infusion.

In part, B subjects continued to receive on demand treatment for BEs with study product [VWF:rFVIII or rVWF] for a further 6 months.

No pharmacokinetic (PK) assessments were conducted in this arm.

If not available, the individual subject's PK data was used to determine rFVIII dose at discretion of investigator.

Subjects received on demand treatment for 6 months after the first study product infusion.

In part, B subjects continued to receive on demand treatment for BEs with study product [VWF:rFVIII or rVWF] for a further 6 months.

No pharmacokinetic (PK) assessments were conducted in this arm.

Reporting group title	Safety Analysis Set
-----------------------	---------------------

Reporting group description:

The Safety Analysis Set comprises of subjects who were treated with study product (recombinant von Willebrand Factor [rVWF] with or without recombinant factor VIII [rFVIII]) at least once during the study.

Reporting group title	Full Analysis Set
-----------------------	-------------------

Reporting group description:

The Full Analysis Set comprised of subjects treated with study product (recombinant von Willebrand Factor [rVWF] with or without recombinant factor VIII [rFVIII]) for whom at least one efficacy rating

scale was available.

Reporting group title	PK50 Arms
-----------------------	-----------

Reporting group description:

The PK50 arm comprised of subjects who underwent PK analysis of study product (50 IU/kg recombinant von Willebrand Factor (rVWF) administered together with 38.5 IU/kg recombinant Factor VIII (rFVIII) [rVWF:rFVIII] or 50 IU/kg rVWF administered together with saline [rVWF]) i.e. a total subjects from Arm 1 [PK50+Treatment] and Arm 2 [PK50 only]. Subjects in this arm have received at least one PK infusion and have provided data suitable for PK analysis. Only PK data included in this arm.

Reporting group title	PK80 Arm
-----------------------	----------

Reporting group description:

The PK80 arm comprised of subjects who underwent PK analysis of study product (80 IU/kg recombinant von Willebrand Factor [rVWF]) i.e. subjects from Arm 3 [PK80+Treatment]. Subjects in this arm have received at least one PK infusion and have provided data suitable for PK analysis. Only PK data included in this arm.

Primary: Percentage of subjects with treatment success for treated bleeding episodes

End point title	Percentage of subjects with treatment success for treated bleeding episodes ^{[1][2]}
-----------------	---

End point description:

Treatment success was defined as the extent of control of bleeding episodes (BEs) using a mean efficacy rating score of <2.5 for a subject's BEs treated with study product (recombinant von Willebrand Factor [rVWF] with or without recombinant factor VIII [rFVIII]) during the study period.

Scores used:

Excellent = 1 - actual infusions ≤ estimated number of infusions required to treat BE; no additional VWF required (all BEs);

Good = 2 - >1-2 infusions (minor/moderate BEs) or <1.5 infusions (major BEs) greater than estimated required to control BE; no additional VWF required (all BEs);

Moderate = 3 ≥ 3 infusions (minor/moderate BEs) or ≥ 1.5 infusions (major BEs) greater than estimated required to control BE; no additional VWF required (all BEs);

None = 4 - severe uncontrolled bleeding or intensity of bleeding not changed; additional VWF required.

There are 18 subjects with available primary efficacy rating (excluding gastrointestinal bleeds) in the Full Analysis Set.

End point type	Primary
----------------	---------

End point timeframe:

for 12 months after first infusion of rVWF:rFVIII or rVWF

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, descriptive statistics were collected for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Statistics for the primary endpoint were based on Treatment Success of Bleeding Episodes for all subjects in the Full Analysis Set which was for one comparison group, whereas statistics in EudraCT require two comparison groups, so unable to supply statistical analysis for this endpoint.

End point values	Full Analysis Set			
Subject group type	Reporting group			
Number of subjects analysed	18			
Units: Percent of subjects				
number (confidence interval 90%)	100 (84.7 to 100)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of treated bleeding episodes treated with an efficacy rating of "excellent" or "good"

End point title	Percentage of treated bleeding episodes treated with an efficacy rating of "excellent" or "good" ^[3]
-----------------	---

End point description:

Efficacy ratings "excellent" or "good" for the control of bleeding episodes (BEs) with study product (recombinant von Willebrand Factor [rVWF] with or without recombinant factor VIII [rFVIII]) are defined as follows:

Excellent - actual infusions \leq estimated number of infusions required to treat BE; no additional von Willebrand Factor (VWF) required (all BEs);

Good - >1 -2 infusions (minor/moderate BEs) or <1.5 infusions (major BEs) greater than estimated required to control BE; no additional VWF required (all BEs).

Out of 193 BEs treated with study product, the number of infusions required was estimated prospectively for 130 BEs with an available efficacy rating from subjects in the Full Analysis Set.

Note that use of a VWF concentrate other than study product was permissible under certain circumstances, but subjects were excluded from efficacy analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

for 12 months after first infusion of rVWF:rFVIII or rVWF

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, descriptive statistics were collected for this endpoint.

End point values	Full Analysis Set

Secondary: PK80 - Volume of Distribution at Steady State of VWF:CB

End point title	PK80 - Volume of Distribution at Steady State of VWF:CB ^[65]
-----------------	---

End point description:

Volume of Distribution at Steady State (Vss) of von Willebrand Factor Collagen Binding (VWF:CB) after infusion of 80 IU/kg recombinant von Willebrand Factor: von Willebrand Factor Ristocetin cofactor (VWF:RCo rVWF) [rVWF] for subjects in the PK80 arm (subjects from Arm 3 with PK80 data only).

PK assessment conducted at first infusion of 80 IU/kg rVWF [PK1] and the second infusion of 80 IU/kg rVWF after subjects were treated on demand for bleeding episodes for at least 6 months since their first infusion of study product [PK2].

Category title includes number of subjects [N] who provided data for the category.

End point type	Secondary
----------------	-----------

End point timeframe:

PK evaluations at pre-infusion, then at 15, 30 and 60 mins, and 3, 6, 12, 24, 30, 48, 72 and 96 hrs post-infusion.

PK evaluation timeframe for 28 ± 3 days after first infusion of study product which includes PK evaluation for both infusions and washout.

Notes:

[65] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Per protocol, descriptive statistics were collected for this endpoint.

End point values	PK80 Arm			
Subject group type	Reporting group			
Number of subjects analysed	15			
Units: dL/kg				
median (confidence interval 95%)				
PK1 of rVWF [N=15]	0.39 (0.34 to 0.46)			
PK2 of rVWF [N=13]	0.36 (0.33 to 0.4)

Reporting groups

Reporting group title	Safety Analysis Set
-----------------------	---------------------

Reporting group description:

The Safety Analysis Set comprises of subjects who were treated with study product at least once during the study.

Serious adverse events	Safety Analysis Set		
Total subjects affected by serious adverse events			
subjects affected / exposed	7 / 37 (18.92%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Pregnancy, puerperium and perinatal conditions			
Abortion spontaneous			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
General disorders and administration site conditions			
Chest discomfort			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal disorders			
Constipation			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal haemorrhage			

subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Haemorrhoids			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Mesenteric haematoma			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Reproductive system and breast disorders			
Uterine polyp			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			
Heart rate increased			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Osteomyelitis			
subjects affected / exposed	1 / 37 (2.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Safety Analysis Set		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	10 / 37 (27.03%)		
Injury, poisoning and procedural complications			

Contusion subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Laceration subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Nervous system disorders Headache subjects affected / exposed occurrences (all)	4 / 37 (10.81%) 4		
Blood and lymphatic system disorders Iron deficiency anaemia subjects affected / exposed occurrences (all)	3 / 37 (8.11%) 3		
Anaemia subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
General disorders and administration site conditions Infusion site paraesthesia subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Ear and labyrinth disorders Vertigo subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Gastrointestinal disorders Vomiting subjects affected / exposed occurrences (all)	3 / 37 (8.11%) 3		
Nausea subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	3 / 37 (8.11%) 3		
Back pain			

subjects affected / exposed occurrences (all)	2 / 37 (5.41%) 2		
Infections and infestations Upper respiratory tract infection subjects affected / exposed occurrences (all)	3 / 37 (8.11%) 3		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 November 2011	Exclusion criteria updated to ensure specific cohort of patients plus hypersensitivity of study product components. New study arm added (PK80 analysis). Update for safety stopping rules.
10 August 2012	Clarification on procedure for enabling home treatment of bleeding episodes. Inclusion criteria updated to better reflect real life clinical practice for this cohort of patients. Option to use premixed or sequential infusion of study product (when administered together with recombinant Factor VIII).
26 July 2013	Final report to be done after completion of study Parts A and B.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
