

Clinical trial results:

A randomized, double-blind, double-dummy, active controlled study of ACZ885 (canakinumab) on the treatment and prevention of gout flares in patients with frequent flares, for whom NSAIDs and/or colchicine are contraindicated, not tolerated or ineffective

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 May 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 May 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1) To confirm that canakinumab 150 mg s.c. is superior to triamcinolone acetonide 40 mg i.m. with respect to patient's assessment of gout pain intensity in the most affected joint at 72 hours postdose (on a 0-100mm visual analog scale [VAS])

2) To confirm that canakinumab 150 mg s.c. is superior to triamcinolone acetonide 40 mg i.m. with respect to the time to the first new gout flare in observation period of 12 weeks

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 July 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 4
Country: Number of subjects enrolled	China: 114
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Singapore: 8
Worldwide total number of subjects	136
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	124
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 136 patients were randomized to treatment, 67 to canakinumab 150 mg s.c. and 69 to triamcinolone acetonide 40 mg i.m.

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	ACZ885 150 mg

Arm description:

Patients were treated with canakinumab 150 mg s.c and matching placebo for triamcinolone acetonide i.m.

Arm type	Experimental
Investigational medicinal product name	canakinumab
Investigational medicinal product code	ACZ885
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

150 mg S C

Arm title	Triamcinolone acetonide 40 mg
------------------	-------------------------------

Arm description:

triamcinolone acetonide 40 mg i.m. and matching placebo for canakinumab s.c.

Arm type	Active comparator
Investigational medicinal product name	Triamcinolone acetonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

40 mg SC

Number of subjects in period 1	ACZ885 150 mg	Triamcinolone acetonide 40 mg
Started	67	69
Completed	63	61
Not completed	4	8
Consent withdrawn by subject	1	2
Adverse event, non-fatal	-	2
Lost to follow-up	3	1
Protocol deviation	-	1
Lack of efficacy	-	2

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse events are reported in this record from First Patient First Treatment until Last Patient Last Visit.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18

subjects affected / exposed	0 / 67 (0.00%)	4 / 69 (5.80%)	
occurrences (all)	0	4	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 April 2011	This amendment (Amendment 1, issued on 13-Apr-2011, before study start) rendered pre-screening for HIV, Hepatitis, TB and diabetes as mandatory in order to verify exclusion criteria prior to randomization and minimize the risk of protocol deviations

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated early for strategic reasons, not concerns for efficacy or safety of canakinumab.
Due to EudraCT system limitations, data using 999 as data points in this record are not an accurate representation of clinical trial results.

Notes:
