Analysis stage	Final	
Date of interim/final analysis	02 October 2015	
Is this the analysis of the primary completion data?	No	
Global end of trial reached?	Yes	
Global end of trial date	02 October 2015	
Was the trial ended prematurely?	No	

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the long-term safety and tolerability of BIIB017 in subjects originally treated in Study 105MS301 who continued BIIB017 treatment. The secondary objective of this study was to describe the long-term MS outcomes in subjects originally treated in Study 105MS301 who continued BIIB017 treatment.

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -	
Actual start date of recruitment	15 April 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1077
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study 105MS302 (NCT01332019) is an extension study and includes participants previously randomized to Study 105MS301 (NCT00906399). Only participants in Study 105MS301 who completed the study treatment and visit schedule through Week 96 were eligible for entry into this study.

Pre-assignment

Screening details:

Participants continued BIIB017 at the same dosage regimen they were following during treatment year 2 of Study 105MS301: BIIB017 125 μ g subcutaneously (SC) every 2 weeks (Q2W) or every 4 weeks (Q4W). A major change in study design was introduced in Amendment 3 of the protocol, which switched all ongoing subjects dosing Q4W to dosing Q2W.

Pre-assignment period milestones

Number of subjects started	1077
Number of subjects completed	1076

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Subject was not dosed: 1
----------------------------	--------------------------

Period 1	
Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled

Allocation method	Non-randomised - controlled	
Blinding used	Double blind	
Roles blinded	Subject, Investigator	

Blinding implementation details:

Dose frequency (Q2W or Q4W) was blinded in this study, and the study was also rater-blinded (separate study personnel were assigned to conduct efficacy assessments and treat subjects) to protect against perceived dose-frequency unblinding of subjects' treatment assignments. When Amendment 3 took effect, the study became open-label although the dose frequency was not unblinded.

Arms

Are arms mutually exclusive?	Yes
Arm title	BIIB017 Q4W

Arm description:

125 µg BIIB017 administered by SC injection Q4W for at least 2 years and up to 4 years.

Arm type	Experimental
Investigational medicinal product name	PEGylated Interferon Beta-1a
Investigational medicinal product code	BIIB017
Other name	Plegridy, PEG IFN β-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study treatment was administered by SC self-injection into the skin. Subjects could inject study treatment into the thigh, abdomen, or arms.

Arm title	BIIB017 Q2W
Arm description:	

Arm description:

 $125\;\mu g$ BIIB017 administered by SC injection Q2W for at least 2 years and up to 4 years.

Arm type	Experimental
----------	--------------

EU-CTR publication date: 29 January 2017

Investigational medicinal product name	PEGylated Interferon Beta-1a
Investigational medicinal product code	BIIB017
Other name	Plegridy, PEG IFN β-1a
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study treatment was administered by SC self-injection into the skin. Subjects could inject study treatment into the thigh, abdomen, or arms.

Number of subjects in period 1[1]	BIIB017 Q4W	BIIB017 Q2W
		1
Started	529	547
Completed	417	425
Not completed	112	122
Adverse event, serious fatal	2	1
Physician decision	4	3
Consent withdrawn by subject	73	71
Adverse event, non-fatal	13	22
NotSpecified	16	18
Lost to follow-up	4	7

Notes:

Justification: As shown in the "pre-assignment period milestones," 1077 subjects started in this study and 1 subject was not dosed.

^{[1] -} The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

AE: any untoward medical occurrence that did not necessarily have a causal relationship with study treatment. SAE: any untoward medical occurrence that at any dose: resulted in death; in the view of the Investigator, placed the subject at immediate risk of death; required inpatient hospitalization or prolongation of existing hospitalization; resulted in persistent or significant disability/incapacity; resulted in a congenital anomaly/birth defect; any other medically important event that, in the opinion of the Investigator, could have jeopardized the subject or may have required intervention to prevent 1 of the other outcomes listed in the definition above. Data collected after Amendment 3 took effect were excluded for subjects enrolled into study 105MS302 on every 4 week dosing, but not excluded for subjects enrolled on every 2 week dosing. For subjects who switched to alternative MS medications, data after switch and 14 days after last dose of study treatment are excluded.

	-
End point title	Change from Baseline in Multiple Sclerosis Impact Scale
	(MSIS)-29 Physical Score

End point description:

The 29-item MSIS-29 is a disease-specific participant-reported outcome measure that has been developed and validated to examine the physical and psychological impact of MS from a patient's perspective; it measures 20 physical items and 9 psychological items. Responses use a 5-point Likert scale range from 1 to 5. All questions are to be answered. The physical well being assessment portion of the MSIS-29 consists of 20 questions in which subjects rate the impact of MS on their day-to-day life during the past two weeks from 1=no impact to 5=extreme impact for a total score of 20-100. A lower total score indicates less physically-related impact while a higher total score indicates greater physically-related impact on a participant's functioning. Observed data after subjects switched to alternative MS medications or after Amendment 3 took effect are excluded.

Secondary: Change form Baseline in Euro Quality of Life (EQ-5D) Index Score				
	Change form Baseline in Euro Quality of Life (EQ-5D) Index Score			

End point description:

The EQ-5D is a participant-answered questionnaire scoring 5 dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. Scores of 1, 2, or 3 are possible responses for each of 5 questions (1=no problems, 2=some problems, 3=severe problems). A scoring formula developed by the EuroQol Group is then used to assign utility values for each participant's Health State Profile. A summary index score (EQ-5D index score) is derived from the 5 questions by conversion with this scoring formula and a table of scores. EQ-5D Summary Index values ranged from -0.6 (worst health state) to 1.00 (perfect health state). Observed data after participants switched to alternative MS medications or after Amendment 3 took effect are excluded.
