

Clinical trial results:

A randomized phase II study to explore the efficacy and feasibility of upfront bi-monthly rotations between Everolimus and Pazopanib with sequential treatment of first line Pazopanib and second line Everolimus until progression in patients with advanced or metastatic clear cell renal cancer.

Summary

EudraCT number	2011-000127-32
Trial protocol	NL
Global end of trial date	05 April 2016

Results information

Result version number	v1 (current)
This version publication date	15 June 2022
First version publication date	15 June 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 March 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 March 2016
Global end of trial reached?	Yes
Global end of trial date	05 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to assess the progression-free survival of patients who receive bi-monthly rotations of Pazopanib and Everolimus versus patients who receive Pazopanib as a first line treatment.

Protection of trial subjects:

NA

Background therapy:

NA

Evidence for comparator:

COMPARZ trial

Actual start date of recruitment	15 July 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 101
Worldwide total number of subjects	101
EEA total number of subjects	101

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	60
From 65 to 84 years	41

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Within time limits, between September 2012 and April 2014

Pre-assignment

Screening details:

NA

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

NA

Arms

Are arms mutually exclusive?	Yes
Arm title	Experimental

Arm description:

Experimental: rotating treatment

Arm type	Experimental
Investigational medicinal product name	pazopanib
Investigational medicinal product code	
Other name	Votrient
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

800mg 1dd 8 weeks (rotating)

Investigational medicinal product name	everolimus
Investigational medicinal product code	
Other name	afinitor
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

10 mg QD, 8 weeks, rotating

Arm title	Comparator
------------------	------------

Arm description:

pazopanib until PD, then everolimus

Arm type	Active comparator
Investigational medicinal product name	pazopanib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

800mg QD until PD

Investigational medicinal product name	Everolimus
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

10 mg QD, until PD

Number of subjects in period 1	Experimental	Comparator
Started	52	49
Completed	52	49

Statistical analyses

Statistical analysis title	Statistical Methods
Statistical analysis description:	
A total sample size of 100 patients was planned. From literature it was estimated that the 1-year PFS1 in the control arm would be 50%. An increase from 50% to 80% 1-year PFS of the rotating schedule over standard of care with first-line VEGFR-TKI was considered to be clinically relevant. Primary analysis was planned when over 60 events (first progression or death) were recorded, enabling detection of an increase in 1-year PFS to 80% (power 90%, $\alpha=.05$, 2-tailed test).	
Comparison groups	Experimental v Comparator
Number of subjects included in analysis	101
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.05
Method	Regression, Cox
Parameter estimate	Median difference (final values)
Point estimate	50

Confidence interval	
level	95 %
sides	2-sided
lower limit	50
upper limit	80
Variability estimate	Standard deviation
Dispersion value	0

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Time between first drug dose and 30 days after EOT

Adverse event reporting additional description:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Not all required data are available and/or impossible to enter in this overview. PLEASE REFER TO FULL PAPER IN JAMA ONCOLOGY OR ATTACHED STATISTICAL REPORT FOR VALIDATED DATA
