

Clinical trial results:

A phase II study of oral Panobinostat in adult patients with relapsed/refractory diffuse large B-cell lymphoma after high-dose chemotherapy with autologous stem cell transfusion (ASCT) or in adult patients who are not eligible for ASCT

Summary

EudraCT number	2011-000175-13
Trial protocol	IT
Global end of trial date	03 April 2017

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 February 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 January 2014
Global end of trial reached?	Yes
Global end of trial date	03 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To explore the antitumor activity of panobinostat in term of overall response (OR) at the end of the induction phase (i.e. month 6 from the beginning of panobinostat)

Protection of trial subjects:

For patients who are unable to tolerate the protocol-specified dosing schedule, dose adjustments are permitted in order to keep the patient on study drug. These dose adjustments comprise delays in dosing and/or reductions in the dose being administered. Dosing should always be temporarily discontinued if the physician determines it is in the best interest of the patient. All dose modifications must be recorded on the Dosage Administration Record form.

The dose of panobinostat may be modified for a patient during any cycle. The first dose adjustment consists in the modification of panobinostat administration from three times every week (QW) to three times every other week (QOW). Subsequent dose adjustments consist in panobinostat dose reductions. Dosages lower than 30 mg three times QOW are not permitted. When and if it is determined that a patient would require a dose below 30 mg QOW, the patient should be discontinued from study treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 June 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 35
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	24
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Thirtyfive patients recruited in Italy from 14th June 2011, with date of last completed at 3rd April 2017.

Pre-assignment

Screening details:

Adult patients with R/R DLBCL who previously received at least two lines of treatments including ASCT consolidation or patients with PD after a single first line R-CHOP if not eligible for ASCT because of age or co-morbidities.

All patients must satisfy all the inclusion criteria and none of exclusion criteria.

Period 1

Period 1 title	Baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Single arm
-----------	------------

Arm description:

Patients will receive panobinostat. The treatment is divided in three phases: induction phase (course 1 to 6), consolidation phase (courses 7 to 12), maintenance phase (from course 13 until the end of therapy for any reason). The duration of a treatment course will be 28 days.

The first dose of panobinostat in course 1 defines day 1 of the treatment cycle, and each cycle thereafter will begin 28 days later.

Arm type	Single arm study
Investigational medicinal product name	Panobinostat
Investigational medicinal product code	
Other name	LBH589
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Panobinostat should be taken p.o. at the dose of 40mg/day three-times every week (QW),as part of 28 days treatment cycle.

Induction phase

Patients will receive panobinostat for 6 courses.Response assessment will be performed every 2 courses until the end of the induction phase.Patients with responsive (CR/PR) or stable disease during each assessment will complete the induction phase.

Consolidation phase

Response assessment will be performed every 3 courses until course 12.Patients with responsive or stable disease will continue with maintenance.

Maintenance phase

Patients will continue therapy until disease progression, intolerability, withdrawal of consent and/or if the investigator determines that further therapy is not in the patient's best interest. Response assessment will be performed every three courses until course 36.For patients still in therapy after course 36,the subsequents response assessments will be performed according to each institutional policy.
