

Clinical trial results:

A randomised, open-label, phase III study to evaluate the efficacy and safety of oral afatinib (BIBW 2992) versus intravenous methotrexate in patients with recurrent and/or metastatic head and neck squamous cell carcinoma who have progressed after platinum-based therapy

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 January 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 March 2014
Global end of trial reached?	Yes
Global end of trial date	06 December 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the efficacy and safety of afatinib versus methotrexate therapy in patients with recurrent and/or metastatic (R/M) head and neck squamous cell carcinoma (HNSCC) who have progressed during or after platinum-based therapy given for R/M HNSCC.

Protection of trial subjects:

Regular and frequent assessments of clinical benefit throughout the trial ensured that patients not deriving clinical benefit were withdrawn from study medication. Furthermore, an independent data monitoring committee (DMC) evaluated the safety of patients on an ongoing basis.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 46
Country: Number of subjects enrolled	Japan: 49
Country: Number of subjects enrolled	Austria: 16
Country: Number of subjects enrolled	Belgium: 38
Country: Number of subjects enrolled	Czechia: 12
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 131
Country: Number of subjects enrolled	Germany: 76
Country: Number of subjects enrolled	Greece: 15
Country: Number of subjects enrolled	Italy: 63
Country: Number of subjects enrolled	Russian Federation: 37
Country: Number of subjects enrolled	Spain: 46
Country: Number of subjects enrolled	Sweden: 2
Country: Number of subjects enrolled	Switzerland: 4

Country: Number of subjects enrolled	South Africa: 8

Worldwide total number of subjects	593
EEA total number of subjects	401

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	428
From 65 to 84 years	162
85 years and over	3

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The screening visit was to be performed within 14 days prior to the first administration of study medication. Eligible patients were to be randomised and treatment was to be started within 4 calendar days after randomisation.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Randomised, multicenter, open-label, active-control study with 2 parallel arms.

Arms

Are arms mutually exclusive?	Yes
Arm title	Afatinib (BIBW 2992)

Arm description:

Oral administration of Afatinib (film-coated tablets). Starting dose 40 milligram (mg) once daily; escalation to 50 mg/day and / or dose reduction to 40 mg/day (if applicable), 30 mg/day, or 20 mg/day (according to the protocol-defined dose escalation and dose reduction scheme) if required. No dose increase was allowed after a dose reduction.

Arm type	Experimental
Investigational medicinal product name	Afatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Starting dose 40 mg once daily; escalation to 50 mg/day and / or dose reduction to 40 mg/day (if applicable), 30 mg/day, or 20 mg/day (according to the protocol-defined dose escalation and dose reduction scheme) if required. No dose increase was allowed after a dose reduction.

Arm title	Methotrexate
------------------	--------------

Arm description:

Intravenous bolus injection of Methotrexate Starting dose 40 milligram per square meter mg/m² weekly; escalation to 50 mg/m² and / or dose reduction to 40 mg/m² (if applicable), 30 mg/m², and 20 mg/m² (according to the protocol-defined dose escalation and dose reduction scheme) if required. No dose increase was allowed after a dose reduction.

Arm type	Active comparator
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

Starting dose 40 mg/m² weekly; escalation to 50 mg/m² and / or dose reduction to 40 mg/m² (if applicable), 30 mg/m², and 20 mg/m² (according to the protocol-defined dose escalation and dose reduction scheme) if required.

No dose increase was allowed after a dose reduction.

Number of subjects in period 1^[1]	Afatinib (BIBW 2992)	Methotrexate
Started	322	161
Completed	0	0
Not completed	322	161
Adverse event, serious fatal	29	19
Reason other than those specified above	4	3
Adverse event, non-fatal	22	22
Non-compliance with protocol	-	1
Refused to continue trial medication	16	9
Lost to follow-up	-	1
Worsening of underlying cancer disease	23	12
Progressive disease per RECIST	226	93
Not treated	2	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

Primary: Progression-free survival (PFS) based on central independent review

End point title	Progression-free survival (PFS) based on central independent review
End point description: PFS was defined as the time from the date of randomisation to disease progression or death, whichever occurred first. The primary analysis of PFS considered PFS events as assessed by central independent review, including all data collected until the study completion (06 December 2016). The date of disease progression was recorded based on RECIST version 1.1. Unequivocal progression of disease was determined if at least one of the following criteria applied: - At least 20% increase in the SoD of target lesions taking as reference the smallest SoD recorded since the treatment started, together with an absolute increase in the SoD of at least 5 mm - Appearance of one or more new lesions - Unequivocal progression of existing non-target lesions. The randomised set (RS) included all patients who were randomised to receive treatment, whether treated or not.	
End point type	Primary
End point timeframe: From randomization until disease progression, death or study completion date (06Dec2016); Up to 60 months	

End point values	Afatinib (BIBW 2992)	Methotrexate

lower limit	0.786
upper limit	1.169

Notes:

[6] - Log-rank test stratified by baseline ECOG PS (0 or 1) and prior use of EGFR-targeted antibody in the R/M setting (Yes or No).

Secondary: Objective Response (OR)

End point title	Objective Response (OR)
-----------------	-------------------------

End point description:

OR is defined as the best overall response of complete response (CR) and partial response (PR) according to RECIST version 1.1, CR for target lesions (TL): Disappearance of all target lesions. CR for non-target lesions (NTL): Disappearance of all non-target lesions. All lymph nodes must be non-pathological in size (<10mm short axis). PR for TL: At least a 30% decrease in the sum of diameters of target lesions taking as reference the baseline sum diameters. Other factors which add to the overall response of an imaging timepoint as PR are as below:-

- CR in TL, but non-CR/Non-PD in NTL leads to PR
- CR in TL, but not evaluated NTL leads to PR
- PR in TL, but non-PD NTL or not all evaluated NTL leads to PR;

All the above scenarios should also satisfy 'No occurrence of new lesions'.

End point type	Secondary
----------------	-----------

End point timeframe:

Tumour imaging was to be performed every 6 weeks during the first 24 weeks of treatment, and hereafter every 8 weeks (data cut-off 07May2014); Up to 28 months

End point values	Afatinib (BIBW 2992)	Methotrexate

Reporting groups

Reporting group title	Afatinib (BIBW 2992)
-----------------------	----------------------

Reporting group description:

Oral administration of Afatinib (film-coated tablets). Starting dose 40 mg once daily; escalation to 50 mg/day and / or dose reduction to 40 mg/day (if applicable), 30 mg/day, or 20 mg/day (according to the protocol-defined dose escalation and dose reduction scheme) if required. No dose increase was allowed after a dose reduction.

Reporting group title	Methotrexate
-----------------------	--------------

Reporting group description:

Intravenous bolus injection of Methotrexate Starting dose 40 mg/m² weekly; escalation to 50 mg/m² and / or dose reduction to 40 mg/m² (if applicable), 30 mg/m², and 20 mg/m² (according to the protocol-defined dose escalation and dose reduction scheme) if required. No dose increase was allowed after a dose reduction.

occurrences (all)	22	4	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 October 2011	<ul style="list-style-type: none">-A conversion factor was introduced in order to check the total sum of platinum dose administered for patients who were switched from cisplatin to carboplatin (or vice versa) in the first-line R/M setting.-The exclusion criterion on patients with known HIV, active hepatitis B and/or hepatitis C infection was expanded by "other known severe infections, including but not limited to tuberculosis, as judged by the investigator"-The exclusion criteria regarding the use of adequate contraception was changed from 'three months after end of treatment' to 'six months after end of treatment', in order to follow the most stringent criteria regarding pregnancy after end of treatment.-The criterion for methotrexate dose continuation and escalation was changed to 'mucositis common terminology criteria for adverse events (CTCAE) grade ≤ 1' and for methotrexate dose reduction to 'mucositis CTCAE grade > 1'.
23 July 2012	<ul style="list-style-type: none">- For the inclusion criteria, it was clarified that platinum based therapy can be a combination therapy.- The handling of patients that were screened but the screening images did not show progression according to Response Evaluation Criteria in Solid Tumours (RECIST) after platinum based therapy was clarified.
15 April 2014	Amendment 3 to the clinical trial protocol only involved logistical and administrative aspects of the trial.
25 March 2015	<ul style="list-style-type: none">- The option to continue treatment beyond disease progression was removed because only a small fraction of the patients continued randomised treatment beyond disease progression- Visit frequency during the treatment period was reduced from weekly visits to visits every 4 weeks.- With the implementation of the amendment, tumour assessment frequency was to be according to site local standard, but not less frequently than every 16 weeks.- With the implementation of the amendment, the trial was to be considered completed after all patients had progressed and/or permanently ended study medication and the required number of death events had occurred.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
