#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 August 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This randomized, multicenter, 2-arm, open-label study (TH3RESA) evaluated the efficacy and safety of trastuzumab emtansine (T-DM1) in comparison with treatment of the physician's choice in subjects with metastatic or unresectable locally advanced/recurrent human epidermal growth factor receptor 2 (HER2)-positive breast cancer. Eligible subjects were randomized to receive either trastuzumab emtansine 3.6 mg/kg intravenously every 21 days or treatment of the physician's choice. Subjects continued to receive study treatment until disease progression or occurrence of unacceptable toxicity. This study is also known under Roche study protocol number BO25734.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 September 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 2
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	Spain: 37
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	United Kingdom: 29
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Czech Republic: 13
Country: Number of subjects enrolled	France: 80
Country: Number of subjects enrolled	Germany: 22
Country: Number of subjects enrolled	Hungary: 20
Country: Number of subjects enrolled	Italy: 56
Country: Number of subjects enrolled	United States: 147
Country: Number of subjects enrolled	Switzerland: 6
Country: Number of subjects enrolled	Australia: 19
Country: Number of subjects enrolled	Brazil: 14
Country: Number of subjects enrolled	Canada: 16
Country: Number of subjects enrolled	India: 5

Country: Number of subjects enrolled	Israel: 26
Country: Number of subjects enrolled	Korea, Republic of: 52
Country: Number of subjects enrolled	Russian Federation: 5
Country: Number of subjects enrolled	Thailand: 15
Worldwide total number of subjects	602
EEA total number of subjects	297

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	509
From 65 to 84 years	91
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 602 patients were randomized to the study (404 to receive Trastuzumab Emtansine and 198 to receive Treatment of Physician's Choice).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Trastuzumab Emtansine

Arm description:

Trastuzumab emtansine 3.6 mg/kg intravenously every 3 weeks until disease progression (as assessed by the investigator) or unmanageable toxicity.

Arm type	Experimental
Investigational medicinal product name	Trastuzumab emtansine
Investigational medicinal product code	
Other name	Kadcyla, T-DM1
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The dose was calculated based on the subject's Baseline weight on Day 1 of each 3-week treatment cycle. The same dose was administered in subsequent cycles if the subject's weight stayed within 10% of the Baseline weight. If there was a weight change > 10%, the dose was adjusted accordingly and the recorded weight became the new Baseline weight. Trastuzumab emtansine was provided as a single-use lyophilized formulation.

<b>Arm title</b>	Treatment of Physician's Choice
------------------	---------------------------------

Arm description:

Treatment of physician's choice until disease progression (as assessed by the investigator) or unmanageable toxicity. The treatments included single-agent chemotherapy, single-agent or dual-agent hormonal therapy for hormone receptor positive-disease, and human epidermal growth factor receptor 2 (HER2)-directed therapy.

Arm type	Active comparator
Investigational medicinal product name	Treatment of physician's choice
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, Solution for infusion, Tablet
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

The treatment of physician's choice (TPC) was a protocol-specified approved or standard of care therapy or combination of therapies, based on frequently used regimens for late-line HER2-positive metastatic breast cancer treatment after receipt of both trastuzumab- and lapatinib-containing regimens. The therapies included single-agent chemotherapy, single-agent (eg, tamoxifen or aromatase inhibitor) or dual-agent (e.g., aromatase inhibitor with luteinizing hormone releasing hormone [LHRH] agonist) hormonal therapy for hormone receptor positive-disease, and HER2-directed therapy. Subjects who had documented progressive disease (PD) were eligible to switch treatment to receive trastuzumab emtansine 3.6 mg/kg. Subjects who switched treatment remained on trastuzumab emtansine treatment until another PD event or unmanageable toxicity. The formulation, storage, and preparation of all TPC were as per the appropriate package insert or national prescribing information.

<b>Number of subjects in period 1</b>	<b>Trastuzumab Emtansine</b>	<b>Treatment of Physician's Choice</b>
Started	404	198
Switched to Trastuzumab Emtansine	0	94
Completed	0	0
Not completed	404	198
Physician decision	4	4
Study completed by Sponsor	103	34
Death	247	122
Non-compliance	3	1
Lost to follow-up	14	4
Reason not specified	-	1
Withdrawal by subject	33	32

## Baseline characteristics

### Reporting groups

Reporting group title	Trastuzumab Emtansine
-----------------------	-----------------------

Reporting group description:

Trastuzumab emtansine 3.6 mg/kg intravenously every 3 weeks until disease progression (as assessed by the investigator) or unmanageable toxicity.

Reporting group title	Treatment of Physician's Choice
-----------------------	---------------------------------

Reporting group description:

Treatment of physician's choice until disease progression (as assessed by the investigator) or unmanageable toxicity. The treatments included single-agent chemotherapy, single-agent or dual-agent hormonal therapy for hormone receptor positive-disease, and human epidermal growth factor receptor 2 (HER2)-directed therapy.

Reporting group values	Trastuzumab Emtansine	Treatment of Physician's Choice	Total
Number of subjects	404	198	602
Age categorical Units: Subjects			

Age continuous Units: years arithmetic mean standard deviation	53.3 ± 10.4	54.3 ± 10.8	-
Gender categorical Units: Subjects			
Female	401	197	598
Male	3	1	4

## End points

### End points reporting groups

Reporting group title	Trastuzumab Emtansine
Reporting group description: Trastuzumab emtansine 3.6 mg/kg intravenously every 3 weeks until disease progression (as assessed by the investigator) or unmanageable toxicity.	
Reporting group title	Treatment of Physician's Choice
Reporting group description: Treatment of physician's choice until disease progression (as assessed by the investigator) or unmanageable toxicity. The treatments included single-agent chemotherapy, single-agent or dual-agent hormonal therapy for hormone receptor positive-disease, and human epidermal growth factor receptor 2 (HER2)-directed therapy.	

### Primary: Progression-free Survival

End point title	Progression-free Survival
End point description: Progression-free survival was defined as the time from randomization to the first documented disease progression by investigator assessment using Response Evaluation Criteria In Solid Tumors (RECIST) v1.1 or death from any cause, whichever occurred first. Progression-free survival was a co-primary endpoint.  Randomized population: All subjects who were randomized to the study. Subjects were included in the treatment group to which they were randomized.	
End point type	Primary
End point timeframe: Baseline to the clinical cut-off date of 11 Feb 2013 (up to 2 years)	

End point values	Trastuzumab Emtansine	Treatment of Physician's Choice		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	404	198		
Units: Months				
median (confidence interval 95%)	6.2 (5.59 to 6.87)	3.3 (2.89 to 4.14)		

### Statistical analyses

Statistical analysis title	Stratified analysis
Statistical analysis description: The analysis was stratified for 1) World region (United States, Western Europe, or Other); 2) Number of prior regimens, excluding single-agent hormones, for treatment of metastatic or unresectable locally advanced/recurrent disease ( $\leq 3$ or $> 3$ ); and 3) Presence of visceral disease (any visceral disease vs no visceral disease).  The hazard ratio was estimated by Cox regression.	
Comparison groups	Trastuzumab Emtansine v Treatment of Physician's Choice

Number of subjects included in analysis	602
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.0001 <sup>[1]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.528
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.422
upper limit	0.661

Notes:

[1] - The two-sided stratified log-rank test was used to compare progression-free survival between the two treatment arms at the overall two-sided significance level of 0.5%.

### Primary: Overall Survival

End point title	Overall Survival
-----------------	------------------

End point description:

Overall survival was defined as the time from randomization to death from any cause. Overall survival was a co-primary endpoint.

Randomized population: All subjects who were randomized to the study. Subjects were included in the treatment group to which they were randomized.

999 = The median and/or the upper limit of the confidence interval could not be estimated due to too few events.

End point type	Primary
----------------	---------

End point timeframe:

Baseline to the clinical cut-off date of 11 Feb 2013 (up to 2 years)

End point values	Trastuzumab Emtansine	Treatment of Physician's Choice		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	404	198		
Units: Months				
median (confidence interval 95%)	999 (13.14 to 999)	14.9 (11.27 to 999)		

### Statistical analyses

Statistical analysis title	Stratified analysis
----------------------------	---------------------

Statistical analysis description:

The analysis was stratified for 1) World region (United States, Western Europe, or Other); 2) Number of prior regimens, excluding single-agent hormones, for treatment of metastatic or unresectable locally advanced/recurrent disease ( $\leq 3$  or  $> 3$ ); and 3) Presence of visceral disease (any visceral disease vs no visceral disease).

The hazard ratio was estimated by Cox regression.

Comparison groups	Trastuzumab Emtansine v Treatment of Physician's Choice
Number of subjects included in analysis	602
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0034 [2]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.552
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.369
upper limit	0.826

Notes:

[2] - The 2-sided stratified log-rank test was used at the overall two-sided significance level of 4.5%. The pre-specified O'Brien-Fleming stopping boundary for this first OS interim analysis was HR<0.363 (p-value < 0.0000013).

## Secondary: Percentage of Subjects With an Objective Response

End point title	Percentage of Subjects With an Objective Response
-----------------	---

End point description:

An objective response was defined as a complete or partial response determined on 2 consecutive occasions  $\geq 4$  weeks apart using Response Evaluation Criteria in Solid Tumors (RECIST) v1.1. Complete response was defined as the disappearance of all target and non-target lesions. Any pathological lymph nodes (whether target or non-target) must be  $< 10$  mm on the short axis. Partial response was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum. Participants who had no post-baseline tumor assessment were counted as non-responders.

Randomized population: All subjects who were randomized to the study. Only subjects with measurable disease at Baseline were included in the analysis. Subjects were included in the treatment group to which they were randomized.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline to the clinical cut-off date of 11 Feb 2013 (up to 2 years)

End point values	Trastuzumab Emtansine	Treatment of Physician's Choice		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	345	163		
Units: Percentage of Subjects				
number (confidence interval 95%)	31.3 (26.5 to 36.5)	8.6 (5.1 to 13.8)

## Secondary: Time to Pain Symptom Progression

End point title	Time to Pain Symptom Progression
-----------------	----------------------------------

End point description:

Time to pain symptom progression was defined as the time from randomization to the first documentation of an increase in narcotic use and/or a 10 point increase from Baseline in the pain score as measured by the European Organisation for Research and Treatment of Cancer, Quality of Life Questionnaire for patients with bone metastases (EORTC QLQ-BM22). The EORTC QLQ-BM22 assesses the symptoms of bone metastases using 22 items: 5 items for sites of pain, 3 pain characteristics, 8 functional interference aspects, and 6 psychosocial aspects. The pain score was derived from the 3 pain characteristic items. Each item was rated on a 4-point scale, where 1=Not at all to 4=Very much. The pain score was the sum of the 3 pain characteristic scores and was normalized to a scale of 0 to 100. A higher score indicates greater pain.

Subjects with Baseline pain score and  $\geq 1$  post-baseline pain score were included. Subjects were included in the treatment group to which they were randomized.

End point type	Secondary

upper limit	19.14

Notes:

[6] - The p-value for the difference in survival rate was derived from the z-test using the standard errors computed using Greenwood`s method.

<b>Statistical analysis title</b>	Difference in Survival Percentage (1 year)
Comparison groups	Trastuzumab Emtansine v Treatment of Physician's Choice
Number of subjects included in analysis	602
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0104 <sup>[7]</sup>
Method	z-test
Parameter estimate	Difference in Survival Percentage
Point estimate	11
Confidence interval	
level	95 %
sides	2-sided
lower limit	2.58
upper limit	19.33

Notes:

[7] - The p-value for the difference in survival rate was derived from the z-test using the standard errors computed using Greenwood`s method.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from treatment initiation until 30 days following the last administration of study treatment or study discontinuation on 31 August 2015 (up to approximately 4 years).

Adverse event reporting additional description:

Safety population: All subjects who received any amount of planned study treatment, according to treatment actually received. Data for subjects in the Treatment of Physician's Choice (TPC) arm who switched treatment to receive trastuzumab emtansine following disease progression on TPC are presented separately.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	18.0

### Reporting groups

Reporting group title	Trastuzumab Emtansine
-----------------------	-----------------------

Reporting group description:

Trastuzumab emtansine 3.6 mg/kg intravenously every 3 weeks until disease progression (as assessed by the investigator) or unmanageable toxicity.

Reporting group title	Treatment of Physician's Choice (TPC)
-----------------------	---------------------------------------

Reporting group description:

Treatment of physician's choice (TPC) until disease progression (as assessed by the investigator) or unmanageable toxicity. The treatments included single-agent chemotherapy, single-agent or dual-agent hormonal therapy for hormone receptor positive-disease, and HER2-directed therapy.

Reporting group title	Trastuzumab Emtansine - Post TPC Treatment Switch
-----------------------	---

Reporting group description:

Subjects, who switched treatment in the Treatment of Physician's Choice arm to trastuzumab emtansine, were administered trastuzumab emtansine 3.6 mg/kg intravenously every 3 weeks until disease progression (as assessed by the investigator) or unmanageable toxicity.

Serious adverse events	Trastuzumab Emtansine	Treatment of Physician's Choice (TPC)	Trastuzumab Emtansine - Post TPC Treatment Switch

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 December 2011	The inclusion criteria were modified as follows: 1) screening requirements were added for subjects with a history of bilateral breast cancer, 2) the maximum total bilirubin was changed to a direct bilirubin upper limit of normal for subjects with documented Gilbert's syndrome, 3) to ensure that subjects, who had a history of or newly diagnosed brain metastases, were not enrolled after only receiving prior systemic therapy without localised treatment. To conduct screening tumor assessments (computed tomography [CT]/magnetic resonance imaging and bone scans) within 28 days prior to randomization to align with the Response Evaluation Criteria in Solid Tumors guidelines Version 1.1. This amendment also modified the required tumor assessment interval to every 12 weeks ( $\pm 7$ days) for subjects in either treatment arm who had remained on a stable dose of study treatment with a maintained clinical response of stable disease (SD) or better at least 54 weeks after randomization. To clarify that patients who develop isolated progression in the brain but have systemic control of disease would be allowed to continue study treatment after localized treatment of brain metastasis. To clarify acceptable options and provide examples for the treatment of physician's choice (TPC). The dose modification criteria for trastuzumab emtansine were adjusted for thrombocytopenia and hepatotoxicity.
16 May 2012	The eligibility criteria were modified as follows: 1) removed the requirements for prior anthracycline and capecitabine, 2) removed the requirements around prior hormonal therapy, 3) shortened the time from treatment of brain metastases from 2 months to 1 month, 4) removed the specification that no more than 25% of a patient's bone marrow has received radiotherapy. Clarified that, in the control group with subjects receiving TPC, a combination of two agents maximum is allowed, except doublet chemotherapies. Clarified the doses of trastuzumab emtansine administered at cycles following the first cycle depend on the subject's weight variability. Clarified guidance around discontinuation or dose modification of trastuzumab emtansine. Clarified that subjects may withdraw from study treatment but still consent to follow-up for overall survival.
17 September 2012	The co-primary efficacy endpoints were changed from objective response rate (ORR) and overall survival (OS) to progression-free-survival (PFS) per investigator assessment and OS. ORR became a secondary efficacy endpoint. The sample size was reduced from 795 to 600 subjects. Independent review of tumor assessments was removed. One additional OS interim analysis was added. The secondary endpoint of clinical benefit rate was removed. Additional efficacy and safety analyses were added for subjects in the TPC arm who receive trastuzumab emtansine treatment after disease progression. The independent Data Monitoring Committee (iDMC) safety data review was to continue until the primary PFS analysis. To ensure the safety of subjects who wish to switch from TPC treatment to trastuzumab emtansine, specific eligibility criteria must be met prior to administration of their first dose of trastuzumab emtansine. The safety plan for subjects receiving trastuzumab emtansine arm was modified to reflect clinical experience with trastuzumab emtansine in multiple breast cancer studies.

03 July 2013	To facilitate a PFS audit, an Independent Review Facility (IRF) were to perform a blinded review of tumor scans from a subset of 160 subjects selected at random prior to unblinding of data for the primary PFS analysis. Following completion of the primary analysis of PFS, the following were to occur: 1)The frequency, method, and evaluation criteria for tumor assessments was to be determined by the investigator per local clinical practice, 2) The quality-of-life (patient-reported outcome [PRO]) assessments were to be discontinued. Updates were made to the safety plan for trastuzumab emtansine for clarity. Additional details on potential toxicities associated with trastuzumab emtansine, as well as suggestions for managing those toxicities, were provided. Exclusion criteria were added for subjects in the TPC arm who switched to receive trastuzumab emtansine treatment: 1) History of intolerance or hypersensitivity to trastuzumab or murine proteins, 2) History of pulmonary toxicity (e.g., interstitial lung disease, pneumonitis) due to trastuzumab, 3) Current bleeding of Grade $\geq$ 2. The dosing and administration section on trastuzumab emtansine was updated to include instructions on monitoring the infusion site. It has been clarified that hospitalization due solely to progression of the underlying cancer should not be reported as a serious adverse event. Suspected transmission of an infectious agent by the study drug has been added as an adverse event that requires expedited reporting to the Sponsor. A new safety section has been added regarding pregnancy and breastfeeding.
28 April 2014	Severe or fatal hemorrhage was added as an identified risk. The inclusion criterion with respect to pregnancy avoidance was amended. The time period to maintain pregnancy avoidance and notification to the Sponsor was increased from 6 months to at least 7 months after last dose of study drug. The period of time required for use of contraceptive measures and abstention from breastfeeding was extended from 6 months to 7 months after the last dose of study treatment. The adverse event reporting period was clarified. New adverse events were to be collected until 30 days after the last dose of study treatment.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
