Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 September 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 August 2021
Global end of trial reached?	Yes
Global end of trial date	17 September 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the activity of olaparib in patients with advanced prostate cancer who have progressed following one or two chemotherapy regimens including docetaxel.

Protection of trial subjects:

Patients were followed closely for any signs of adverse events of study treatment and the study protocol contains guidance for investigators on how to manage the adverse effects that were expected. The expected adverse effects were also listed in the patient information sheet. Patients had regular blood tests to ensure the safety of patients.

Patients were given a verbal explanation of the TOPARP trial and were offered the patient information sheet and any additional information about clinical trials and alternative treatments that would normally be offered to take home and discuss with friends and family. Patients were usually given at least 24 hours to consider the trial information and those who agreed to trial entry were asked to sign the consent form prior to any study specific procedures. The Principal Investigator at each site was responsible for ensuring written informed consent was obtained for each patient. This trial was overseen by an Independent Data Monitoring Committee, which would stop the study if there was any cause of concern with respect to patient safety and patients' oncologists would be notified immediately if this was the case.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 April 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 148
Worldwide total number of subjects	148
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	50
From 65 to 84 years	97
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

TOPARP-A: 50 patients recruited from 04/07/2012 to 22/09/2014, across 8 UK centres.

TOPARP-B: 98 patients recruited from 01/04/2015 to 30/08/2015, across 17 UK centres.

Pre-assignment

Screening details:

TOPARP-A screening: 88 patients assessed for eligibility, 38 excluded from trial entry (37 did not meet inclusion criteria; 1 fractured hip during screening).

TOPARP-B screening: Of the 592 patients with at least one sample good enough for analysis, 161 were had alterations in any DNA defect repair gene. Of these, 98 DDRm patients were randomised.

Period 1

Period 1 title	TOPARP-A and TOPARP-B trial entry (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	TOPARP-A: Olaparib 400mg

Arm description:

Patients receive single agent olaparib at a dose of 400 mg twice daily, continuously on a 28-day cycle. Olaparib will be administered until objective disease progression or unacceptable toxicity or patient withdrawal for whatever reason.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400mg orally, BID

Arm title	TOPARP-B: Olaparib 300mg
------------------	--------------------------

Arm description:

Patients randomised to receive 300mg twice daily, continuously on a 28-day cycle. Olaparib is administered until objective disease progression or unacceptable toxicity or patient withdrawal for whatever reason. Patients randomised to the 300mg group are offered the option of dose escalation to 400mg twice daily.

Arm type	Experimental
Investigational medicinal product name	Olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

400mg orally, BID

Investigational medicinal product name	Olaparib

End points

End points reporting groups

Reporting group title	TOPARP-A: Olaparib 400mg
-----------------------	--------------------------

Reporting group description:

Patients receive single agent olaparib at a dose of 400 mg twice daily, continuously on a 28-day cycle. Olaparib will be administered until objective disease progression or unacceptable toxicity or patient withdrawal for whatever reason.

Reporting group title	TOPARP-B: Olaparib 300mg
-----------------------	--------------------------

Reporting group description:

Patients randomised to receive 300mg twice daily, continuously on a 28-day cycle. Olaparib is administered until objective disease progression or unacceptable toxicity or patient withdrawal for whatever reason. Patients randomised to the 300mg group are offered the option of dose escalation to 400mg twice daily.

Reporting group title	TOPARP-B: Olaparib 400mg
-----------------------	--------------------------

Reporting group description:

Patients randomised to receive 400mg twice daily, continuously on a 28-day cycle. Olaparib is administered until objective disease progression or unacceptable toxicity or patient withdrawal for whatever reason.

Subject analysis set title	TOPARP-A biomarker positive
----------------------------	-----------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Patient was considered to be biomarker-positive if a homozygous deletion or deleterious mutation was identified in a gene reported to be involved either in DNA damage repair or sensitivity to PARP inhibition.

Subject analysis set title	TOPARP-A biomarker negative
----------------------------	-----------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Patient was considered to be biomarker-negative if a homozygous deletion or deleterious mutation was NOT identified in a gene reported to be involved either in DNA damage repair or sensitivity to PARP inhibition.

Primary: Composite Response

End point title	Composite Response
-----------------	--------------------

End point description:

The primary endpoint is response, which is defined on the basis of the following outcomes; if any of these occur patients will be considered to have responded:

- Confirmed objective response by modified RECIST 1.1 (i.e. either complete response (CR) or partial response (PR))
- PSA decline of $\geq 50\%$ from baseline, confirmed to be sustained by a second PSA value obtained four or more weeks later
- Conversion of circulating tumour cell count (CTC) from ≥ 5 cells/7.5 ml blood at baseline to < 5 cells/7.5 ml confirmed by a second consecutive value obtained four or more weeks later.

Evaluable patients with no confirmed response as defined above will be classified as non-responders.

End point type	Primary
----------------	---------

End point timeframe:

The first disease assessment is performed at 12 weeks post treatment start, then every 12 weeks onwards for RECIST and 4 weeks onwards for PSA and CTC.

End point values	TOPARP-A: Olaparib 400mg	TOPARP-B: Olaparib 300mg	TOPARP-B: Olaparib 400mg	TOPARP-A biomarker positive

Statistical analyses

Statistical analysis title	TOPARP-B Pick the winner
----------------------------	--------------------------

Statistical analysis description:

Under the TOPARP-B "pick-the-winner" design, each dose group is assessed independently for antitumour activity. If 19 or more of the planned 44 evaluable patients in one dose group respond (43%), then the dose group is considered successful. In the case where both dose groups are successful, the TOPARP-B SAP describes the strategy to select the successful dose based on response rates and secondary endpoints.

Comparison groups	TOPARP-B: Olaparib 300mg v TOPARP-B: Olaparib 400mg
Number of subjects included in analysis	92
Analysis specification	Pre-specified
Analysis type	other ^[6]
P-value	= 0.144 ^[7]
Method	Chi-squared
Parameter estimate	Response rate
Confidence interval	
level	95 %
sides	2-sided

Notes:

[6] - As per the trial "pick-the-winner" design, each dose is assessed separately in the 92 evaluable patients:

- 300 mg BID dose group: 18/46 evaluable with confirmed response. RR 39.1% (95%CI 25.1-54.6).
- 400 mg BID dose group: 25/46 evaluable with confirmed response. RR 54.3% (95%CI 39.0-69.1).

[7] - Exploratory - design (pick the winner) not powered for direct comparison of doses.

Statistical analysis title	TOPARP-A response by BM status
Comparison groups	TOPARP-A biomarker positive v TOPARP-A biomarker negative

Number of subjects included in analysis	49
Analysis specification	Pre-specified
Analysis type	superiority ^[8]
P-value	< 0.001 ^[9]
Method	Fisher exact
Parameter estimate	Odds ratio (OR)
Point estimate	108.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	13.8
upper limit	850.5

Notes:

[8] - Association between biomarker status and response

[9] - Fisher's exact p-value

Secondary: PSA response

End point title	PSA response
-----------------	--------------

End point description:

PSA partial response is defined as a $\geq 50\%$ decline in PSA value from cycle1 day 1 (baseline). This PSA decline must be confirmed to be sustained by a second PSA value obtained 4 or more weeks later.

End point type	Secondary
----------------	-----------

End point timeframe:

PSA response is first evaluated at 12 weeks post treatment start and then evaluated at each cycle of treatment (every 4 weeks).

End point values	TOPARP-A: Olaparib 400mg	TOPARP-B: Olaparib 300mg	TOPARP-B: Olaparib 400mg	
Subject group type	Reporting group	Reporting group	Reporting group

Units: Subjects				
PSA responses	10	13	17	

Notes:

[10] - Evaluable population

[11] - PSA evaluable

[12] - PSA evaluable

Statistical analyses

No statistical analyses for this end point

Secondary: Time to PSA progression

End point title	Time to PSA progression
-----------------	-------------------------

End point description:

PSA progression is defined as follows:

- If PSA while on treatment declines from baseline, PSA progression is defined when a $\geq 25\%$ increase and an absolute increase of ≥ 2 ng/mL above the nadir is documented, which needs to be confirmed by a second consecutive value obtained 3 or more weeks later.
- If there is no decline from baseline, PSA progression is defined when a $\geq 25\%$ increase and an absolute increase of ≥ 2 ng/mL above the baseline is documented after 12 weeks of treatment.

Time to PSA progression will be computed from date of start of olaparib to date of PSA progression. Patients who do not experience a PSA progression will be censored at the last PSA assessment date while on allocated treatment. In the TOPARP-B 300mg dose BID, PSA values after dose-escalation to 400mg BID are excluded from the analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

The first PSA reading is obtained at 12 weeks post treatment start then evaluated at each cycle of treatment (every 4 weeks).

Secondary: CTC response

End point title	CTC response
End point description: The proportion of patients with a CTC conversion to <5/7.5 ml blood at nadir (confirmed by a second consecutive value four or more weeks later) will be presented along an exact two-sided 95% confidence interval. Waterfall plots of CTC falls will also be presented that show the percentage change in CTC counts from baseline to 12 weeks as well as maximal CTC count declines that occur at any point after treatment. In Part B, the dose group will be displayed using different colours. Longitudinal spaghetti plots of CTC values over time will also be presented to explore the different patterns of response in Part B this will be conducted for each dose group. CTC response's association with PFS and OS will be examined via landmark analyses (to compare OS or PFS between CTC responders and non-responders at a given time point).	
End point type	Secondary
End point timeframe: The first assessment of CTC response is at 12 weeks post treatment. CTC is then evaluated at every cycle (4 weeks).

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of PSA response

End point title	Duration of PSA response
-----------------	--------------------------

End point description:

Duration of PSA response is calculated from the time the PSA value first declines by at least 50% of the cycle 1 day 1 (baseline) value (must be confirmed by a second value) until the time there is an increase of 25% of PSA nadir, provided the absolute increase is at least 2 ng/mL. The increase must be confirmed by a second consecutive measurement that is at least 25% above the nadir. If the PSA never shows a 25% increase over the nadir value, then the patient will be censored at the last PSA measurement. Duration of PSA response will be summarised by the median and presented along its 95% confidence interval. Time to PSA response on the duration of response (e.g. by fitting left-truncated models of adjusting by time to response) may be explored.

End point type	Secondary
----------------	-----------

End point timeframe:

PSA response is first evaluated at 12 weeks post treatment start and then evaluated at each cycle of treatment (every 4 weeks).

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AE) were collected on a continuous basis using NCI-CTCAE v4.02 reporting criteria from screening until 30 days after the last dose of olaparib, or until a new anti-cancer therapy is started.

Adverse event reporting additional description:

TOPARP-A: MedDRA v14, CTCAE v4.02

TOPARP-B: MedDRA v22, CTCAE v4.02

Assessment type	Non-systematic

Musculoskeletal and connective tissue disorders			
Musculoskeletal chest pain	Additional description: Musculoskeletal chest pain		
subjects affected / exposed	5 / 50 (10.00%)	8 / 49 (16.33%)	3 / 49 (6.12%)
occurrences (all)	8	12	4
Arthralgia	Additional description: Arthralgia		
subjects affected / exposed	20 / 50 (40.00%)	15 / 49 (30.61%)	12 / 49 (24.49%)
occurrences (all)	84	24	17
Back pain	Additional description: Back pain		
subjects affected / exposed	26 / 50 (52.00%)	14 / 49 (28.57%)	18 / 49 (36.73%)
occurrences (all)	103	21	26
Bone pain	Additional description: Bone pain		
subjects affected / exposed	17 / 50 (34.00%)	4 / 49 (8.16%)	1 / 49 (2.04%)
occurrences (all)	42	6	1
Groin pain	Additional description: Groin pain		
subjects affected / exposed	7 / 50 (14.00%)	3 / 49 (6.12%)	3 / 49 (6.12%)
occurrences (all)	28	3	3
Muscle spasms	Additional description: Muscle spasms		
subjects affected / exposed	1 / 50 (2.00%)	6 / 49 (12.24%)	3 / 49 (6.12%)
occurrences (all)	6	7	4
Muscular weakness	Additional description: Muscular weakness		
subjects affected / exposed	7 / 50 (14.00%)	6 / 49 (12.24%)	4 / 49 (8.16%)
occurrences (all)	17	6	4
Musculoskeletal pain	Additional description: Musculoskeletal pain		

subjects affected / exposed	8 / 50 (16.00%)	8 / 49 (16.33%)	7 / 49 (14.29%)
occurrences (all)	34	10	12
Myopathy	Additional description: Myopathy		
subjects affected / exposed	3 / 50 (6.00%)	0 / 49 (0.00%)	0 / 49 (0.00%)
occurrences (all)	12	0	0
Neck pain	Additional description: Neck pain		
subjects affected / exposed	3 / 50 (6.00%)	1 / 49 (2.04%)	3 / 49 (6.12%)
occurrences (all)	19	1	3
Pain in extremity	Additional description: Pain in extremity		
subjects affected / exposed	14 / 50 (28.00%)	0 / 49 (0.00%)	0 / 49 (0.00%)
occurrences (all)	39	0	0
Myalgia	Additional description: Myalgia		
subjects affected / exposed	2 / 50 (4.00%)	3 / 49 (6.12%)	1 / 49 (2.04%)
occurrences (all)	7	3	1
Infections and infestations			
Lower respiratory tract infection	Additional description: Lower respiratory tract infection		
subjects affected / exposed	0 / 50 (0.00%)	2 / 49 (4.08%)	4 / 49 (8.16%)
occurrences (all)	0	2	6
Influenza like illness	Additional description: Influenza like illness		
subjects affected / exposed	0 / 50 (0.00%)	5 / 49 (10.20%)	3 / 49 (6.12%)
occurrences (all)	0	6	4
Urinary tract infection	Additional description: Urinary tract infection		
subjects affected / exposed	5 / 50 (10.00%)	8 / 49 (16.33%)	6 / 49 (12.24%)
occurrences (all)	5	13	6
Metabolism and nutrition disorders			
Decreased appetite	Additional description: Decreased appetite		
subjects affected / exposed	23 / 50 (46.00%)	13 / 49 (26.53%)	15 / 49 (30.61%)
occurrences (all)	75	14	24
Hyperglycaemia	Additional description: Hyperglycaemia		
subjects affected / exposed	4 / 50 (8.00%)	0 / 49 (0.00%)	1 / 49 (2.04%)
occurrences (all)	4	0	1
Hypoalbuminaemia	Additional description: Hypoalbuminaemia		
subjects affected / exposed	3 / 50 (6.00%)	0 / 49 (0.00%)	0 / 49 (0.00%)
occurrences (all)	3	0	0
Hypokalaemia	Additional description: Hypokalaemia		

subjects affected / exposed	6 / 50 (12.00%)	8 / 49 (16.33%)	3 / 49 (6.12%)
occurrences (all)	17	9	4
Hyponatraemia	Additional description: Hyponatraemia		
subjects affected / exposed	7 / 50 (14.00%)	3 / 49 (6.12%)	2 / 49 (4.08%)
occurrences (all)	8	3	3

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 March 2012	Provide clarification to end of treatment and end of study definition, follow up time frames, assessment time frames and removal of data collection not necessary for study analysis.
12 November 2012	Updates of adverse events in line with Olaparib Investigator Brochure Edition 8. Clarification of the requirement for archival tumour tissue and fresh biopsy. Clarification that CTC count at screening must be confirmed by central laboratory. Additional guidance of fasting requirements prior to some blood sample collection. Addition of sample collection at specified time points
15 April 2014	Clarification of measurement of CTC conversion. Updated inclusion criteria on how long patients should be independent of transfusions for and albumin value. Clarification of the therapies not permitted after termination of olaparib use and recommended time before commencing a new anticancer treatment. Extension of CTC sample collection window prior to start of olaparib. Update to allow biopsy and blood samples taken prior to consent, within a specified window, to be used at screening. Addition of Coagulation studies at specified time points. Addition of whole genome sequencing.
26 June 2015	Specification of requirements and procedures for TOPARP A and TOPARP B. Addition of TOPARP B: patients will be randomised to receive 300mg or 400 mg twice daily. Amendment from 44 patients to 88 patients (44 in each group) in TOPARP B. Addition of the dose of 300mg ID to study the tolerability and antitumour activity of both dose level in TOPARP B. Patients receiving 300mg will be allowed to escalate to 400mg upon disease progression in clinically indicated. Amendment to modified RECIST 1.1 from modified RECIST. Removal of objective response (PSA-ORR) as secondary endpoint. Addition of secondary endpoint as percentage change of PSA from baseline to 12 weeks (or earlier if discontinued therapy) and maximise PSA decline while on treatment; TOPARP B only - Cmax and AUC after first dose and at steady state for the 400mg and 300mg BID dose levels. Addition of exploratory endpoint - TOPARP B only - to evaluate the response rate following dose-escalation from 300mg to 400mg BID. Addition of post confirmation of the presence of the putative predictive biomarkers in TOPARP B. Addition of pre-screening stage to confirm presence of biomarker. Addition of 250mg for dose reduction and removal of 100mg dose reduction. Clarification that fresh biopsy is optional in TOPARP B. Clarification that patients can be discontinued on clinical progression as well as radiological progression. Addition of pharmacokinetic analysis for TOPARP B.
15 March 2018	Updates of adverse events in line with olaparib Investigator Brochure Edition 14. Extension of follow up scans beyond 2 years whilst on study treatment. Clarification and updates of inclusion criteria. Updates to permitted windows and time points for study assessments. Updates on pharmacokinetic samples in line with PK sub-study closure. Update to SAE reporting period.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
