Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 January 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 December 2015
Global end of trial reached?	Yes
Global end of trial date	06 December 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The principal research question is to find out whether testosterone replacement therapy can reduce body fat and improve quality of life in young male cancer survivors who have a borderline low level of testosterone. This question is split in to two principal research objectives which are: • To assess the effect of 26 weeks of testosterone treatment on levels of fat within the body • To assess the effect of 26 weeks of testosterone treatment on the participants' physical functioning. This information is collected using questionnaires that are completed by the participant.

Protection of trial subjects:

Testosterone gel is a drug that is widely used and has a robust safety profile. It is accepted as being a low risk drug with serious side effects occurring very rarely. As such the risk to the participant of using a drug that they may not have otherwise received is believed to be very low. As all participants were expected to receive testosterone gel for at least 13 weeks all participants should receive some benefit to outweigh the minimal risk.

Participants received 2 whole body scans called DXAs which involved a very low dose of radiation, about the same as you would get from the Earth's atmosphere in a few days, and less than you would get from taking a flight to America. The Xray exposure in the study has been assessed and approved by a radiation expert. The Health Protection Agency Radiation Protection Division describes a few days natural background radiation as 'negligible risk' and participants are unlikely to experience any health problems from these scans.

Throughout the study participants were asked to have 6 additional blood tests which were the same as normal blood tests that participants will have had them before during cancer treatment. As with any blood test, there was a small risk of bruising and discomfort, and very rarely infections. These tests were performed in hospitals by appropriately trained members of staff.

Tostran gel may cause skin irritation such as a rash. Less commonly it can cause an increase in the participants' number of red blood cells, increased hair growth, enlargement of the male breast tissue, soft tissue swelling and an increase in PSA (Prostate Specific Antigen) levels. To minimise these risks red blood cell count and PSA were tested regularly during the study, and if the participants' doctor thought they were having significant side effects they could withdraw them from the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 May 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 136
Worldwide total number of subjects	136
EEA total number of subjects	136

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	136
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between May 2012 and March 2015, 1407 patients were screened for the TRYMS trial, of which 304 were registered and 136 were randomised to the TRYMS trial.

Pre-assignment

Screening details:

1407 patients screened. 1103 were not registered because: they did not want to participate (N=399), clinically ineligible (N=610), too ill to consent (N=2), Other (N=46), no reason given (N=46). 168 were registered but not randomised because: ineligible (N=152), other (N=16). 136 patients were randomised.

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

Treatment/placebo gels and canisters identical in appearance and identified by unique code assigned at random by Statistician to maintain the blind of patients and site staff (except in the case of emergency unblinding). All CTRU staff remained blind apart from key personnel incl. Statisticians and safety team for SUSAR reporting and independent endocrinologist for escalation of out-of-range testosterone levels after 2W. Testosterone samples taken at baseline and 26W analysed centrally.

Arms

Are arms mutually exclusive?	Yes
Arm title	Tostran 2% Gel

Arm description:

- One gram of gel contains 20mg testosterone. One press of the canister piston delivers 0.5g of gel containing 10mg testosterone.
- Supplied by ProStrakan

Arm type	Active comparator
Investigational medicinal product name	Tostran 2% gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Cutaneous use

Dosage and administration details:

3g gel (containing 60mg testosterone)/day applied cutaneously. At 2 weeks the dose may be adjusted based on the participants serum testosterone levels. If serum testosterone is lower than 11nmol/l the daily dose will be increased by 20mg, if serum testosterone is between 11 and 15nmol/l the daily dose will be increased by 10mg. If the testosterone level is greater than 15 but lower than 35 the daily dose will remain the same and if the level is between 35nmol and 40nmol/l then the daily dose will be reduced by 20mg. If the testosterone level is greater than 40nmol/l the unblinded endocrinologist will determine an appropriate dose.

Arm title	Placebo
------------------	---------

Arm description:

- Composition: Propylene glycol, ethanol anhydrous, isopropylalcohol, oleic acid, carbomer 1382, trolamine, butylhydroxytoluene (E321), water, purified and hydrochloric acid (for pH) adjustment
- Supplied by ProStrakan

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo gel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gel
Routes of administration	Cutaneous use

Dosage and administration details:

3g gel/day applied cutaneously for 2 weeks. At 2 weeks dosage adjusted at random in line with active arm dose titration. Treatment continues for a further 24 weeks.

[4] - Prior to multiple imputation 7&8 patients were missing abs change data at 13 &26 weeks respectively.

Statistical analyses

Statistical analysis title	SF36 Physical Functioning
Statistical analysis description:	
Repeated measures Logistic regression was used to model the binary endpoint of perfect physical functioning (score=100) vs non perfect physical functioning (score<100) because the data were strongly negatively skewed. Baseline measurement, stratification factors, treatment, time and treatment-time interaction were adjusted for as fixed effects. All missing Physical Functioning scores were assumed to be <100. point estimates are presented for the 26 week timepoint.

lower limit	-1.99
upper limit	1.2

Secondary: FACIT Fatigue

End point title	FACIT Fatigue
-----------------	---------------

End point description:

Summary statistics reported for absolute change on the continuous scale at 26 weeks (from baseline).
Treatment effect estimates are reported for Active Tostran vs placebo at 26 weeks.

End point type	Secondary
----------------	-----------

End point timeframe:

collected at baseline, 13 weeks and 26 weeks.

End point values	Tostran 2% Gel	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	68 ^[27]	68 ^[28]		
Units: units				
arithmetic mean (standard deviation)	4.32 (± 10.65)	5.14 (± 7.12)		

Notes:

[27] - Prior to multiple imputation, 3&8 patients were missing abs change at 13&26 weeks.

[28] - prior to multiple imputation, 7&9 patients were missing data at 13&26 weeks.

Statistical analyses

Statistical analysis title	FACIT Fatigue
----------------------------	---------------

Statistical analysis description:

Repeated measures linear regression adjusted for baseline score, stratification factors, treatment, time, treatment-time interaction.

Comparison groups	Tostran 2% Gel v Placebo
Number of subjects included in analysis	136
Analysis specification	Pre-specified
Analysis type	superiority
Parameter estimate	Mean difference (final values)
Point estimate	-0.63
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.4
upper limit	2.13

Secondary: DISF-SR (II) M

End point title	DISF-SR (II) M
-----------------	----------------

End point description:

Summary statistics reported for absolute change on the continuous scale at 26 weeks (from baseline).

Note that a formal analysis has not been conducted on this endpoint because of large amounts of missing data. We were unable to ascertain reasons for missing data as they could be because the questions are not relevant (if they do not have a partner) or because they did not want to complete them (e.g. due to the sensitivity of the questions).

End point type	Secondary
----------------	-----------

End point timeframe:

collected at baseline, 13 weeks and 26 weeks.

End point values	Tostran 2% Gel	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	44 ^[29]	40 ^[30]		
Units: units				
median (inter-quartile range (Q1-Q3))	7.5 (-6.5 to 20.5)	12 (-2 to 25.5)		

Notes:

[29] - 24 patients missing data at 26 weeks

[30] - 28 patients missing data at 26 weeks

level	95 %
sides	2-sided
lower limit	-0.15
upper limit	0.15

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were reports at 6, 13, 19 and 26 weeks after randomisation. A further follow-up phone call was made to the participant 30 days after finishing trial treatment.

Adverse event reporting additional description:

Adverse events of specific interest (urinary symptoms or skin rash/irritation) and/or severity (CTCAE grade 3 and above) were recorded with relevant information recorded as volunteered by the participant, discovered by investigator questioning or detected through physical examination, lab test, or other investigation,.

Assessment type	Systematic

Reporting groups

Reporting group title	Active
-----------------------	--------

Reporting group description:

Participants allocated to receive Tostran 2% gel (active treatment).

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Patients allocated to receive placebo gel

Serious adverse events	Active	Placebo	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 68 (0.00%)	0 / 68 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Active	Placebo	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	27 / 68 (39.71%)	26 / 68 (38.24%)	
General disorders and administration site conditions			
Chest pain			
subjects affected / exposed	1 / 68 (1.47%)	0 / 68 (0.00%)	
occurrences (all)	1	0	
Fatigue			

subjects affected / exposed occurrences (all)	1 / 68 (1.47%) 1	0 / 68 (0.00%) 0	
Gastrointestinal disorders Dyspepsia subjects affected / exposed occurrences (all)	1 / 68 (1.47%) 1	1 / 68 (1.47%) 1	
Skin and subcutaneous tissue disorders non-specific rash subjects affected / exposed occurrences (all)	25 / 68 (36.76%) 41	21 / 68 (30.88%) 34	
Renal and urinary disorders Urinary symptoms subjects affected / exposed occurrences (all)	1 / 68 (1.47%) 2	5 / 68 (7.35%) 5	
Psychiatric disorders Insomnia subjects affected / exposed occurrences (all) Anxiety subjects affected / exposed occurrences (all)	1 / 68 (1.47%) 1 1 / 68 (1.47%) 1	0 / 68 (0.00%) 0 0 / 68 (0.00%) 0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 September 2011	Schedule of Events table in protocol updated to document SAE collection at baseline and during eligibility assessment. Additional withdrawal criterion added to include withdrawal of patients who suffer AE grade 3 or higher.
15 May 2013	Protocol updated to include statement that eligibility waivers are not permitted; addition of inclusion criteria to allow patients who are more than 12 months from end of glucocorticoid treatment following allogeneic bone marrow transplant; clarification that both oral & IV corticosteroid treatment are exclusions; addition of historical allergic reaction to Tostran as an exclusion; addition of active chronic graft vs host disease as an exclusion; addition of disease or current medication known to have effects on body fat mass added as an exclusion; addition of severe obstructive sleep apnoea as an exclusion; addition of active liver disease as an exclusion; addition of uncontrolled hypertension as an exclusion; exclusion criterion renal failure changed to renal impairment; deep vein thrombosis deleted as an exclusion criterion; clarification that patients may not be randomised more than once; additional information provided on how patients should be approached about participating in the trial; clarification that canister code lists will only be password protected when treatment allocation info is included on the list; addition of advice stating that IMP should be applied in the morning; various amendments to information given about the titration sample; amendment to state that for serum testosterone levels between 35nmol/l & 40nmol/l testosterone dose will be reduced by 20mg and if testosterone level is greater than 40nmol/l the independent endocrinologist will determine an appropriate dose between 20-40mg; deletion of significant changes to other hormone replacement therapy as a withdrawal criterion; deletion of treatment with oral corticosteroids for longer than a week as a withdrawal criterion; changes to timing of blood samples; inclusion of additional oestradiol measurement; changes to definition of end of trial, SAEs, SUSARs; amendment to state that the significance levels for the two primary endpoints have been adjusted to avoid an inflated type I error.
25 November 2013	Protocol amended to exclude participation of patients who are intending to conceive in the next 12 months (6 months of trial treatment + 6 months for sperm count to return to pre-trial levels).
02 April 2014	Protocol and patient information amended to allow addition of optional preliminary consent process to allow eligibility assessments to be performed prior to main consent; clarification regarding timing of testosterone samples clarification regarding the storage of serum samples; clarification that the measurement of fasting lipids is not time dependent.
16 October 2014	Major amendment to the protocol to change the trial design and sample size. For the primary endpoint the two baseline testosterone subgroups (7.0-9.9nmol/L: 10-12nmol/L) were combined and a minimum sample size of 112 participants introduced, with the treatment effect for each of the subgroups to be estimated in an exploratory manner. Protocol also amended to clarify that only deaths occurring after randomisation and within the trial period should be reported and that pregnancies in trial participants partners will be followed up until the outcome is known.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Please note that there was 1 patient in the placebo group who experienced an SAE but this was not related to treatment. Details have not been included in the database due to potential risk of identifiability.

Notes:
