EU Clinical Trials Register

Clinical trial results:
Control of moderate or severe asthma with 160, 320 and 640 mcg ciclesonide/day. A one-year randomised, double-blind, multicenter trial.

Summary

EudraCT number	2011-000683-99
Trial protocol	DE
Global end of trial date	15 August 2014

Results information

Result version number	v1
This version publication date	10 May 2016
First version publication date	10 May 2016

Trial information

Trial identification

Sponsor protocol code	CL-9709-301-RD

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	U1111-1133-6333

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 August 2014
Global end of trial reached?	Yes
Global end of trial date	15 August 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The aim of the trial is to investigate asthma control with 160 to 640 mcg ciclesonide/day. Asthma control will be assessed by the Asthma Control Questionnaire (ACQ).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 November 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 72
Country: Number of subjects enrolled	Brazil: 86
Country: Number of subjects enrolled	Germany: 60
Country: Number of subjects enrolled	Israel: 59
Country: Number of subjects enrolled	Russian Federation: 90
Worldwide total number of subjects	367
EEA total number of subjects	60

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	16
Adults (18-64 years)	314
From 65 to 84 years	37

85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 5 investigative sites in Argentina, Brazil, Germany, Israel and Russia from 10 November 2011 to 15 August 2014.

Pre-assignment

Screening details:

Subjects with a historical diagnosis of persistent bronchial asthma for at least 6 months,treated with a stable inhaled corticosteroid (ICS)dose for at least 12 weeks were enrolled in a single-blind baseline period receiving 160 microgram(mcg)ciclesonide,then a double-blind treatment period in 1 of 3 treatment arms: ciclesonide 160,320,640 mcg.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment Period: Ciclesonide 160 mcg

Arm description:

Ciclesonide 80 mcg, metered dose inhaler (MDI), inhalational, twice daily for up to 3 weeks in the baseline period. Ciclesonide 80 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment period.

Arm type	Experimental
Investigational medicinal product name	Ciclesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Ciclesonide 80 mcg, metered dose inhaler (MDI), inhalational, twice daily for up to 3 weeks in the baseline period. Ciclesonide 80 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment period.

Arm title	Treatment Period: Ciclesonide 320 mcg

Arm description:

Ciclesonide 160 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment period.

Arm type	Experimental
Investigational medicinal product name	Ciclesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Ciclesonide 160 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment period.

Arm title	Treatment Period: Ciclesonide 640 mcg

Arm description:

Ciclesonide 320 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment

period.

Arm type	Experimental
Investigational medicinal product name	Ciclesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

Ciclesonide 320 mcg, MDI, inhalational, twice daily for up to 52 weeks in the double blind treatment period.

Number of subjects in period 1	Treatment Period: Ciclesonide 160 mcg	Treatment Period: Ciclesonide 320 mcg	Treatment Period: Ciclesonide 640 mcg
Started	120	122	125
Completed	89	92	97

arithmetic mean	27.34	28.42	27.12
standard deviation	± 5.217	± 6.346	± 5.373

Baseline asthma control questionnaire (ACQ)

ACQ score includes 5 questions about symptoms, beta-2 agonist use and lung function. Subjects recall their experiences during the previous 7 days and respond to each question using a 7-point scale ranging between 0 (well controlled) to 6 (extremely poorly controlled). The baseline ACQ score was defined as the average of the available measurements of the last 2 weeks at site before starting treatment.

Units: units on scale			
arithmetic mean	2.24	2.16	2.2
standard deviation	± 0.304	± 0.384	± 0.361

Pre-forced expiratory volume in 1 second (FEV1)

FEV1 is the maximal volume of air exhaled in the first second of a forced expiration from a position of full inspiration.

Units: liter (L)			
arithmetic mean	2.2	2.35	2.23
standard deviation	± 0.792	± 0.798	± 0.801

Post-FEV1

FEV1 is the maximal volume of air exhaled in the first second of a forced expiration from a position of full inspiration.

Units: Lx			
arithmetic mean	2.71	2.84	2.76
standard deviation	± 0.915	± 0.883	± 0.906

FEV1 reversibility

FEV1 is the maximal volume of air exhaled in the first second of a forced expiration from a position of full inspiration.

Units: Lx			
arithmetic mean	25.5	23	26.5
standard deviation	± 17.02	± 17.1	± 20.78

Pre FEV1 predicted

FEV1 is the maximal volume of air exhaled in the first second of a forced expiration from a position of full inspiration.

Units: Lx

Secondary: Number of Subjects Reporting Time to First Well-Controlled Asthma and ACQ Improvement

End point title	Number of Subjects Reporting Time to First Well-Controlled

	Asthma and ACQ Improvement

End point description:

Well-controlled asthma at the end of the study was defined as a subject with an ACQ score of 0.75 or lower. ACQ score includes 5 questions about symptoms, beta-2 agonist use and lung function. Subjects recall their experiences during the previous 7 days and respond to each question using a 7-point scale ranging between 0 (well controlled) to 6 (extremely poorly controlled). ACQ improvement was defined as a subject with ACQ improvement of at least 0.5 at the end of the study. The time to first measurement of well-controlled asthma from randomization and the time to the first ACQ improvement from randomization was analyzed separately using a log-rank test. Baseline was defined as the average of the ACQ measurements of the last 2 weeks at site prior to first intake of double-blind study medication.

Secondary: Number of Subjects Reporting Time to First Well-Controlled Asthma Measurement by ACQ Cut-Off Point

End point title	Number of Subjects Reporting Time to First Well-Controlled Asthma Measurement by ACQ Cut-Off Point

End point description:

Well-controlled asthma was defined as an ACQ score of equal to or lower than the ACQ cut-off point. ACQ score includes 5 questions about symptoms, beta-2 agonist use and lung function. Subjects recall their experiences during the previous 7 days and respond to each question using a 7-point scale ranging between 0 (well controlled) to 6 (extremely poorly controlled).The frequency of subjects below ACQ cut-off points of 0.5, 0.75, 1.0, 1.25, and 1.5 were analyzed over time using the site-based ACQ measurements. Baseline was defined as the average of the ACQ measurements of the last 2 weeks at site prior to first intake of double-blind study medication.

End point type	Secondary

Secondary: Number of Subjects Reporting One or More Treatment-emergent Adverse Events (TEAE)

End point title	Number of Subjects Reporting One or More Treatment-emergent Adverse Events (TEAE)[3]

End point description:
An Adverse Event (AE) is defined as any untoward medical occurrence in a clinical investigation subject administered a drug; it does not necessarily have to have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (eg, a clinically significant abnormal laboratory finding), symptom, or disease temporally associated with the use of a drug, whether or not it is considered related to the drug. TEAE is defined as an adverse event with an onset that occurs after receiving study drug. AEs included both serious AEs and non-serious AEs. Baseline of double-blind treatment period was defined as the average of the measurements of the last 2 weeks at site prior to first intake of double-blind study medication.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events are adverse events that started after the first dose of double-blind study drug and no more than 30 days for a serious adverse event after the last dose of double-blind study drug.

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the subject or observed by the investigator was recorded, irrespective of the relation to study treatment.

occurrences (all)	7	10	5

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol?   No

Interruptions (globally)

Were there any global interruptions to the trial?   No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Refer ClinicalTrials.gov (CL-9709-301-RD,NCT01455194)results of Ciclesonide 160mcg arm baseline period because EUDRACT system does not allow the reporting of data available for the arm, which includes subjects that were not part of target population.

Notes:
