Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 September 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 May 2018
Global end of trial reached?	Yes
Global end of trial date	14 January 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To test the hypothesis that in women with normal thyroid function but with thyroid peroxidase antibodies (TPO), levothyroxine (50mcg, oral, once daily), started pre-conceptually and continued to the end of pregnancy, compared with placebo, increases the proportion of women who attain a live birth beyond 34 completed weeks of gestation by at least 10%.

Protection of trial subjects:

No special measures were required to minimise pain or distress in this patient population.

Background therapy:

A systematic review of 31 studies involving euthyroid women showed a strong association between the presence of thyroid peroxidase antibodies and miscarriage (odds ratio, 3.90; 95% confidence interval [CI], 2.48 to 6.12; $P < 0.001$) and preterm birth (odds ratio, 2.07; 95% CI, 1.17 to 3.68; $P = 0.01$). Studies included in the systematic review involved women with recurrent miscarriage, infertile women, and unselected populations.

The 2017 guidelines of the American Thyroid Association stated that "insufficient evidence exists to conclusively determine whether LT4 [levothyroxine] therapy decreases pregnancy loss risk in TPOAb-positive [thyroid peroxidase antibody-positive] euthyroid women who are newly pregnant" and recommended that "administration of LT4 to TPOAb-positive euthyroid pregnant women with a . . . history of loss may be considered given its potential benefits in comparison with its minimal risk." The guideline task force drew attention to our ongoing trial. We designed the multicenter, randomized, placebo-controlled Thyroid Antibodies and Levothyroxine (TABLET) trial to investigate whether the use of levothyroxine would increase the rates of live births after at least 34 weeks of gestation among euthyroid women with thyroid peroxidase antibodies.

Evidence for comparator:

Participants were randomly assigned in a 1:1 ratio to receive oral capsules containing either 50 µg of levothyroxine or matched placebo once a day. Administration of the trial agents began immediately after randomization. The appearance, route, and timing of the administration of the trial agents were identical in the two groups. Throughout the duration of the trial, the participants, clinicians, and trial nurses were unaware of the trial-group assignments.

Actual start date of recruitment	01 September 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 952
Worldwide total number of subjects	952
EEA total number of subjects	952

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	952
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The participants were recruited from 49 hospitals across the United Kingdom. 1420 were eligible for enrollment in the trial, of whom 952 consented to participate and were randomly assigned to receive either levothyroxine (476 women) or placebo (476 women).

Pre-assignment

Screening details:

A total of 19,556 women underwent tests to detect thyroid peroxidase antibodies and thyroid-function tests between December 2011 and January 2016. Of these women, 1420 were eligible for enrollment in the trial, of whom 952 consented to participate and were randomly assigned to receive either levothyroxine (476 women) or placebo (476 women).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Levothyroxine

Arm description:

50 µg of levothyroxine once a day.

Arm type	Experimental
Investigational medicinal product name	Levothyroxine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

oral capsules containing 50 µg of levothyroxine taken once a day.

Arm title	Placebo
------------------	---------

Arm description:

Oral placebo taken once a day.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral placebo capsules taken once a day.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 July 2011	<ol style="list-style-type: none">1. Protocol Version 2.0 Addition of members to steering committee and DMC.2. Protocol Version 2.0 Addition of two further exclusion criteria. a) Women who intend to conceive using ovulation stimulation therapy. Women with ovulation stimulation treatment will have a very different hormonal milieu to those without ovarian stimulation. Thus the endocrinologists (and in fact one of the EME reviewers) suggested excluding these patients.b) Women with previous or current cardiac disease. Thyroxine has the effect of increasing heart rate, and will need to be carefully titrated in patients with cardiac disease. Thus this trial will not be suitable for them.3. Protocol Version 2.0 Addition of Roche Cobas Analyser to specified Analysers for trial participation.4. Protocol version 2.0 Additional appointment at 9 months post randomisation and pre-pregnancy to dispense a further 3 month supply of trial medication. This was previously covered by an appointment at 3 months post randomisation and pre pregnancy, where 6 months of medication was dispensed in one appointment. This extra appointment will overcome any potential problems involving drug expiry date of the IMP or Placebo and would also enable the trial investigators to meet with the participant and discuss any trial related issues.5. Protocol version 2.0 Addition of collection of anonymised excess serum to be used for quality control purposes, and possible future analyses of other biomarkers, which we understand will require separate ethical approval.6. Protocol Version 2.0 Minor changes in spelling, typos and table/section references.
24 November 2011	<ol style="list-style-type: none">1. Protocol version 3.0 section 4.2 page 10 - In a double blind study there is no risk of foreknowledge, and therefore the sentence has been revised to read more clearly.2. Protocol version 3.0 Section 5.1.4 page 11 - Revision of word "given" to "taken" as the capsule will be self-administered. The following sentence "A sheet giving instructions on how to take the capsules, and what to do if a capsule is missed, will be given to the participant at the randomisation appointment." has been inserted to inform of instructions sheet to take medication included in this submission. Deletion of sentence referring to attending clinician, as participant will be outpatient.3. Protocol Version 3.0 section 5.3 page 12 re-arrangement of sentence - The Trial coordinator will monitor drug compliance with help from Pharmacy Accountability logs.4. Protocol Version 3.0 section 8.3.1 Page 22 - removal of sentences "The Trial Statistician may be unblinded to the level of groups A and B. A and B will be made know to the DMC if appropriate" In section 5.5.3 the Trial Protocol does not specify statistician in the list of blinded people. In order to produce DMC reports at the A/B level, the trial Statistician would not be blinded. The following sentence has also been removed in line with this change.

04 April 2012	<p>1.Target the Infertility population for screening and recruitment.</p> <p>2.To increase the range of TFT analysers which are permitted for the trial. These are broadly the most frequently used analysers in the country. This will enable us to recruit from a wider range of centres. We have found that restricting to the Roche Analysers very limiting, meaning that other keen hospitals are not been given an opportunity to participate in the trial. The reference ranges for each analyser will be determined by the thyroid experts on the TMG. We feel that this change presents an opportunity to reflect the general UK population in the trial.To account for the variation in analysers we have also widened the Free T4 range Inclusion Criteria range to be between 10.0 to 21.0 pmol/L.</p> <p>3.To allow for blood for screening to be taken at the first approach to the patient. (This is mainly at the request of the patients who would prefer their blood sample to be taken immediately with other bloods rather than having to return for a blood sample).</p> <p>4.Removal of a DMC Member who has resigned from the trial DMC due to increasing trial commitments. (A replacement is being sought).</p> <p>5.Listing specific examples of conditions which are not required to report an SAE.</p>
25 September 2014	<p>As timeframes for initial patient contact are short, and patients may be distressed, there are times when the patient is discharged before contact is made, even though they are aware of the trial. We wish to be able to contact the patient following discharge.</p> <p>We must exclude women with a current thyroid disorder, but do not want to exclude all women who have required only short-term treatment a significant time ago. It would be difficult to propose criteria for inclusion, so we propose that the small number of women who fall into this category are considered on a case by case basis, with discussion between the local PI and chief investigator. There is no safety reason to exclude these women.</p> <p>Patients who are initially screened for the trial are sometimes not contactable by telephone or will not answer calls from private numbers on their mobile phones. We wish to introduce a letter, to have the ability to contact patients with normal blood results by letter. We have introduced Patient Normal Results Letter v1.0 16/2/15 and amended the word "telephone" to "contact" in the Patient Screening Leaflet so it is now v5.0 16/2/15.</p> <p>Clarification that a trial number and treatment bottle are not allocated until all essential information is entered on to the randomisation database.</p> <p>We are explicitly mentioning that the randomisation algorithm will be minimised by centre. Given the study is double blind we do not believe this will be an issue. Adding the term pregnancy loss to clarify that all forms of pregnancy loss constitute an outcome of trial and that trial participation and trial drug use cease at this point.</p> <p>In a measure to gather good compliance data we are asking the trial participant a question on estimated percentage of time the IMP is taken, in addition to pill counting</p> <p>To clarify the clinical management of thyroid problems which are identified within the trial, we have re-worded some sections of the protocol and refer clinicians to guidance agreed by the TMG.</p>
24 June 2015	<p>Contents page amended to list Appendix I Summary of Product Characteristics. Section 6.1.4 changed wording.</p> <p>Appendix I changed wording to replace page on expected toxicities.</p> <p>Non Substantial Changes SmPC v3.0 24th June 2015 SmPC v4.0 25th June 2015 SmPC v5.0 26th June 2015</p>
13 April 2016	Update the SmPC for the trial IMP Levothyroxine to 6.0
31 October 2016	<p>Section: 4.2 update to the stratification variables.</p> <p>Sections: 5.1.3 clarification of the manufacturing authorisation holder to reflect the changes submitted in SA21.</p>

04 October 2017	1.Update to the Trial Management Group. 2.Section 3.4.2 –Clarification to the exclusion criteria. 3.Section 5.1.1 -Clarification of safety assessments. 4.Section 5.1.3-Clarification on storage of IMP. 5.Section 5.2.1 –Clarification of treatment duration. 6.Section 5.3 –Clarification of compliance monitoring. 7.Section 5.5 –Clarification of withdrawal process. 8.Section 6.1.2/6.1.3/6.3/6.4 –Clarification of reporting SUSARs. 9.Section 7 –Clarification of follow up and secondary measures. 10.Section 8.1 –Clarification of primary outcome measure. 11.Section 8.3 –Clarification of statistical analysis. 12.Section 9.4 –Clarification of Data Monitoring and Ethics Committee. 13.Appendix I –updated SmPC for Levothyroxine.
