Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 September 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 September 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to determine whether subjects with platinum-resistant squamous cell carcinoma of the head and neck (SCCHN) who receive either Golvatinib (E7050) administered with Cetuximab or Cetuximab alone experience greater benefit.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008). - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use. - Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312. - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states. - Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 September 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Korea, Republic of: 36
Country: Number of subjects enrolled	Ukraine: 36
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	95
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	69
From 65 to 84 years	26
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 28 investigative sites in the Republic of Korea, Ukraine, United Kingdom, and the United States from 19 September 2011 to 04 September 2017.

Pre-assignment

Screening details:

This study consists of two phases Phase 1b and Phase 2. Phase 1b: 12 subjects were enrolled and received the study treatment; Phase 2: 83 subjects were enrolled and received the study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1b: Cohort 1: Golvatinib 200 mg + Cetuximab 400 mg/m ²

Arm description:

Subjects with platinum-resistant SCCHN received golvatinib 200 milligram (mg) tablets, orally, once daily (run-in period) and cetuximab 400 milligram per square meter (mg/m²) intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles for determining MTD or RP2D, until the occurrence of progressive disease (PD), unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Golvatinib 200 mg
Investigational medicinal product code	
Other name	E7050
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received golvatinib 200 mg tablets, orally, once daily (run-in period) of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Investigational medicinal product name	Cetuximab 400 mg/m ²
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Arm title	Phase 1b: Cohort 2: Golvatinib 300 mg + Cetuximab 400 mg/m ²
------------------	---

Arm description:

Subjects with platinum-resistant SCCHN received golvatinib 300 mg tablets, orally, once daily (run-in period) and cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles for determining MTD or RP2D, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Golvatinib 300 mg
Investigational medicinal product code	
Other name	E7050
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received golvatinib 300 mg tablets, orally, once daily (run-in period) of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Investigational medicinal product name	Cetuximab 400 mg/m ²
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Arm title	Phase 1b: Cohort 3: Golvatinib 400 mg + Cetuximab 400 mg/m ²
------------------	---

Arm description:

Subjects with platinum-resistant SCCHN received golvatinib 400 mg tablets, orally, once daily (run-in period) and cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles for determining MTD or RP2D, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Cetuximab 400 mg/m ²
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Investigational medicinal product name	Golvatinib 400 mg
Investigational medicinal product code	
Other name	E7050
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received golvatinib 400 mg tablets, orally, once daily (run-in period) of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles.

Arm title	Phase 2: Arm 1: Golvatinib 400 mg + Cetuximab 400 mg/m ²
------------------	---

Arm description:

Subjects with platinum-resistant SCCHN received golvatinib 400 mg (RP2D) tablets, orally, once daily and cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles. After 6 cycles, at the discretion of the investigator, subjects who experienced clinical benefit could continue for as long as clinical benefit was sustained and the treatment was well tolerated, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Primary: Phase 2: Number of Subjects With Grade 3 or Higher Treatment-emergent Adverse Events (TEAEs)

End point title	Phase 2: Number of Subjects With Grade 3 or Higher Treatment-emergent Adverse Events (TEAEs) ^{[8][9]}
-----------------	--

End point description:

TEAEs are defined as an adverse event that has an onset date, or a worsening in severity from baseline (pre-golvatinib), on or after the first dose of golvatinib. The severity was graded according to CTCAE v4.0. Grade 1 Mild; asymptomatic or mild symptoms; clinical or diagnostic observations only; intervention not indicated. Grade 2 Moderate; minimal, local or noninvasive intervention indicated; limiting age-appropriate instrumental activities of daily living (ADL). Grade 3 Severe or medically significant but not immediately life-threatening; hospitalization or prolongation of hospitalization indicated; disabling; limiting self care ADL. Grade 4 Life-threatening consequences; urgent intervention indicated. Grade 5 Death related to adverse event. Safety population: all subjects enrolled and randomized to treatment in study, except for those who drop out of the study prior to receiving any study treatment, or were without any safety assessments following the first dose of study treatment.

End point type	Primary

Secondary: Phase 2: Progression-free Survival (PFS)

End point title	Phase 2: Progression-free Survival (PFS) ^[16]
-----------------	--

End point description:

PFS is defined as the time from the date of randomization until the earlier of the following two events: the date of PD or the date of death based on response evaluation criteria in solid tumor (RECIST) version 1.1. PD is defined as at least a 20 percent (%) increase or 5 millimeter (mm) increase in the sum of diameters of target lesions (taking as reference the smallest sum on study) recorded since the treatment started or the appearance of 1 or more new lesions. PFS was estimated and analyzed using Kaplan Meier method. Modified Intent-to-Treat (MITT) analysis set included all subjects randomized in the applicable study arm, except a subject who dropped out of such arm prior to receiving any comparator or study drug. As planned, data for this endpoint was analyzed and collected till primary completion date.

End point type	Secondary
----------------	-----------

End point timeframe:

From the date of randomization until the earlier of the following two events: the date of PD or the date of death (Up to approximately 4 years 4 months)

Notes:

[16] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only data from Phase 2 are included in this endpoint.

Reporting groups

Reporting group title	Phase 1b: Cohort 1: Golvatinib 200 mg + Cetuximab 400 mg/m ²
-----------------------	---

Reporting group description:

Subjects with platinum-resistant SCCHN received golvatinib 200 mg tablets, orally, once daily (run-in period) and cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles for determining MTD or RP2D, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Reporting group title	Phase 2: Arm 2: Cetuximab 400 mg/m ²
-----------------------	---

Reporting group description:

Subjects with platinum-resistant SCCHN received cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles. After 6 cycles, at the discretion of the Investigator, subjects who experienced clinical benefit could continue for as long as clinical benefit was sustained and the treatment was well tolerated, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

Reporting group title	Phase 2: Arm 1: Golvatinib 400 mg + Cetuximab 400 mg/m ²
-----------------------	---

Reporting group description:

Subjects with platinum-resistant SCCHN received golvatinib 400 mg (RP2D) tablets, orally, once daily and cetuximab 400 mg/m² intravenous infusion, once on Day 1 of Cycle 1, followed by cetuximab 250 mg/m² intravenous infusion, once on Days 8, 15 and 22 of Cycle 1 in a 28-days treatment cycle for up to 6 subsequent cycles. After 6 cycles, at the discretion of the investigator, subjects who experienced clinical benefit could continue for as long as clinical benefit was sustained and the treatment was well tolerated, until the occurrence of PD, unacceptable toxicity, withdrawal of consent, withdrawal by the investigator, lost to follow-up, or death, whichever occurred first.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 March 2011	Amendment 01: The maximum dose to be tested was changed from 360 mg to 400 mg (with additional information in the Introduction to justify the change). Additional PK sampling times were added. For subjects experiencing clinical benefit after six cycles, continuing treatment was changed from cetuximab with or without golvatinib to golvatinib with or without cetuximab or cetuximab alone, depending on original treatment arm. Revised procedure for crushing tablets. Changed time for radiological scans from every two cycles to every eight weeks for the first six cycles and then at least every 12 weeks thereafter. Added efficacy endpoints to be used for evaluation of the secondary objective. Added postdose PK samples for Day 8 and 15 of Cycle 1 and Day 1 of all subsequent cycles in Phase 1b. Added nonoptional predose PK trough samples to Day 1, Day 15, and Day 22 of Cycle 1 and Day 1 of all subsequent cycles of Phase 2. Added nonoptional predose blood sample to Day 1 of all cycles for cetuximab immunogenicity determination. Specified that subjects should arrive at clinic in a fasted state on days that PK samples were to be drawn. Added visit schedule modification for subjects continuing beyond Cycle 6. Added 4-week washout period from any previous anticancer therapy (Exclusion Criterion 4). Added active hemoptysis as an exclusion criterion. Allowed for intrasubject dose escalation of golvatinib in Phase 1b in consultation with the Medical Monitor and provided the next highest dose had been deemed tolerable. Changed frequency of pregnancy test in female subjects of childbearing potential. Clarified that if one agent was held for toxicity, the other agent may have been continued as long as toxicity for the second agent was not suspected. The role of the DSMC was clarified.
14 October 2011	Amendment 02: The Introduction was updated with new PK data. Changed the golvatinib sampling period from Day -7 through Day -4 of Cycle 1 in Phase 1b to Day -2 and -1 of Cycle 1. Removed serial PK sampling on Days 1 and 2 of Cycle 1 for both Phase 1b and the optional Phase 2 sampling. A "Rationale for the Current Study" subsection was added to the Introduction. Clarified that after discontinuation of study treatment, follow-up would be until death. Clarified treatment options for subjects continuing past Cycle 6. Clarified prior cetuximab treatment allowed in Phase 1b, only allowed in Phase 2 if administered in combination with radiotherapy. Changed to allow prior antiangiogenic therapy in Phase 1b. Clarified that subjects could take golvatinib with or without food and clarified for subjects on golvatinib who experienced nausea to take golvatinib with food and antiemetic therapy per local guidelines and Investigator practice. Updated the definition of SAEs to conform with new FDA guidelines.
17 September 2012	Amendment 03: Added disease progression to Section 4.4.3 "Patient Withdrawal". Clarified that for subjects participating in the optional PK sampling, the predose samples on Days 15 and 22 of Cycle 1 would serve as the nonoptional predose trough samples. Provided language clarifying the use of anti-emetics medication to Section 5.1.4 "Precautions". Provided guidance for treatment of subjects with elevated alkaline phosphatase to Section 5.1.4 "Precautions". Modified the cetuximab supply information. Moved the caution for subjects who were taking drugs that were strong or moderate inhibitors and/or inducers of cytochrome P450 3A4 from excluded medications to allowed medications. Clarified that progression of disease would not be considered an AE or SAE. Clarified that if iodinated CT contrast was contraindicated, CT of the chest may have been performed without IV contrast.
05 November 2014	Amendment 04: Removed the long-term overall survival follow-up. Revised language requiring central reading of radiological scans. Revised language regarding scans after the first 6 treatment cycles. After the first 6 treatment cycles, radiological scans will be in accordance with local institutional guidelines.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No pharmacokinetic analysis was conducted in this study due to incomplete pharmacokinetic sample bioanalysis due to unresolved queries leading to inadequate calculations and limited data interpretability.
--

Notes:
